- Previous class:
- Color vectors - RGB
- I-dimensional array - vector
- Now:
- Play with sound files
- (more vectors!)

Sampling rate affects the quality

If sampling is not frequent enough, then the discretized sound will not capture the essence of the continuous sound...

## Computing with sound requires digitization

- Sound is continuous; capture its essence by sampling - Digitized sound is a vector of numbers

Digital

## Sampling Rate

Given human perception, 20000 samples/second is pretty good $(20000 \mathrm{~Hz}$ or 20 kHz$)$

| $8,000 \mathrm{~Hz}$ | required for speech over the <br> telephone |
| :--- | :--- |
| $44,100 \mathrm{~Hz}$ | required for audio CD |
| $192,400 \mathrm{~Hz}$ | required for HD-DVD <br> audio tracks |

            telephone
            audio tracks
    A wav file is for the computer to processsoftware is required to play the sound.

Computing with sound in Matlab requires that we first convert the wav format data into simple numeric data-the job of wavread.

16-bit used when very high quality is required.

## Subvectors

- Can access just part of a vector, or subvector
- Suppose you have a vector v:
- $v(\mathrm{I})$ - value in $I^{\text {st }}$ cell
- $v(k)$ - value in $k^{\text {th }}$ cell for valid $k$
- $v(2: 5)$ - the $2^{\text {nd }}$ thru $5^{\text {th }}$ values in $v$, as a vector
- length(v) - how many cells in vector $v$
- $\mathrm{v}(\mathrm{I}:$ length $(\mathrm{v}))$ - all the values in v

## wavread

[y, rate, nBits]= wavread('austin.wav'); n = length(y);

```
n =
            54453
rate =
            11025
nBits =
    8
```

austin.wav
encoded the
sound with 54,453
8 -bit numbers that were gathered over a span of about $54453 / 11025$ secs

## Building a vector

Concatenate two vectors to make one...
$\mathrm{v}=$ ones $(1,3)$; \% a row of length 3
$\mathrm{w}=[4 ; 7]$ \% a column of length 2
$\mathrm{x}=\left[\mathrm{w} ; \mathrm{v}{ }^{\prime}\right]$; a column of length 5
Concatenate vectors repeatedly...
a= [];
for $k=1: 4$
$a=[a$ ones $(1,2)]$;
end
\% What is a?
