# Lecture 04 <br> Arrays, For Loop, Nested Loops 

Erdal Yilmaz

## Cornell University

July 3, 2013

## Before we begin

HW1 Questions
OH Thursday, Friday

## Arrays

Array
A variable to hold multiple values of the same type.

Example

$$
\begin{aligned}
& \mathrm{x}=[1,2,3,4,5,6,7] ; \\
& \mathrm{y}=[\text { 'a', 'b' ' 'c']; } \\
& \mathrm{z}=\text { 'abc'; }
\end{aligned}
$$

## Arrays - Indexing

Indexing
Specifying an element of an array by providing its location.
Example

```
a = [2, 3, 5, 7, 11, 13];
a(1) % 2
a(2) % 3
a(3) % 5
a(6) % 13
S = 'Cornell'
s(1) % 'C'
s(4) % 'n'
```

## Operations with Arrays

Array opertors
.^ elementwise power raising
.* elementwise multiplication
./ elementwise division

Example

$$
\begin{aligned}
& a=\left[\begin{array}{llll}
2 & 3 & 4 & 5
\end{array}\right] ; \\
& \mathrm{b}=\left[\begin{array}{llll}
1 & 2 & 4 & 3
\end{array}\right] ; \\
& \mathrm{c}=\mathrm{a} . * \mathrm{~b} \text {; } \% \mathrm{c} \text { is }\left[\begin{array}{cccc}
2 & 6 & 16 & 15
\end{array}\right] \\
& d=a . \wedge b ; ~ \% ~ i s ~\left[\begin{array}{ll}
2 & 9 \\
256 & 125
\end{array}\right] \\
& \mathrm{e}=\mathrm{a} . / \mathrm{b} \text {; } \% \mathrm{e} \text { is }\left[\begin{array}{lll}
2 & 1.5 & 1 \\
1.6667
\end{array}\right] \\
& \mathrm{f}=\mathrm{a}+\mathrm{b} \text {; } \% \mathrm{f} \text { is }\left[\begin{array}{lll}
3 & 5 & 8
\end{array}\right]
\end{aligned}
$$

## Colon (:) Notation

Colon (:)
creates a sequence of numbers with constants steps

Example

```
1:6
% [[1 2 [ 3 4 4 5 6]
1:2:6
% [llll
6:-2:1
% [[6 4 2]
'a':'e'
% 'abcde'
'e':2:'k'
% 'egik'
```

## Indexing with Colon

Parts of an array can be extracted by indexing with colon notation.

## Example

$$
\begin{aligned}
& a=[2,3,5,7,11,13] \text {; } \\
& a(1: 2) \quad \%[2,3] \\
& a(1: 2: 5) \quad \%[2,5,11] \\
& \text { a }(6:-3: 1) \%[13,5] \\
& \text { a (1:3:end) } \%[2,7] \\
& \text { a (2: end-1) } \%[3,5,7,11]
\end{aligned}
$$

## New Loop

for
iterates over a range of values

Usage

```
for %<variable> = <range>
    %<loop body>
end
```

## for - Examples

## Example

```
% This will display values of x
% at every iteration from 1 to 5
for x = 1:5
    x
end
```

## for - Examples

## Example

$$
\begin{aligned}
& \% \text { Sum integers from } 1 \text { to } 100 \\
& s=0 ; \\
& \text { for } j=1: 100 \\
& \qquad s=s+j ; \\
& \text { end } \\
& \text { fprintf('1+..+100=\%d\n',s); }
\end{aligned}
$$

## Nested Loops

Nested loops
are loops within loops
Example

```
for %<var1> = <range1>
    for %<var2> = <range2>
        % . . . .
    end
end
```

## More Nested

## Example

```
while %<condition1>
    while %<condition2>
    end
    end
```
