

Lecture 24

Controllers and Object Oriented Design

Announcements for This Lecture

Assignments

- A6 due midnight **TONIGHT**
 - Last day for consultants
 - Also, fill out survey
- A7 due **Wednesday, Dec. 10**
 - Instructions posted today
 - Focus of today's lecture
 - 3 weeks including T-Day
 - 2.5 weeks without the break
- Both are **very important**
 - Each worth 8% of grade

Next Week

- There is no lab next week
 - But Tuesday hours are open
 - Open to **EVERYONE**
 - Go for help on lab or A7
- But lecture is **important**
 - Continue Tuesday's topic
 - Setting us up for sorting
- Try to finish lab 12 first
 - Not due, but helps lecture

Test Assessment Report

This was a triumph.
I'm making a note here:
HUGE SUCCESS.
It's hard to overstate
my satisfaction.
Aperture Science
We do what we must
because we can.
For the good of all of us.
Except the ones who are dead.

But there's no sense crying
over every mistake.
You just keep on trying
till you run out of cake.
And the Science gets done.
And you make a neat gun.
For the people who are
still alive.

Challenge: Breaking Up Software

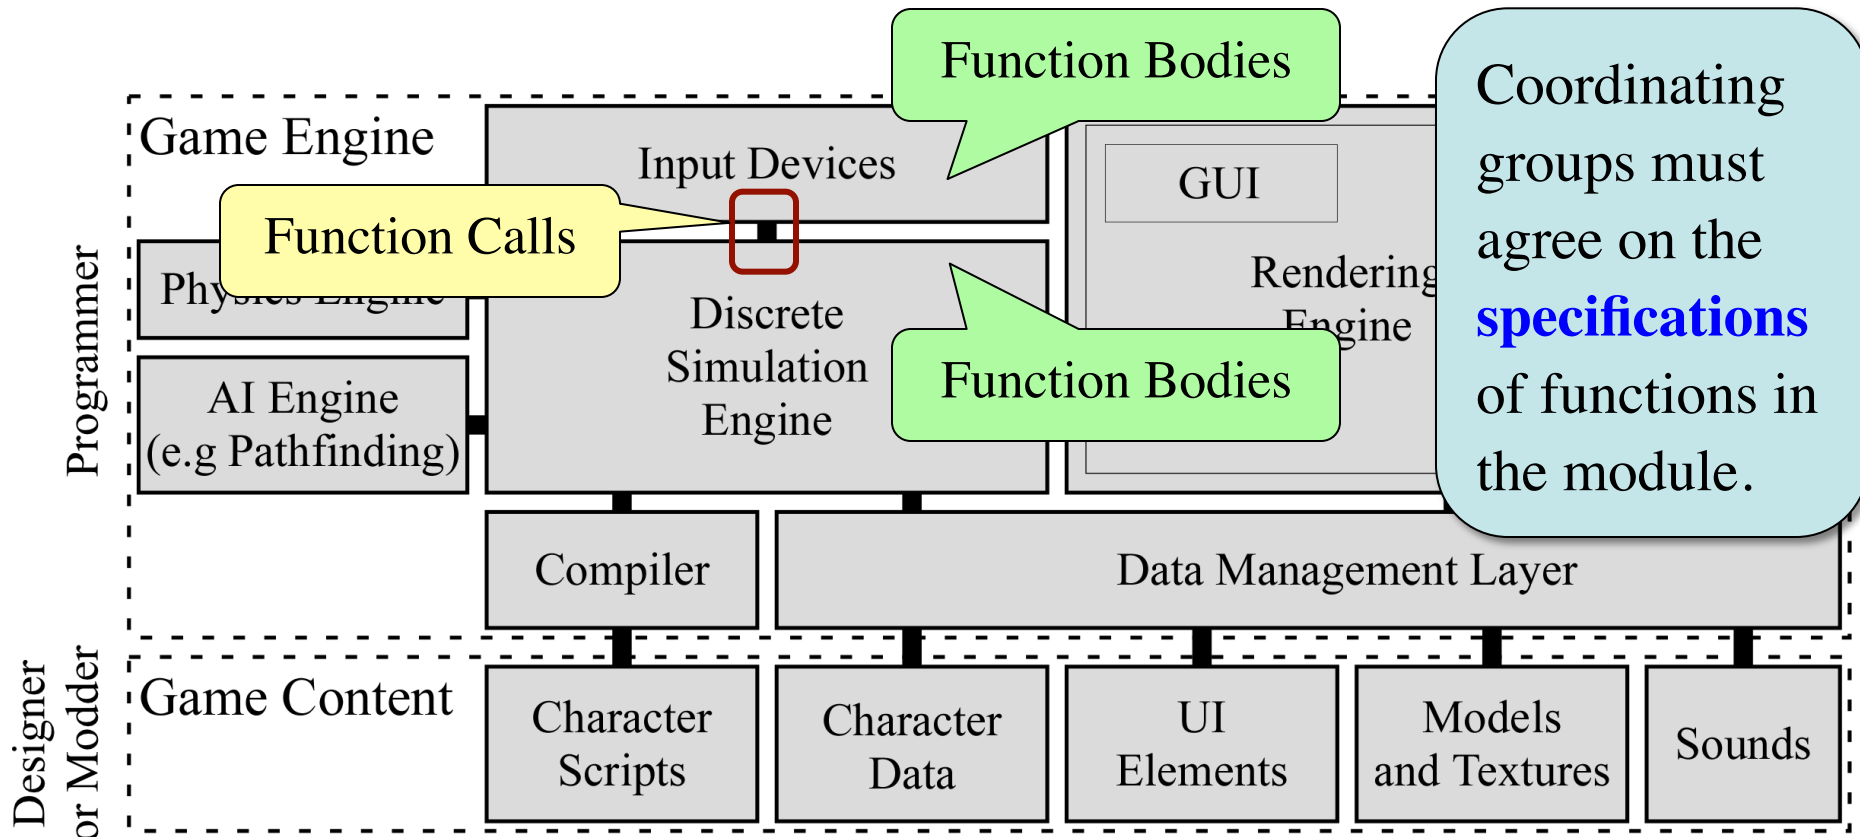

Challenge: Breaking Up Software

Challenge: Breaking Up Software

Challenge: Breaking Up Software

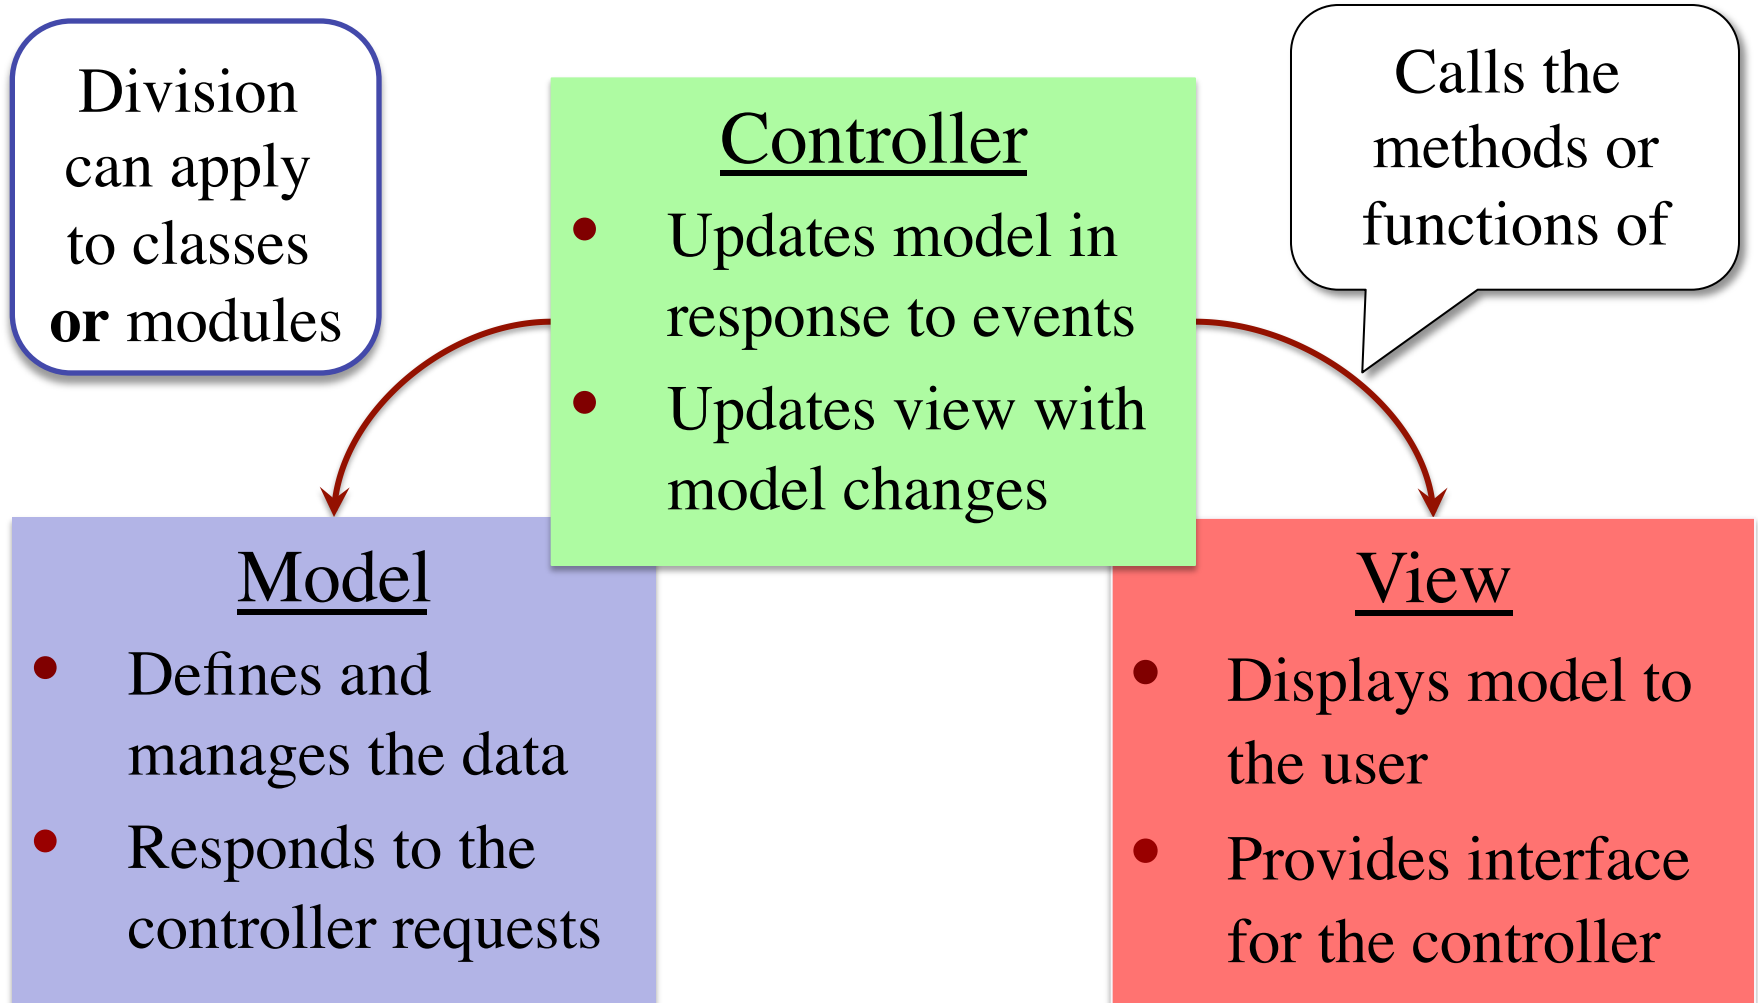

Software Patterns

- **Pattern:** reusable solution to a common problem
 - Template, not a single program
 - Tells you how to design your code
 - Made by someone who ran into problem first
- In many cases, a pattern gives you the **interface**
 - List of headers for non-hidden methods
 - Specification for non-hidden methods
 - Only thing missing is the implementation

Just like
this course!

Model-View-Controller Pattern

MVC in this Course

Model

- **A3**: Color classes
 - RGB, CMYK & HSV
- **A6**: Database, Cluster
 - Data is always in model
- **A7**: Ball, Brick, etc..
 - All shapes/geometry

Controller

- **A3**: a3app.py
 - Hidden classes
- **A6**: ClusterGroup
 - Also visualizer
- **A7**: Breakout
 - Controller class for you!

MVC in Previous Semesters

Model

- **A3**: Color classes
 - RGB, CMYK & HSV
- **A4**: Turtle, Pen
 - Window is **View**
- **A6**: Database, Cluster
 - Data is always in model
- **A7**: Ball, Brick, etc..
 - All shapes/geometry

Controller

- **A3**: a3app.py
 - Hidden classes
- **A4**: Functions in a4.py
 - No need for classes
- **A6**: ClusterGroup
 - Also visualizer
- **A7**: Breakout
 - Controller class for you!

MVC in Previous Semesters

Model

- **A3**: Color classes
 - RGB, CMYK & HSV
- **A4**: Turtle, Pen
 - Window is **View**
- **A5**: Why **classes** sometimes and **functions** others?
- **A7**: Ball, Brick, etc..
 - All shapes/geometry

Controller

- **A3**: a3app.py
 - Hidden classes
- **A4**: Functions in a4.py
 - No need for classes
- **A6**: ClusterGroup
 - Also visualizer
- **A7**: Breakout
 - Controller class for you!

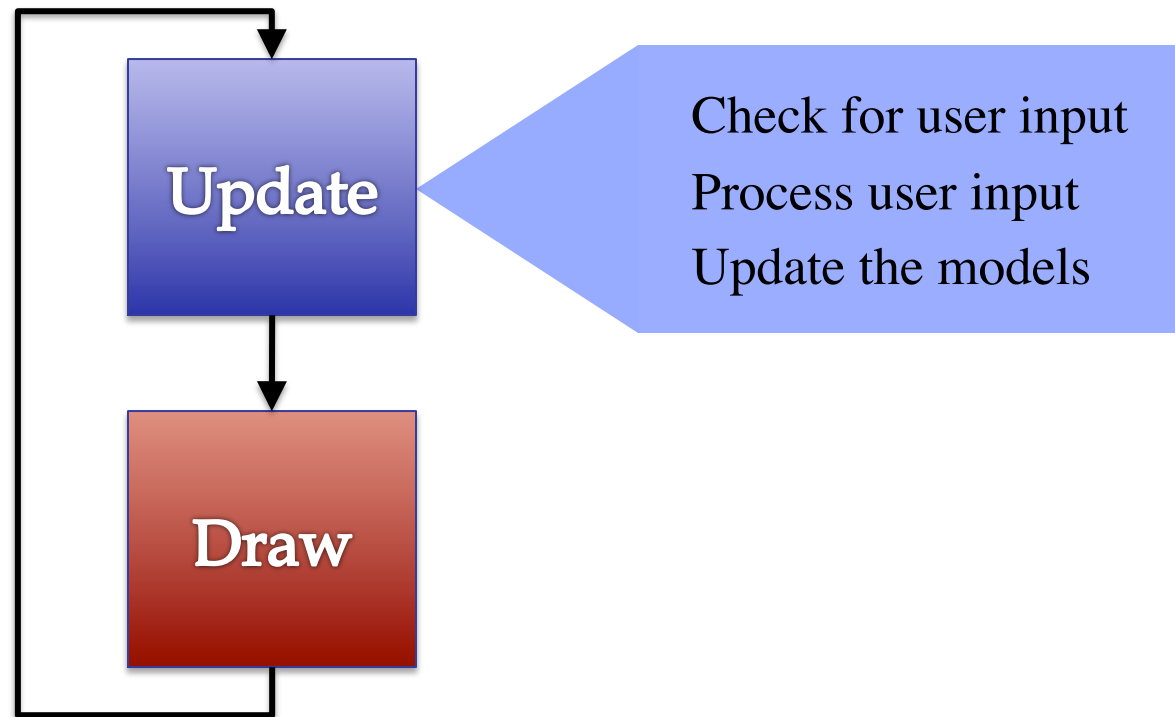

A Standard GUI Application

Animates the application,
like a movie

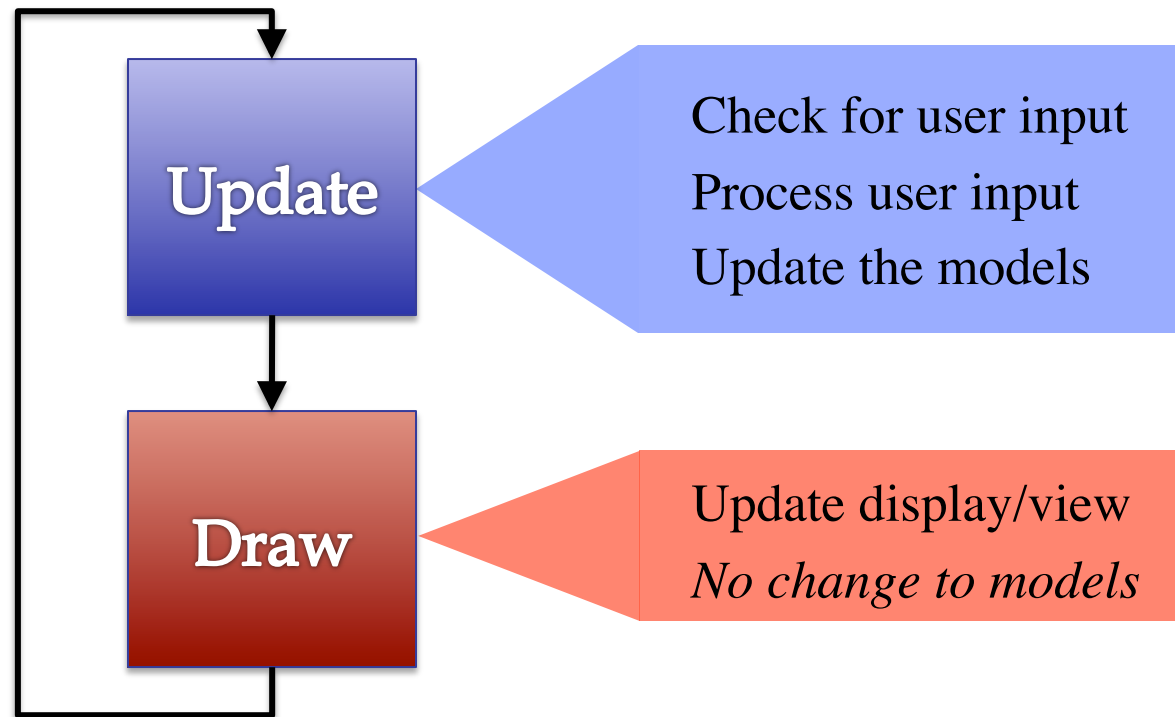

A Standard GUI Application

Animates the application,

A Standard GUI Application

Must We Write this Loop Each Time?

```
while program_is_running:
```

```
    # Get information from mouse/keyboard
```

```
    # Handled by OS/GUI libraries
```

```
    # Your code goes here
```

```
    # Draw stuff on the screen
```

```
    # Handled by OS/GUI libraries
```

Must We Write this Loop Each Time?

`while program_is_running:`

`# Get information from mouse/keyboard`

`# Handled by OS/GUI libraries`

`# Your code goes here`

`# Draw stuff on the screen`

`# Handled by OS/GUI libraries`

Would like to
“plug in” code

Why do we need to
write this each time?

Must We Write this Loop Each Time?

`while program_is_running:`

`# Get information from mouse/keyboard`

`# Handled by OS/GUI libraries`

`# Your code goes here`

Method call
(for loop body)

`controller.update()`

Controller object on the screen

`# Handled by OS/GUI libraries`

- Write loop body in a controller.
- OS/GUI handles everything else.

Loop Invariants Revisited

Normal Loops

```
x = 0
```

```
i = 2
```

```
# x = sum of squares of 2..i
```

```
while i <= 5:
```

```
    x = x + i*i
```

```
    i = i + 1
```

```
# x = sum of squares of 2..5
```

Properties of
“external” vars

Controller

What are the
“external” vars?

```
while program_running:
```

```
    # Get input
```

```
    # Your code called here
```

```
    controller.update()
```

```
    # Draw
```

Loop Invariants Revisited

Normal Loops

```
x = 0
```

```
i = 2
```

```
# x = sum of squares of 2..i
```

```
while i <= 5:
```

```
    x = x + i*i
```

```
    i = i + 1
```

```
# x = sum of squares of 2..5
```

Properties of
“external” vars

Controller

What are the
“external” vars?

```
while program_running:
```

```
    # Get input
```

```
    # Your code called here
```

```
    controller.update()
```

```
    # Draw
```

controller is an object.
It will have **attributes!**

Model-View-Controller in CS 1110

Attribute Invariants = Loop Invariants

- Attributes are a way to store value between calls
 - Not part of call frame
 - Variables outside loop
- A controller needs
 - Loop attributes
 - Initialization method (for loop, not `__init__`)
 - Method for body of loop
- Attribute descriptions, invariants are important

```
game = Game(...) #constructor
...
game.init() #Loop initialization
# inv: game attributes are ...
while program_running:
    # Get input
    # Your code goes here
    game.update(time_elapsed)
    game.draw()
# post: game attributes are ...
```

Example: Animation

```
class Animation(GameApp):  
    """Application to an ellipse in a circle."""
```

See [animation.py](#)

```
    def init(self):  
        """Special loop initialization method."""
```

```
    ...
```

```
    def update(self,dt):  
        """Change the ellipse position."""
```

```
    ...
```

```
    def draw(self):  
        """Draw the ellipse"""
```

```
    ...
```

Loop initialization
Do NOT use `__init__`

Loop body

Use method `draw()`
defined in `GObject`

Example: Animation

```
class Animation(GameApp):
```

See animation.py

```
    """Application to an ellipse"""
```

Parent class that
does hard stuff

```
    def init(self):
```

```
        """Special loop initialization method."""
```

```
        ...
```

Loop initialization
Do NOT use `__init__`

```
    def update(self,dt):
```

```
        """Change the ellipse position."""
```

```
        ...
```

Loop body

```
    def draw(self):
```

```
        """Draw the ellipse"""
```

```
        ...
```

Use method `draw()`
defined in `GObject`

What Attributes to Keep: Touch

- Attribute `touch` in `GView`
 - The mouse press position
 - Or `None` if not pressed
 - Use `self.view.touch` inside controller (`Game`) methods
- Compare `touch`, `last` position
 - `last` `None`, `touch` not `None`:
Mouse button **pressed**
 - `last` not `None`, `touch` `None`:
Mouse button **released**
 - `last` and `touch` not `None`:
Mouse **dragged** (button down)

More Attributes: Checking Click Types

- Double click = 2 fast clicks
- Count number of fast clicks
 - Add an attribute `clicks`
 - Reset to 0 if not fast enough
- Time click speed
 - Add an attribute `time`
 - Set to 0 when mouse released
 - Increment when not pressed (e.g. in loop method `update()`)
 - Check time when next pressed

See [touch.py](#)

State: Changing What the Loop Does

- **State:** Current loop activity
 - Playing game vs. pausing
 - Ball countdown vs. serve
- Add an attribute **state**
 - Method `update()` checks state
 - Executes correct helper
- How do we store state?
 - State is an *enumeration*;
one of several fixed values
 - Implemented as an int
 - Global **constants** are values

State **ANIMATE_CIRCLE**

State **ANIMATE_HORIZONTAL**

See `state.py`

State: Changing What the Loop Does

- **State:** Current loop activity
 - Playing game vs. pausing
 - Ball countdown vs. serve
- Add an attribute **state**
 - Method `update()` checks state
 - Executes correct helper
- How do we store state?
 - State is an *enumeration*;
one of several fixed values
 - Implemented as an int
 - Global **constants** are values

State **ANIMATE_CIRCLE**

State **ANIMATE_HORIZONTAL**

Importance of
class invariants

e.py

Types of Models for Assignment 7

- Often subclass of GObject
 - Has built-in draw method
 - See documentation in A6
- Includes groups of models
 - **Example:** rockets in pyro.py
 - Each rocket is a model
 - But so is the entire list!
 - update() will change both
- **A7:** Several model classes
 - Ball to animate the ball
 - BrickWall to manage bricks

See pyro.py
