

## Sequences: Lists of Values

### String

- `s = 'abcd'`  

0	1	2	3	4
a	b	c	d	
- Put characters in quotes
  - Use `\` for quote character
- Access characters with `[]`
  - `s[0]` is 'a'
  - `s[5]` **causes an error**
  - `s[0:2]` is 'ab' (excludes 0)
  - `s[2:]` is 'cd'

### List

- `x = [5, 6, 5, 9, 15, 23]`  

0	1	2	3	4	5
5	6	5	9	15	23
- Put values inside `[]`
  - Separate by commas
- Access **values** with `[]`
  - `x[0]` is 5
  - `x[6]` **causes an error**
  - `x[0:2]` is [5, 6] (excludes 2<sup>nd</sup> 5)
  - `x[3:]` is [9, 15, 23]

## Lists Have Methods Similar to String

`x = [5, 6, 5, 9, 15, 23]`

- `index(value)`
  - Return position of the value
  - **ERROR** if value is not there
  - `x.index(9)` evaluates to 3
- `count(value)`
  - Returns number of times value appears in list
  - `x.count(5)` evaluates to 2

But you get length of a list with a regular function, not method:  
`len(x)`

## Representing Lists

### Wrong

### Correct

## Lists vs. Class Objects

### List

### RGB

## When Do We Need to Draw a Folder?

- When the value **contains** other values
  - This is essentially what we mean by 'object'
- When the value is **mutable**

Type	Container?	Mutable?
int	No	No
float	No	No
str	Yes*	No
Point	Yes	Yes
RGB	Yes	Yes
<b>list</b>	Yes	Yes

## Lists are Mutable

- **List assignment:**
    - `<var>[<index>] = <value>`
    - Reassign at index
    - Affects folder contents
    - Variable is unchanged
  - `x = [5, 7, 4, -2]`  

0	1	2	3
5	7	4	-2
8			
  - `x[1] = 8`
  - Strings cannot do this
    - `s = 'Hello World!'`
    - `s[0] = 'J'` **ERROR**
    - String are **immutable**
-

### List Methods Can Alter the List

`x = [5, 6, 5, 9]`

See Python API for more

- `append(value)`
  - A **procedure method**, not a fruitful method
  - Adds a new value to the end of list
  - `x.append(-1)` *changes* the list to `[5, 6, 5, 9, -1]`
- `insert(index, value)`
  - Put the value into list at index; shift rest of list right
  - `x.insert(2,-1)` changes the list to `[5, 6, -1, 5, 9,]`
- `sort()` What do you think this does?

### Lists and Functions: Swap

```
def swap(b, h, k):
    """Procedure swaps b[h] and b[k] in b
    Precondition: b is a mutable list, h
    and k are valid positions in the list"""
    1 temp= b[h]
    2 b[h]= b[k]
    3 b[k]= temp
```

`swap(x, 3, 4)`

Swaps `b[h]` and `b[k]`, because parameter `b` contains name of list.

### List Slices Make Copies

`x = [5, 6, 5, 9]`      `y = x[1:3]`

### Exercise Time

- Execute the following:
 

```
>>> x = [5, 6, 5, 9, 10]
>>> x[3] = -1
>>> x.insert(1,2)
```
- Execute the following:
 

```
>>> x = [5, 6, 5, 9, 10]
>>> y = x[1:]
>>> y[0] = 7
```
- What is `x[4]`?
- What is `x[1]`?

### Lists and Expressions

- List brackets `[]` can contain expressions
- This is a list **expression**
  - Python must evaluate it
  - Evaluates each expression
  - Puts the value in the list
- Example:
 

```
>>> a = [1+2,3+4,5+6]
>>> a
[3, 7, 11]
```
- Execute the following:
 

```
>>> a = 5
>>> b = 7
>>> x = [a, b, a+b]
```
- What is `x[2]`?
 

A: 'a+b'  
 B: 12  
 C: 57  
 D: **ERROR**  
 E: I don't know

### Lists of Objects

- List positions are variables
  - Can store base types
  - But cannot store folders
  - Can store folder identifiers
- Folders linking to folders
  - Top folder for the list
  - Other folders for contents
- Example:
 

```
>>> r = oo.lmmodel.RED
>>> b = oo.lmmodel.BLUE
>>> g = oo.lmmodel.GREEN
>>> x = [r,b,g]
```
