## 13B. Loops and Lists

## Topics:

Functions that return more than 1 thing Nested Loops
Map

Same Problem:
What's the Biggest Number in This Table?

Which two cities are furthest apart and what is their separation?

## Computing the Diameter of a

 Cloud of Points

500 Points. Which two are furthest apart and what is their separation?

## It Will Have Three Functions

MakeCloud (n,sigma)
This generates two lists $x$ and $y$ that define the coordinates of the points in the cloud.

Diameter ( $\mathbf{x}, \mathrm{y}$ )
This will compute the diameter of the cloud using the $(x, y)$ coordinates of its points.

ShowCloud ( $\mathrm{x}, \mathrm{y}$ )
This will use SimpleGraphics to display the cloud and highlight the "diameter points".

## The Function MakeCloud

```
from random import normalvariate as randn
def MakeCloud(n,sigma):
    x=[]
    y=[]
    for k in range(n):
        The normal distribution
    r = randn (0,sigma)
        x.append (r)
        r = randn (0,sigma)
        y.append (r)
    return (x,y)
```

## MakeCloud Returns Two Lists

from random import normalvariate as randn
def MakeCloud(n, sigma) :

| $\begin{aligned} & \mathbf{x}=[] \\ & \mathbf{y}=[] \end{aligned}$ | New Feature |
| :---: | :---: |
| for $k$ in range ( n ) : | A functi |
| $r=$ randn (0, sigma) | that returns |
| $x$. append ( r ) | more than |
| $r=$ randn (0, sigma) | one thing. |
| y. append (r) | Note |

## MakeCloud Returns Two Lists

```
>>> (x,y) = MakeCloud(3,1)
```

>>> print $x$
>>> print $y$

## $[-2.328,-0.044,-0.241]$

[ 2.737, 2.078, -1.272]

Note the parentheses

## MakeCloud

from random import normalvariate as randn Old Stuff
def MakeCloud ( $n$, sigma) :

| $x=[]$ $x$ and $y$ start <br> out as empty  |  |
| :--- | :--- |
| $y=[]$ | lists. |

for $k$ in range ( n ):
lists.
$r=r a n d n(0$, sigma $)$
Repeatedly
$x$. append ( $r$ )
$r=\operatorname{randn}(0$, sigma $)$
y . append ( r )
return $X, Y$ generate a random number and append to $x$ Ditto fory

The Diameter Function: What It Computes

Input: lists $x$ and $y$ that define the yellow dots

## Diameter: Formal Specs

## def Diameter (x,y):

""" Returns (d,imax,jmax) where d is a float that is the diameter of a cloud of points defined by lists $x$ and $y$. imax and
jmax are ints that are the indices of the diameter points.

The diameter of a cloud of points is the maximum distance between any two points in the cloud. The two points for which this occurs are called diameter points.

PreC: $x$ and $y$ are lists of floats with the same length.

## Diameter: The Implementation

```
def Diameter(x,y):
    d = 0
    n = len(x)
    for i in range(n):
        for j in range(n):
            dx = x[i]-x[j]
            dy = y[i]-y[j]
            dij = sqrt(dx**2+dy**2)
            if dij>d:
                d = dij
                imax = i
                jmax = j
    return (d,imax,jmax)
New Feature
Nested Loops
return (d,imax,jmax)
```

## Nested Loops

In this situation we have a loop whose body contains a loop
for blahblahblah

and $\square$ contains a loop.

Nested Loops: A Simple Example
for $i$ in range (2):
for $j$ in range(3):
print i,j
print 'Inner'
print 'Outer'

Nested Loops: A Simple Example
for $i$ in range (2):
for $j$ in range (3):
print i,j
print 'Inner'
print 'Outer'

Execute the loop body with $\mathrm{i}=0$

Nested Loops: A Simple Example
for $i$ in range (2):
for $j$ in range (3):
print i,j
print 'Inner'
print 'Outer'

Execute the loop body with i=0

## Nested Loops: A Simple Example

for $i$ in range (2):
for $j$ in range(3): print $i, j$
print 'Inner'
print 'Outer'

Execute the loop body with i=1

Nested Loops: A Simple Example
for $i$ in range (2):
for $j$ in range(3):
print $i, j$
print 'Inner'
print 'Outer'

Execute the loop body with i=1

0
$\begin{array}{ll}0 & 1\end{array}$ $\begin{array}{ll}0 & 1 \\ & 2\end{array}$ Inner 10 $\begin{array}{ll}1 & 1 \\ 1 & 2\end{array}$ Inner

Nested Loops: A Simple Example
for $i$ in range (2):
for $j$ in range (3):
print i,j
print 'Inner'
print 'Outer'

Go to the next statement after the loop body.

| 0 | 0 |
| :--- | :--- |
| 0 | 1 |
| 0 | 2 |
| Inner |  |
| 1 | 0 |
| 1 | 1 |
| 1 | 2 |
| Inner |  |

Nested Loops: A Simple Example
for $i$ in range(2):
for $j$ in range(3):
print i,j
print 'Inner'
print 'Outer'

Go to the next statement after the loop body.

## statement after

## Back to Diameter

When developing nested-loop solutions, it is essential to apply the methodology of step-w ise refinement, perhaps preceded by a small example

Aspects of our problem

- Must check all possible pairs of points.
- Look at their separation distance
- What's the largest among these distances?

## Suppose There Are 3 points

| From | To | Dist |
| :---: | :---: | :---: |
| $----1)$ | $(x[0],[y[0])$ | $(x[0], y[0])$ |
| $(x[0],[y[0])$ | $(x[1], y[1])$ | 7 |
| $(x[0],[y[0])$ | $(x[2], y[2])$ | 9 |
| $(x[1],[y[1])$ | $(x[0], y[0])$ | 7 |
| $(x[1],[y[1])$ | $(x[1], y[1])$ | 0 |
| $(x[1],[y[1])$ | $(x[2], y[2])$ | 10 |
| $(x[2],[y[2])$ | $(x[0], y[0])$ | 9 |
| $(x[2],[y[2])$ | $(x[1], y[1])$ | 10 |
| $(x[2],[y[2])$ | $(x[2], y[2])$ | 0 |

Number of possibilities.: $9=3 \times 3$

## And now, stepwise refinement

 in action....
## Suppose There Are 3 points

| From | To | Dist |
| :---: | :---: | :---: |
| $----=-1$ | $(x[0], y[0])$ | 0 |
| $(x[0],[y[0])$ | $(x[1], y[1])$ | 7 |
| $(x[0],[y[0])$ | $(x[2], y[2])$ | 9 |
| $(x[0],[y[0])$ | $(x[0], y[0])$ | 7 |
| $(x[1],[y[1])$ | $(x[1], y[1])$ | 0 |
| $(x[1],[y[1])$ | $(x[2], y[2])$ | 10 |
| $(x[1],[y[1])$ | $(x[0], y[0])$ | 9 |
| $(x[2],[y[2])$ | $(x[1], y[1])$ | 10 |
| $(x[2],[y[2])$ | $(x[2], y[2])$ | 0 |
| $(x[2],[y[2])$ |  |  |

Number of possibilities.: $9=3 \times 3$

First Solution

```
d = 0
n = len(x)
for i in range(n):
    # Examine the distance from
    # (x[i],y[i]) to every other point
```

## Second Solution

```
d = 0
n = len(x)
for i in range(n):
    for j in range(n):
        # Examine the distance from
        # (x[i],y[i]) to (x[j],y[j])
```

Fourth Solution

```
d = 0
n = len(x)
for i in range(n):
    for j in range(n):
            dx = x[i]-x[j]
            dy = y[i]-y[j]
            dij = sqrt(dx**2+dy**2)
            if dij>d:
                d = dij
                    imax = i
                jmax = j
    return (d,imax,jmax)
```

## Next Up: ShowCloud

## Third Solution

```
```

d = 0

```
```

d = 0
n = len(x)
n = len(x)
for i in range(n):
for i in range(n):
for j in range(n):
for j in range(n):
dx = x[i]-x[j]
dx = x[i]-x[j]
dy = y[i]-y[j]
dy = y[i]-y[j]
dij = sqrt(dx**2+dy**2)
dij = sqrt(dx**2+dy**2)
\# Compare dij to d revising
\# Compare dij to d revising
\# the latter if necessary

```
    # the latter if necessary
```

```
    # Compare dij to d revising
```

```
    # Compare dij to d revising
```

## Fourth Solution

```
d = 0
n = len(x)
for i in range(n):
```

    for \(j\) in range( \(n\) ):
            \(\mathrm{dx}=\mathrm{x}[\mathrm{i}]-\mathrm{x}[\mathrm{j}]\)
            \(d y=y[i]-y[j]\)
            dij \(=\) sqrt(dx**2+dy**2)
            if dij>d:
                \(\mathrm{d}=\mathrm{dij} \quad\) We have to
                imax \(=\mathrm{i} \longleftarrow\) "remember"
                \(j \max =j \longleftarrow\) where the max
    return (d,imax,jmax) separation occurs. "remember" where the max

## ShowCloud: Specs

def ShowCloud (x,y):
""" Displays a point cloud defined by $x$ and $y$ and highlights the two points that define its diameter.

PreC: $x$ and $y$ are lists of floats with the same length. """

First: How Big a Window?

Idea: look at the $x$ and $y$ coordinates of the points and see how big they can be.

## Map: Apply a Function to Each Element in a List

Example. Apply the floor function to every list element:
>>> $x=[11.3,12.4,15.0]$
>>> $x=$ map (math.floor, $x$ )
>>> print x
[11.0,12.0,15.0]

## Map: Formal Syntax

The name of a function that returns a value. Every element in the list must satisfy its precondition.

The name of a list.

## Map: Apply a Function to Each Element in a List

Example. Apply the absolute value function to everylist element

```
>>> x = [10,-20,-40]
>>> x = map (abs,x)
>>> print x
[10,20,40]
```

## Map: Apply a Function to Each Element in a List

This:

$$
y=[]
$$

for $k$ in range(len( $x$ )):
y .append (math.sqrt(x([k]))
Is equivalent to this:
$y=\operatorname{map}($ math.sqrt, $x)$

Assuming that $x$ is an initialized list of nonnegative numbers

First: How Big a Window?
$x$ Max $=\max (\operatorname{map}(\operatorname{abs}, x))$
$y_{\text {Max }}=\max (\operatorname{map}(a b s, y))$
$\mathrm{M}=\max (\mathrm{xMax}, \mathrm{yMax})$
MakeWindow(1.1*M,bgcolor=BLACK)

```
x = [-19,12,-4]
max(map(abs,x))
>>> 19
```

Next, Use DrawDisk For Each Point

```
r = M/50;
(d,i,j) = Diameter (x,y)
for k in range(len (x)):
    if k==i or k==j:
        DrawDisk(x[k],y[k],2*r,FillColor=CYAN)
        DrawDisk(x[k],y[k],r, FillColor=YELLOW)
```

$i$ and $j$ are the indices of the diameter points.
Before they are displayed, we paint a larger cyan dot.
