How to Succeed in CS1115

First

Download the *Insight Through Computing* Matlab examples.

Play with them and work the "M" problems.

Learn by example..

Second

Before lecture/lab, browse through the relevant pages of *Insight Through Computing* and on-line materials.

Anticipate what is going to be covered.

Third

Capture lecture/lab high points by taking notes. Review relevant online slides <u>that day</u>.

This is the basic way to keep up.

Fourth

Download the lecture/lab Matlab examples and <u>play</u> with them.

Reason: A good way to explore new syntax and problem-solving strategies.

Always Keep this in Mind…

It is much easier to understand a completed working program than to develop one from scratch.

Practice writing code from scratch at every opportunity.
