

## Class ArrayList

An instance contains a list of objects.

ArrayList is in package `java.util`.

## Class ArrayList

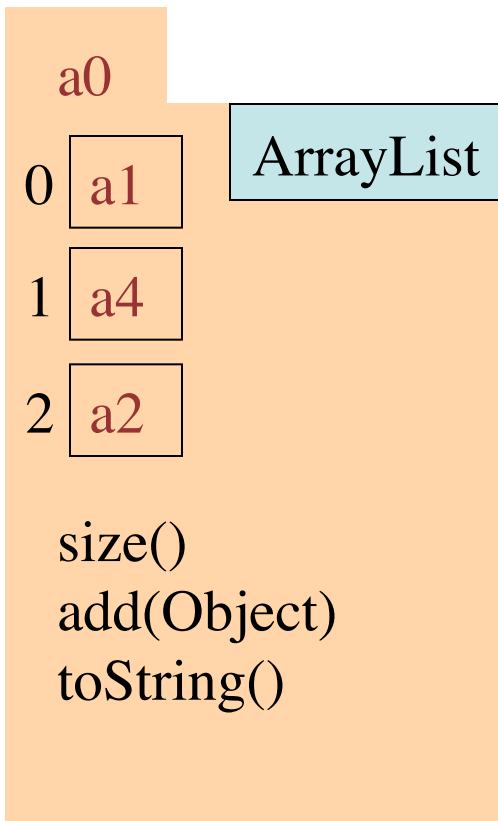

An instance contains a list of objects.

ArrayList is in package java.util.

## Adding objects to an ArrayList

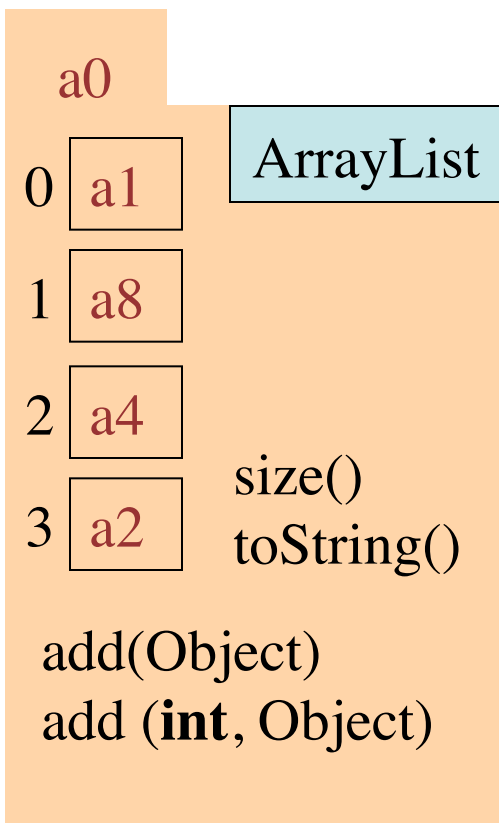

When first created, the size of the list is 0.

`b.size()` = the number of objects in the list.

ArrayList is in package `java.util`.

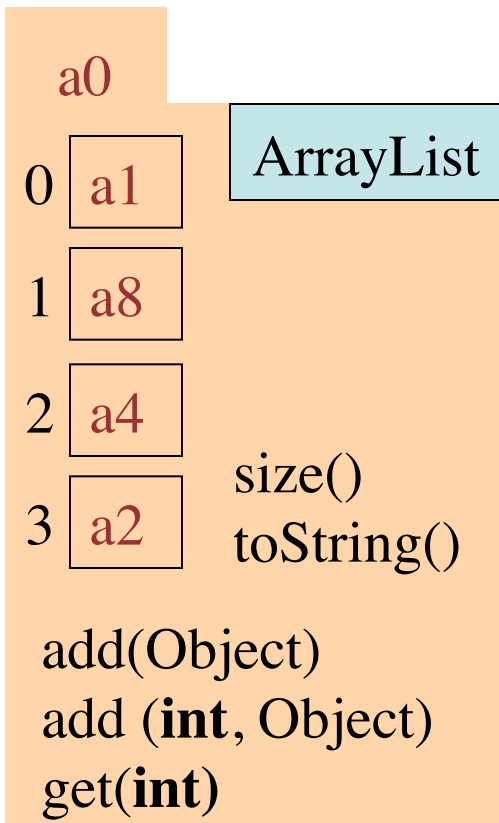

## Inserting an element

b `a0`

Inserting an element at a position takes time proportional to the number of elements that have to be shifted down.

# Retrieving an element

b.get(k) = the name of the object at position k

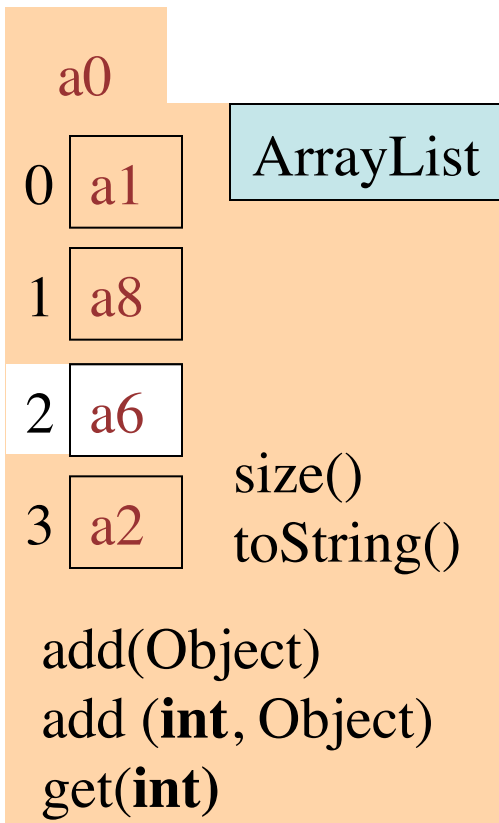

b.get(2) = a4

ArrayList is in package java.util.

## Setting an element

`b.set(2, true)` changes the element at position 2 to a wrapped `true` and returns the object previously at position 2.

## Setting an element

b.remove(1) removes the object at position 1 of the list.
