

CS2024 FALL 2016 ASSIGNMENT SUBMISSION GUIDELINES

All assignments will be turned in using the Computer Science Departments "CMS" course management system. To access, please visit <http://cms.csuglab.cornell.edu>

After you authenticate you will either be taken right to the CS2024 page or given a choice of which class area to go to if you are taking more than one class that uses CMS.

Initially you will submit assignments by uploading each source file individually to CMS. Later you will just be able to submit an archive of all files.

As part of the source code file you must include a comment block on the top of the code that will include your name/netid, date and a brief (rarely/never more than a paragraph or two) explanation of what you are doing.

While I will not assign a formal format for the write-up, it should touch on some of the following:

- What is the problem you are solving?
- How did you solve it?
- Why did you solve it this way (applicable only if there are multiple ways to solve a given problem)
- What have you learned?

The comment block writeup is worth 10 points on every assignment.

Assignments submitted *without* a writeup automatically lose 10 points.

Future assignments will have multiple code files as the submission. In those cases the name/netid, date part should be on EVERY file, but the explanation needs only be on the main file.

Please see the SampleAssignment.cpp as a guide and of course contact me with any questions.
