

CS 3410: Computer System Organization and Programming

Hakim Weatherspoon

Spring 2012

Computer Science

Cornell University

Computer System Organization

- The most amazing and likely to be most long-lived invention of the 1800's was...

Computer Organization

- The most amazing and likely to be most long-lived invention of the 1800's was...
 - (a) The steam engine?
 - (b) The lightning rod?
 - (c) The carbonated beverage?
 - (d) All of the above
 - (e) None

Computer Organization

- The most amazing and likely to be most long-lived invention of the 1800's was...

THE ELECTRIC SWITCH

Basic Building Blocks: A switch

- A switch is a simple device that can act as a conductor or isolator
- Can be used for amazing things...

In what language do computers think?

- (a) Java
- (b) C/C++
- (c) Matlab
- (c) Python
- (d) Binary Digits

Basic Building Blocks: Switches

- Either (OR)

- Both (AND)

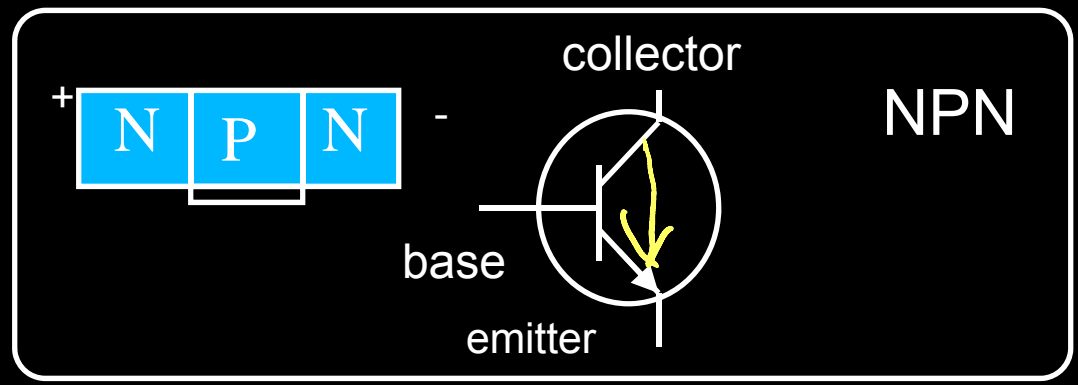

- But requires mechanical force

Building Blocks: Transistors

- Solid-state switch
 - The most amazing invention of the 1900s

- PNP and NPN

Basic Building Blocks: NPN Transistors

- Semi-conductor

- Connect E to C when base = 1

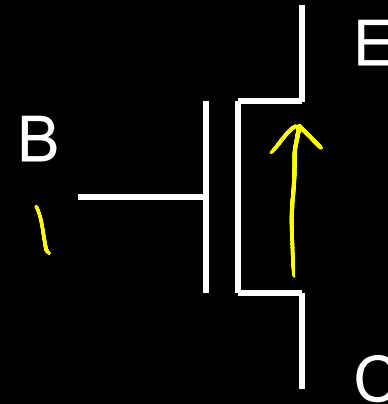

P and N Transistors

- PNP Transistor

- Connect E to C when base = 0

- NPN Transistor

- Connect E to C when base = 1

Inverter

- Function: NOT
- Called an inverter
- Symbol:

In	Out
0	1
1	0

Truth table

- Useful for taking the inverse of an input
- CMOS: complementary-symmetry metal-oxide-semiconductor

NAND Gate

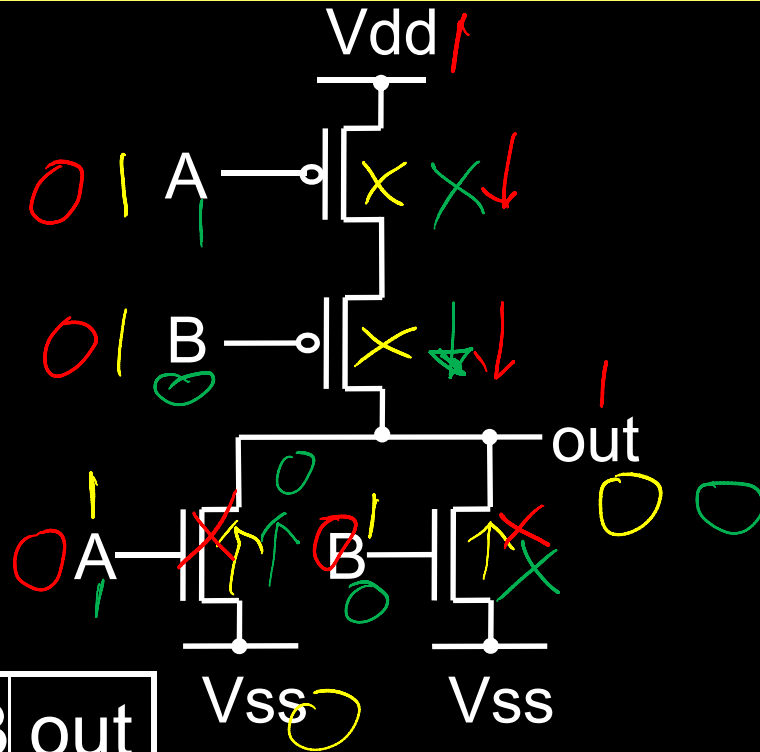

- Function: NAND
- Symbol:

A	B	out
0	0	1
1	0	1
0	1	1
1	1	0

NOR Gate

- Function: NOR
- Symbol:

A	B	out
0	0	1
1	0	0
0	1	0
1	1	0

Building Functions

- NOT:

- AND:

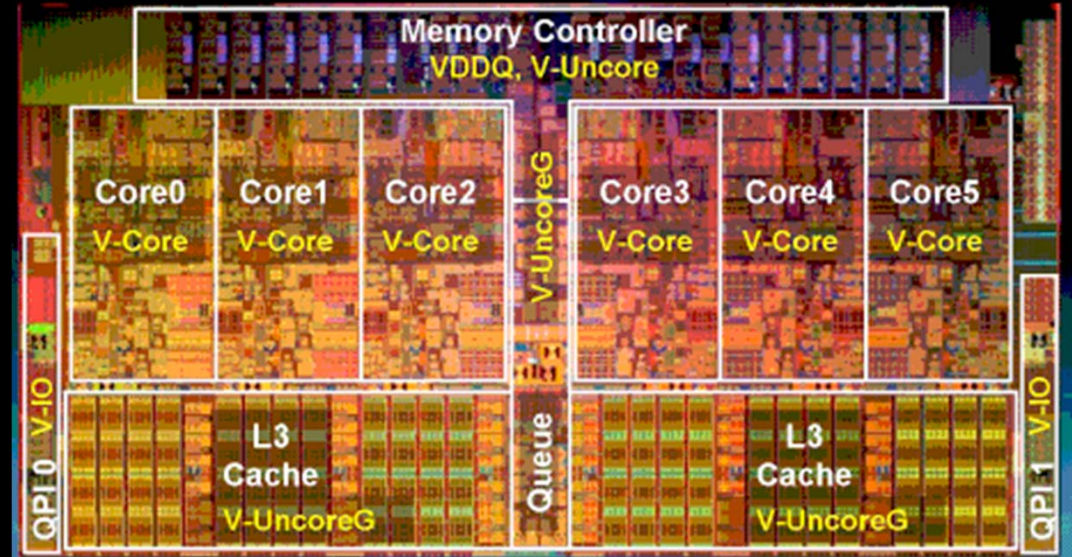

- OR:

- NAND and NOR are universal
 - Can implement any function with NAND or just NOR gates
 - useful for manufacturing

Then and Now

http://www.theregister.co.uk/2010/02/03/intel_westmere_ep_preview/

- The first transistor
 - on a workbench at AT&T Bell Labs in 1947
 - Bardeen, Brattain, and Shockley
- An Intel Westmere
 - 1.17 billion transistors
 - 240 square millimeters
 - Six processing cores

Moore's Law

The number of transistors integrated on a single die will double every 24 months...

– Gordon Moore, Intel co-founder, 1965

Amazingly Visionary

1971 – 2300 transistors – 1MHz – 4004

1990 – 1M transistors – 50MHz – i486

2001 – 42M transistors – 2GHz – Xeon

2004 – 55M transistors – 3GHz – P4

2007 – 290M transistors – 3GHz – Core 2 Duo

2009 – 731M transistors – 2GHz – Nehalem

Course Objective

- Bridge the gap between hardware and software
 - How a processor works
 - How a computer is organized
- Establish a foundation for building higher-level applications
 - How to understand program performance
 - How to understand where the world is going

Announcements: How class organized

- Instructor: Hakim Weatherspoon
(hweather@cs.cornell.edu)
- Lecture:
 - Tu/Th 1:25-2:40
 - Hollister B14
- Lab Sections:
 - Carpenter 235 (Red Room)

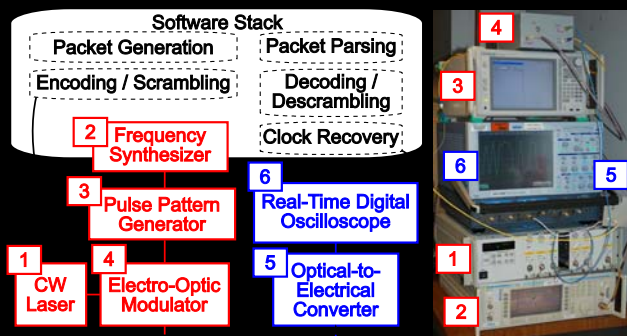

Who am I?

- Prof. Hakim Weatherspoon
 - (Hakim means Doctor, wise, or prof. in Arabic)
 - Background in Education
 - Undergraduate University of Washington
 - Played Varsity Football
 - Some teammates collectively make \$100's of millions
 - I teach!!!
 - Graduate University of California, Berkeley
 - Some class mates collectively make \$100's of millions
 - I teach!!!
 - Background in Operating Systems
 - Peer-to-Peer Storage
 - Antiquity project - Secure wide-area distributed system
 - OceanStore project – Store your data for 1000 years
 - Network overlays
 - Bamboo and Tapestry – Find your data around globe
 - Tiny OS
 - Early adopter in 1999, but ultimately chose P2P direction

Who am I?

- Cloud computing/storage
 - Optimizing a global network of data centers
 - Cornell National λ -Rail Rings testbed
 - Software Defined Network Adapter
 - Energy: KyotoFS/SMFS
- Antiquity: built a global-scale storage system

Course Staff

- cs3410-staff-l@cs.cornell.edu
- Lecture/Homework TA's
 - **Colin Ponce** (**cponce@cs.cornell.edu**) (**lead**)
 - Anish Ghulati (ag795@cornell.edu)
 - Ming Pan (mp492@cornell.edu)
- Lab TAs
 - **Han Wang** (**hwang@cs.cornell.edu**) (**lead**)
 - Zhefu Jiang (zj46@cs.cornell.edu)
- Lab Undergraduate consultants
 - Doo San Baik (db478@cornell.edu)
 - Erluo Li (el378@cornell.edu)
 - Jason Zhao (jlz27@cornell.edu)
 - **Peter Tseng** (**pht24@cornell.edu**) (**lead**)
 - Roman Averbukh (raa89@cornell.edu)
 - Scott Franklin (sdf47@cornell.edu)

Administrative Assistant:

- Randy Hess (rbhess@cs.cornell.edu)

Course Staff

Doo San Baik

Roman Averbukh

Peter Tseng

Book

- Computer Organization and Design
 - The Hardware/Software Interface

- David Patterson, John Hennessy
 - Get the 4th Edition Revised

Pre-requisites and scheduling

- CS 2110 is required
 - Must have satisfactorily completed CS 2110
 - *Cannot take CS 2110 concurrently with CS 3410*
- CS 3420 (ECE 3140)
 - Take either CS 3410 *or* CS 3420
 - both satisfy CS and ECE requirements
 - *However, Need ENGRD 2300 to take CS 3420*
- CS 3110
 - Not advised to take CS 3110 and 3410 together

Grading

- Lab (45-50%)
 - 4-5 Individual Labs (15-20%)
 - 4 Group Projects (30-35%)
- Lecture (45-50%)
 - 3 Prelims (35-40%)
 - Homework (10%)
- Participation/Discretionary (5%)

Prelims

Tu Feb 28

Th Mar 29

Th Apr 26

Grading

- Regrade policy
 - Submit written request to lead TA, and lead TA will pick a different grader
 - Submit another written request, lead TA will regrade directly
 - Submit *yet* another written request for professor to regrade.
- Late Policy
 - Each person has a **total of *four* “slip days”**
 - **Max of *two* slip days** for any individual assignment
 - For projects, slip days are deducted from all partners
 - 20% deducted per day late after slip days are exhausted

Administrivia

- <http://www.cs.cornell.edu/courses/cs3410/2012sp>
 - Office Hours / Consulting Hours
 - Lecture slides & schedule
 - Logisim
 - CSUG lab access (esp. second half of course)
- **Lab Sections (start *today*)**
 - Labs are separate than lecture and homework
 - Bring laptop to Labs (optional)

Administrivia

- <http://www.cs.cornell.edu/courses/cs3410/2012sp>
 - Office Hours / Consulting Hours
 - Lecture slides & schedule
 - Logisim
 - CSUG lab access (esp. second half of course)

- **Lab Sections (start *today*)**

T	2:55 – 4:10pm	Carpenter Hall 235 (Red Room)
W	3:35 – 4:50pm	Carpenter Hall 235 (Red Room)
W	7:30—8:45pm	Carpenter Hall 235 (Red Room)
R	11:40 – 12:55pm	Carpenter Hall 235 (Red Room)
R	2:55 – 4:10pm	Carpenter Hall 235 (Red Room)
F	2:55 – 4:10pm	Carpenter Hall 235 (Red Room)

- Labs are separate than lecture and homework
- Bring laptop to Labs
- ***This week: intro to logisim and building an adder***

Communication

- Email
 - cs3410-staff-l@cs.cornell.edu
 - The email alias goes to me and the TAs, not to whole class
- Assignments
 - CMS: <http://cms.csuglab.cornell.edu>
- Newsgroup
 - <http://www.piazza.com/cornell/spring2012/cs3410>
 - For students
- iClicker
 - <http://atcsupport.cit.cornell.edu/pollsrvcl/>

Lab Sections & Projects

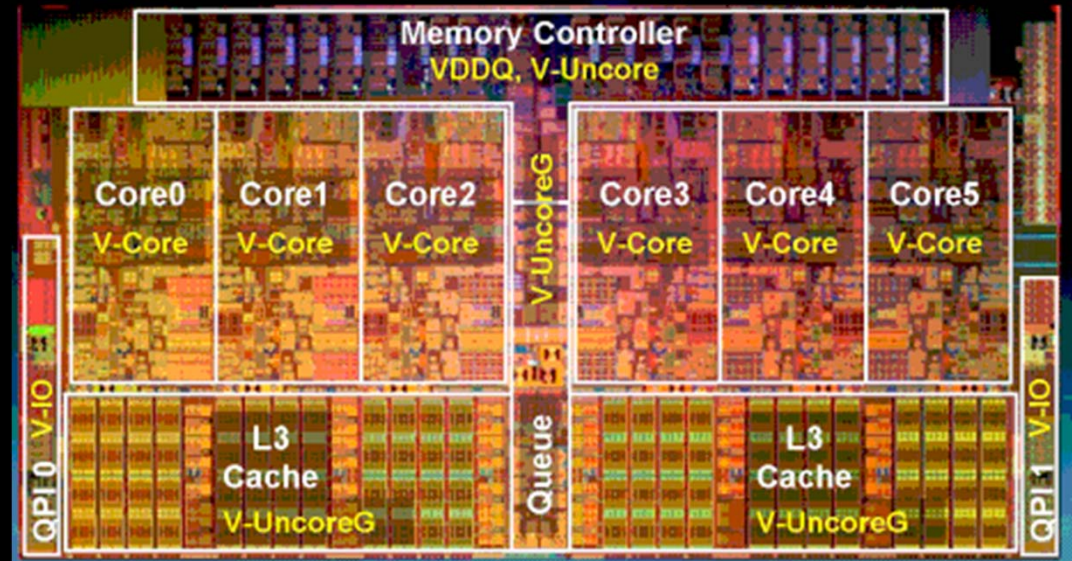

- Lab Sections start *this* week
 - Intro to logisim and building an adder
- Labs Assignments
 - Individual
 - One week to finish (usually Monday to Monday)
- Projects
 - two-person teams
 - Find partner in same section

Academic Integrity

- All submitted work must be your own
 - OK to study together, but do not share soln's
 - Cite your sources
- Project groups submit joint work
 - Same rules apply to projects at the group level
 - Cannot use of someone else's soln
- Closed-book exams, no calculators
- Stressed? Tempted? Lost?
 - Come see me before due date!

Plagiarism in any form will not be tolerated

Why do CS Students Need Transistors?

Why do CS Students Need Transistors?

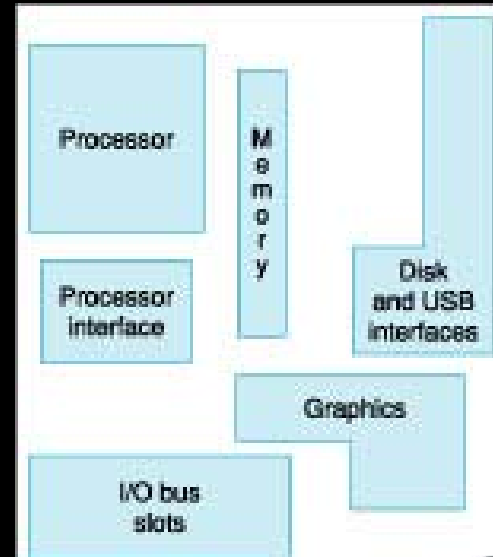

- ***Functionality and Performance***

Why do CS Students Need Transistors?

- To be better Computer Scientists and Engineers
 - Abstraction: simplifying complexity
 - How is a computer system organized? How do I build it?
 - How do I program it? How do I change it?
 - How does its design/organization effect performance?

Computer System Organization

001000001010010100000000000001111
```

addi r5 r5 15

Instruction Set Architecture

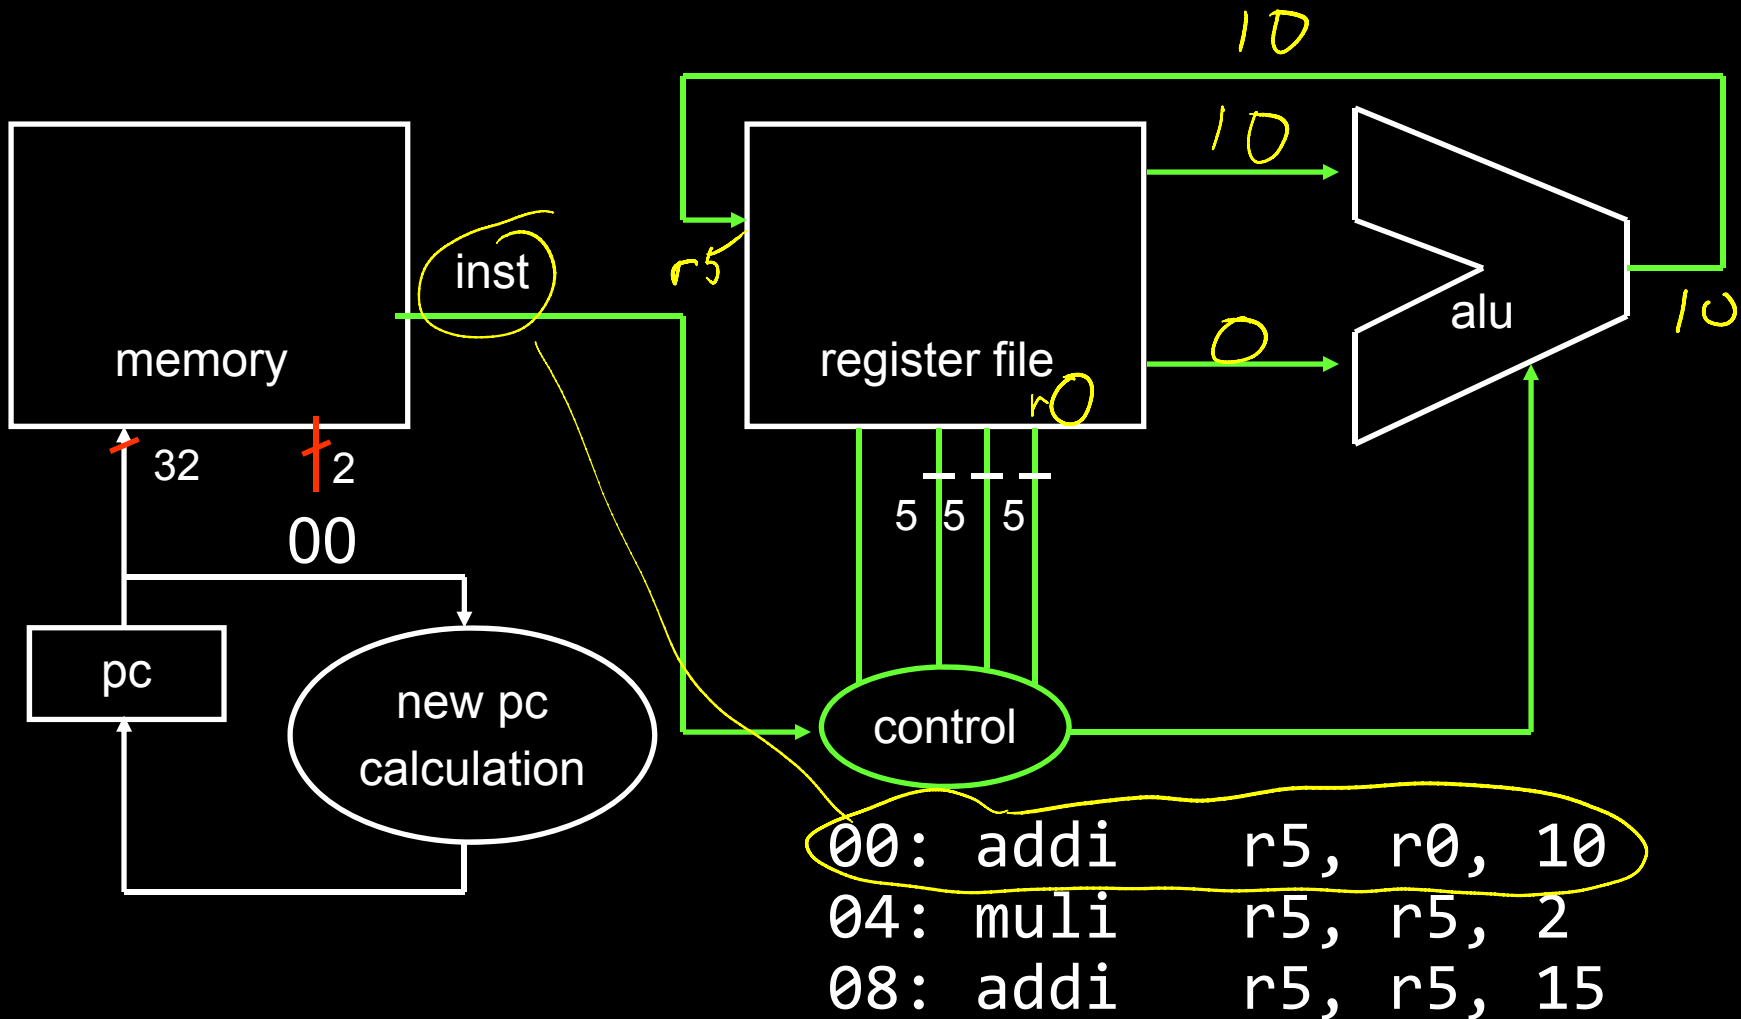

- ISA
 - abstract interface between hardware and the lowest level software
 - user portion of the instruction set plus the operating system interfaces used by application programmers

Basic Computer System

- A processor executes instructions
 - Processor has some internal state in storage elements (registers)
- A memory holds instructions and data
 - von Neumann architecture: combined inst and data
- A bus connects the two

How to Design a Simple Processor

Inside the Processor

- AMD Barcelona: 4 processor cores

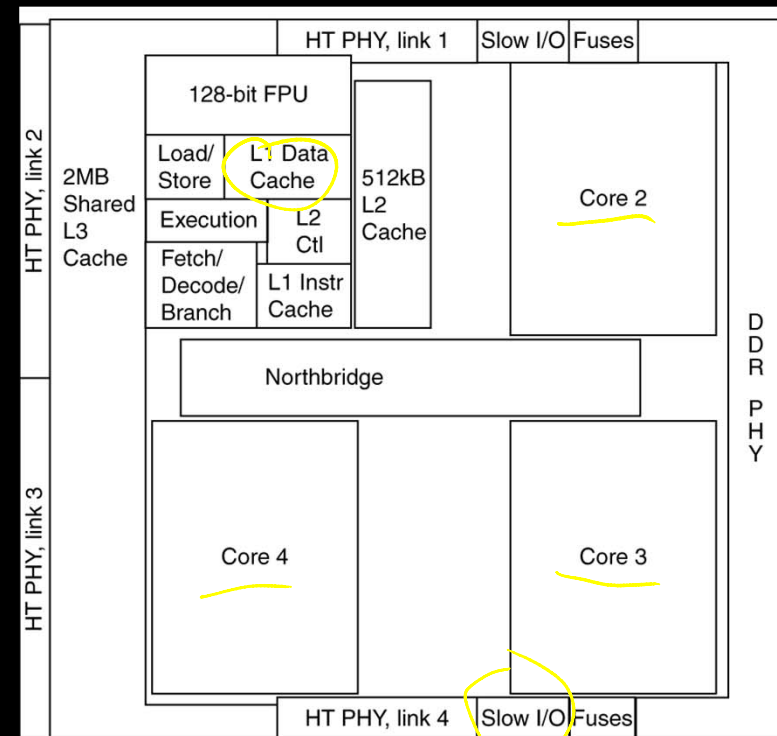

Figure from Patterson & Hennessy, Computer Organization and Design, 4th Edition

How to Program the Processor: MIPS R3000 ISA

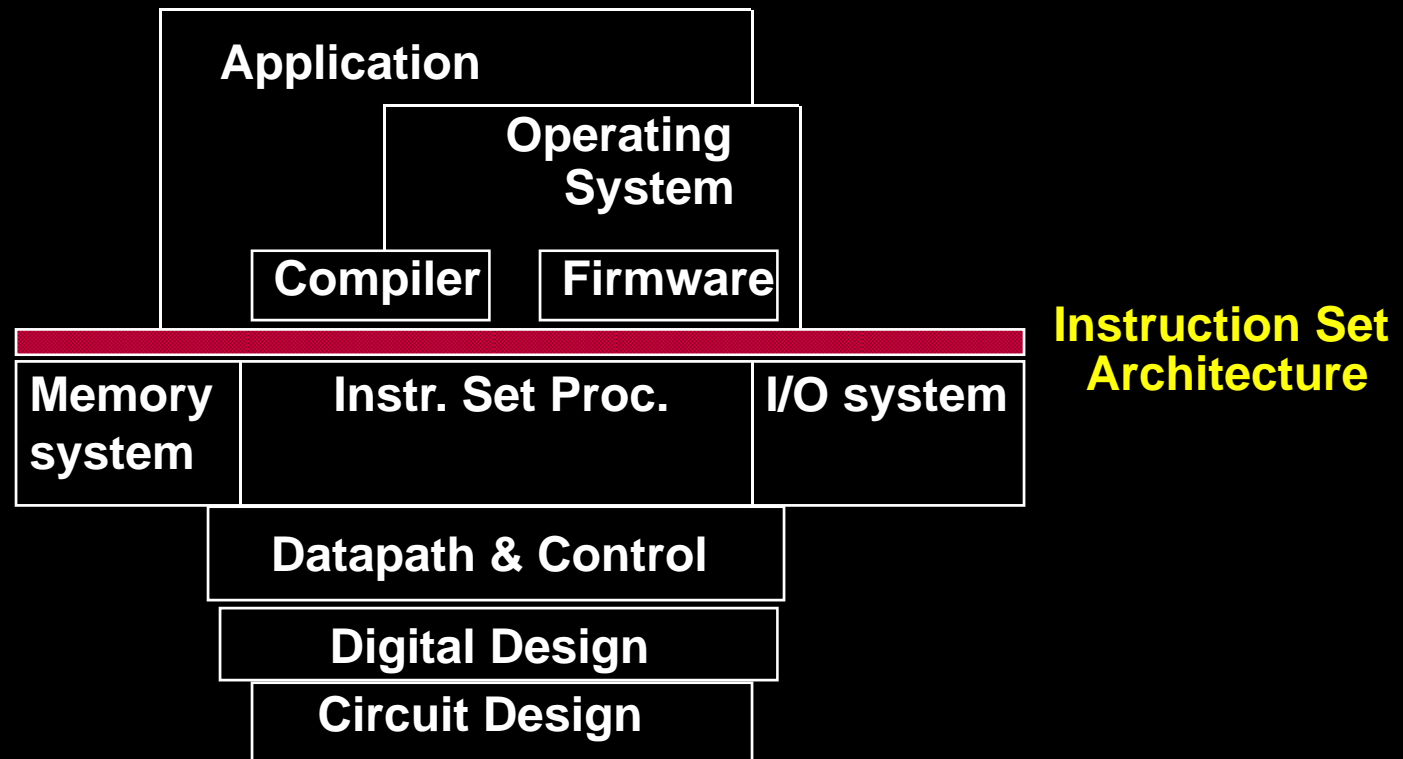

- Instruction Categories

- Load/Store
- Computational
- Jump and Branch
- Floating Point
 - coprocessor
- Memory Management

Registers

Overview

Applications

- Everything these days!
 - Phones, cars, televisions, games, computers,...

Example 3: New Devices

Xilinx FPGA

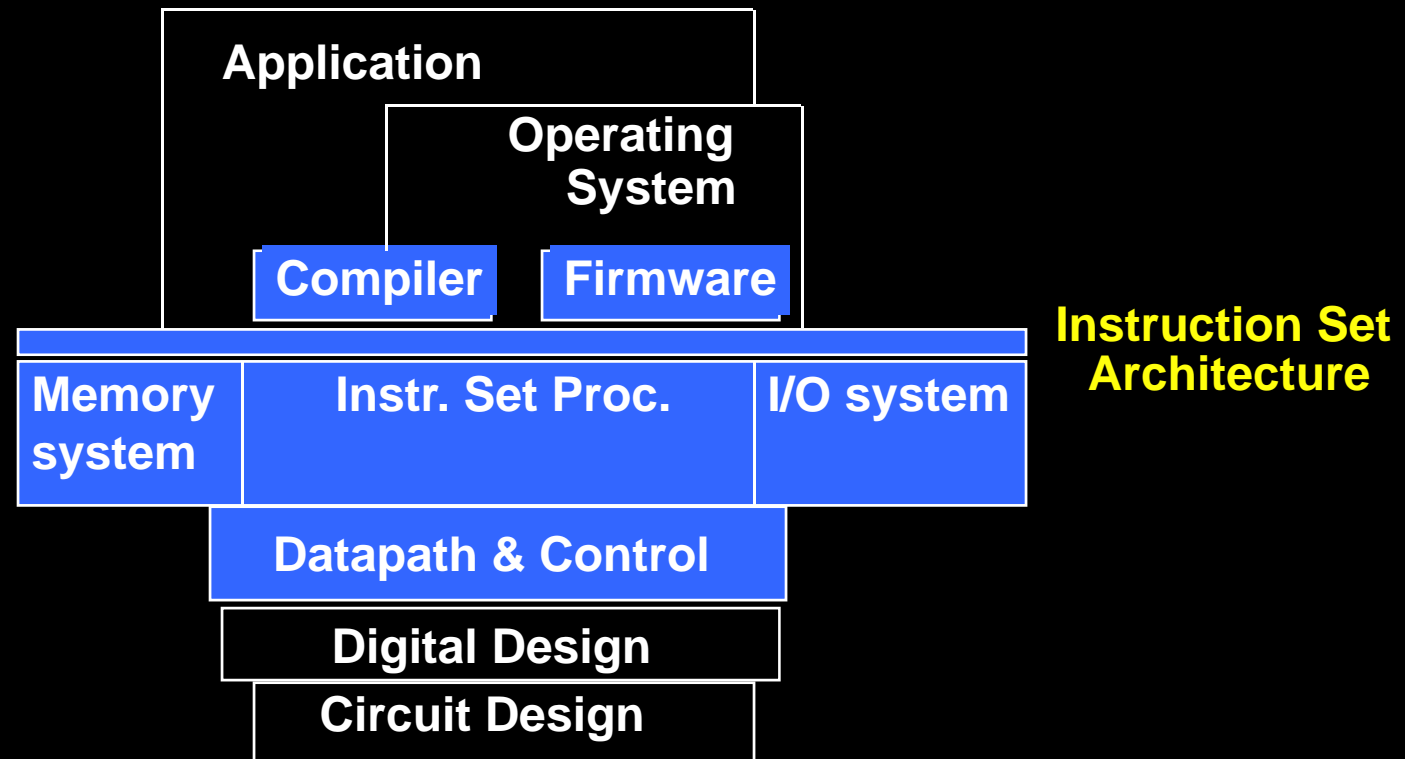

NVidia GPU

Berkeley mote

Covered in this course

Reflect

Why take this course?

- **Basic knowledge needed for *all* other areas of CS:**
operating systems, compilers, ...
- **Levels are not independent**
hardware design ↔ software design ↔ performance
- **Crossing boundaries is hard but important**
device drivers
- **Good design techniques**
abstraction, layering, pipelining, parallel vs. serial, ...
- **Understand where the world is going**
