

# *Final Project Report, CS 6241 Spring 2019*

*Instructor: Austin R. Benson*

*Due Wednesday, May 15, 2019 at 4:30pm ET*

## ASSIGNMENT

The last assignment is a *final project report*, where you synthesize all of your results in a format similar to a research paper. You can think about this as an expanded and fine-tuned version of your progress report with more results and detail. I expect an introduction to the problem and your approach, a discussion of related work, a summary of the ‘real-world’ data that you analyze, and a thorough description of your experimental results. The report should contain some mathematical discussion around the numerical method(s) that you employed and the evaluation metrics used in the experimental results.

Unlike the homeworks, feel free to use library implementations of algorithms.

The final project report should be 10–15 pages in length.

## PREPARATION & SUBMISSION GUIDELINES

**Typesetting.** The final project report should be prepared with  $\text{\LaTeX}$ .

**Collaboration.** *You must submit your final project report in the team of size 1, 2, or 3 from your proposal and progress report.* Please submit one project proposal per team but include all of the team member names and NetIDs in the submission.

**Academic Integrity.** I expect you to maintain academic integrity in the course. Failure to maintain academic integrity will be penalized severely. Plagiarism is a form of academic misconduct, so make sure to provide proper citations. Cornell has a number of guidelines on plagiarism.<sup>1</sup>
