1. What do you think about the various design choices? Was there a choice that you found strange? Would you design something differently?

2. Some people argue that there is no difference between a hand-designed feature extractor, and a hand-designed learning architecture such as LeNet. Do you agree?

3. Based on the results in the paper alone, would you recommend someone to use the proposed model? Or one of the baselines?

4. Look at the images misclassified by LeNet-5. How many of those can you recognize correctly? Do the errors seem reasonable?
