How things are said as opposed to what is said

How things are said as opposed to what is said

Example:

Client: "At what time does your shop close?"

Shopkeeper: "At five o'clock."

Shopkeeper: "Five o'clock"

How things are said as opposed to what is said

Example:

Client: "At what time does your shop close?"

Client: "What time does your shop close?"

Shopkeeper: "At five o'clock."

Shopkeeper: "Five o'clock"

How things are said as opposed to what is said

Example:

Client: "At what time does your shop close?"

Client: "What time does your shop close?"

Shopkeeper: "At five o'clock."

Shopkeeper: "Five o'clock"

[Levelt & Kelter, 1982]

How things are said as opposed to what is said

Example:

Client: "At what time does your shop close?"

Client: "What time does your shop close?"

Shopkeeper: "At five o'clock."

Shopkeeper: "Five o'clock"

[Levelt & Kelter, 1982]

for us: function word class usage

Coordination is not just exact matching:

Client: "At what time does your shop close?"

Shopkeeper: "In two hours."

Shopkeeper: "Five o'clock"

JULES: He just massaged her feet, massaging someone's feet is nothing, I massage my mother's feet.

JULES: It was a foot massage, a foot massage is nothing, I give my mother a foot massage.

JULES: He just massaged her feet, massaging someone's feet is nothing, I massage my mother's feet.

JULES: It was a foot massage, a foot massage is nothing, I give my mother a foot massage.

Matching on article presence.

JULES: It was a foot massage, a foot massage is nothing, I give my mother a foot massage.

Matching on article presence.

JULES: It was a foot massage, a foot massage is nothing, I give my mother a foot massage.

Matching on article presence.

But matching ≠ coordination!

(can happen by chance)

NOT: how similar Vincent's style is to Jules' style in general ... or even in this particular conversation

Compare rate of article usage in Vincent's and Jules' utterances?

Compare rate of article usage in Vincent's and Jules' utterances?

not capturing immediate triggering

Correlation of article usage?

Correlation of article usage?

Symmetric, so not measuring a directed triggering effect

Trigger

 $Coordination_{(J \ to \ V)}(art.) = P(J^{art.}|J \ replied to \ V, V^{art})$

Trigger

Coordination_(J to V)(art.) = $P(J^{art.}|J \text{ replied to } V, V^{art})$

does not control for style similarity

```
Coordination_{(J \text{ to } V)}(art.) = P(J^{art.} | J \text{ replied to } V, V^{art})
-P(J^{art.} | J \text{ replied to } V)
Control \text{ (for inherent similarity)}
```

$$Coordination_{(J \text{ to } V)}(art.) = P(J^{art.} | J \text{ replied to } V, V^{art})$$

$$-P(J^{art.} | J \text{ replied to } V)$$

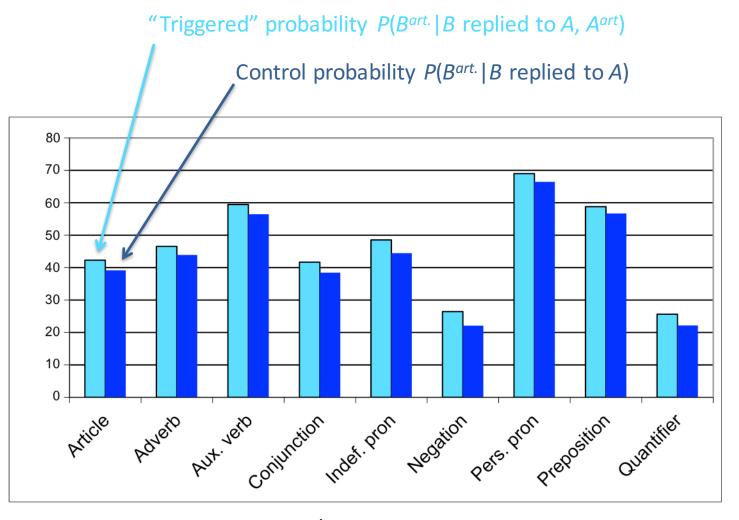

$$Control \text{ (for inherent similarity)}$$

In words: "How much does the probability of Jules using an article increase as a direct consequence of Vincent using an article"

Overall coordination: average over all pairs of users (*B*,*A*)

"Triggered" probability Control probability $P(B^{art.}|B \text{ replied to } A, A^{art})$ $P(B^{art.}|B \text{ replied to } A)$ Coordination 30 20 10 Article

Coordination effect in social networks!

Two very different empirical settings:

Wikipedia community of editors:

- 240,000 conversational exchanges on "talk pages"
- users become admins through elections

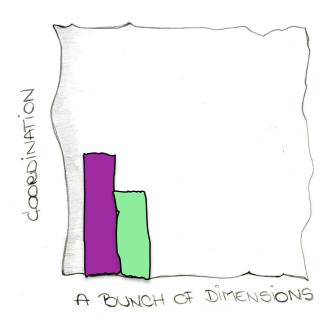

U.S. Supreme Court oral arguments:

- 50,000 verbal exchanges
- between Justices and lawyers

Hypothesis: Higher power → others coordinate more towards you

Coordination towards high-power people (purple)

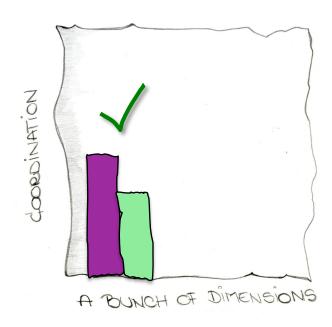

Coordination towards low-power people (green)

Hypothesis: Higher power → others coordinate more towards you purple > green?

Coordination towards high-power people (purple)

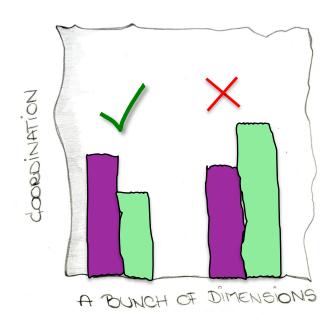

Coordination towards low-power people (green)

Hypothesis: Higher power → others coordinate more towards you purple > green?

Coordination towards high-power people (purple)

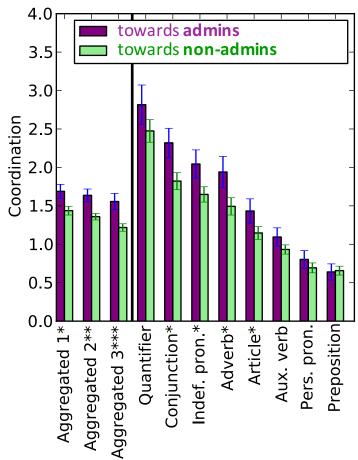

Coordination towards low-power people (green)

Hypothesis: Higher power → others coordinate more towards you

Wikipedia:

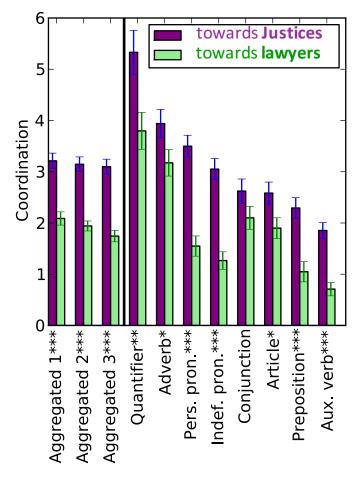

purple > green?

Hypothesis: Higher power → others coordinate more towards you

Supreme Court:

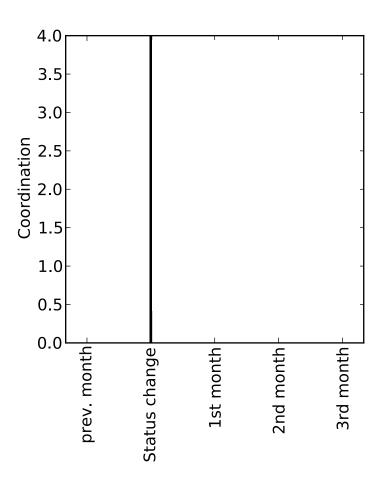

purple > green?

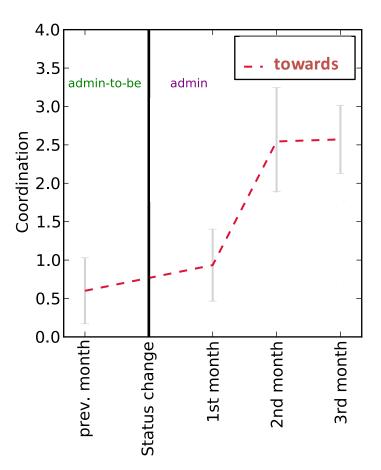

Coordination and status change

Track a fixed group of users as they undergo status change

Coordination and status change

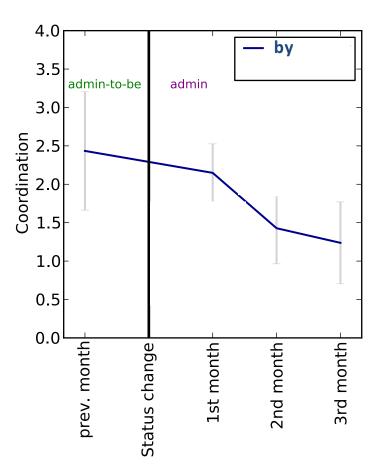

Track a fixed group of users as they undergo status change

Coordination **towards**users increases after
these gain higher status

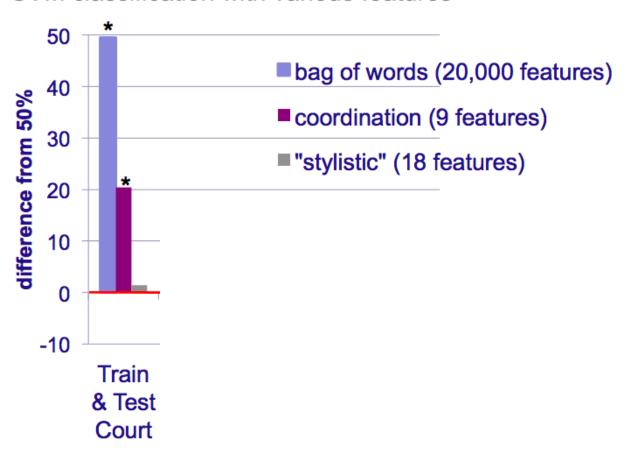

Coordination and status change

Track a fixed group of users as they undergo status change

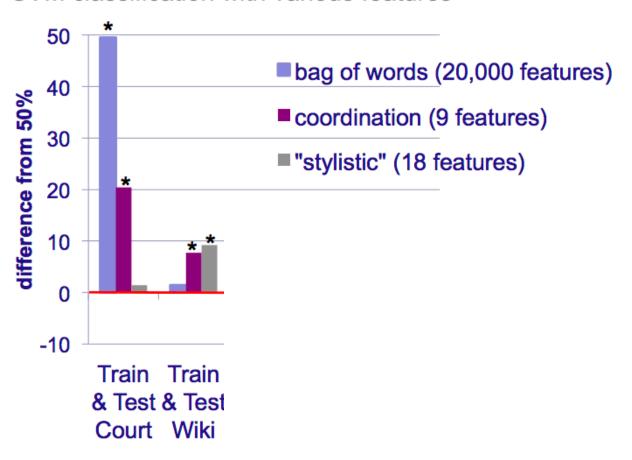

Coordination **by** users decreases after these gain higher status
