Cornell University
Computer Science

Administrivia

- Assignment 3 due next Friday, 3/9
- Prelim 1! This Thursday in class
 - Topics through today (including running time, sorting, selection, graphs, linked lists)
 - Closed book / closed notes
- Review session Wednesday evening, 7pm, Upson 111

Linked Lists -- Example

Inserting an element – linked lists

- Create a new cell and splice it into the list

- Splicing depends on where the cell goes:
 - How do we insert:
 - At the end?
 - In the middle?
 - At the beginning?

Adding a header

- We can represent the linked list just by the initial cell, but this is problematic
 - Problem with inserting at the beginning

- Instead, we add a header – a few entries that are not cells, but hold information about the list
 1. A pointer to the first element
 2. A count of the number of elements

Linked list insertion

Linked list deletion

- We can also delete cells
- Simply update the header and change one pointers (to skip over the deleted element)
- Deleting things is the source of many bugs in computer programs
 - You need to make sure you delete something once, and only once

Linked list deletion

Initial list	<table border="1" style="border-collapse: collapse; width: 100%; text-align: center;"> <tr> <td style="padding: 2px 5px;"><i>1</i></td><td style="padding: 2px 5px;"><i>2</i></td><td style="padding: 2px 5px;"><i>3</i></td><td style="padding: 2px 5px;"><i>4</i></td><td style="padding: 2px 5px;"><i>5</i></td><td style="padding: 2px 5px;"><i>6</i></td><td style="padding: 2px 5px;"><i>7</i></td><td style="padding: 2px 5px;"><i>8</i></td><td style="padding: 2px 5px;"><i>9</i></td><td style="padding: 2px 5px;"><i>10</i></td><td style="padding: 2px 5px;"><i>11</i></td><td style="padding: 2px 5px;"><i>12</i></td><td style="padding: 2px 5px;"><i>13</i></td> </tr> <tr> <td style="padding: 2px 5px;">5</td><td style="padding: 2px 5px;">4</td><td style="padding: 2px 5px; color: blue;">2</td><td style="padding: 2px 5px; color: red;">7</td><td style="padding: 2px 5px; color: blue;">1</td><td style="padding: 2px 5px; color: red;">9</td><td style="padding: 2px 5px; color: blue;">5</td><td style="padding: 2px 5px; color: red;">0</td><td style="padding: 2px 5px; color: blue;">8</td><td style="padding: 2px 5px; color: red;">3</td><td style="padding: 2px 5px;">X</td><td style="padding: 2px 5px;">X</td><td style="padding: 2px 5px;">X</td> </tr> </table>	<i>1</i>	<i>2</i>	<i>3</i>	<i>4</i>	<i>5</i>	<i>6</i>	<i>7</i>	<i>8</i>	<i>9</i>	<i>10</i>	<i>11</i>	<i>12</i>	<i>13</i>	5	4	2	7	1	9	5	0	8	3	X	X	X
<i>1</i>	<i>2</i>	<i>3</i>	<i>4</i>	<i>5</i>	<i>6</i>	<i>7</i>	<i>8</i>	<i>9</i>	<i>10</i>	<i>11</i>	<i>12</i>	<i>13</i>															
5	4	2	7	1	9	5	0	8	3	X	X	X															
Delete the last cell	<table border="1" style="border-collapse: collapse; width: 100%; text-align: center;"> <tr> <td style="padding: 2px 5px;"><i>1</i></td><td style="padding: 2px 5px;"><i>2</i></td><td style="padding: 2px 5px;"><i>3</i></td><td style="padding: 2px 5px;"><i>4</i></td><td style="padding: 2px 5px;"><i>5</i></td><td style="padding: 2px 5px;"><i>6</i></td><td style="padding: 2px 5px;"><i>7</i></td><td style="padding: 2px 5px;"><i>8</i></td><td style="padding: 2px 5px;"><i>9</i></td><td style="padding: 2px 5px;"><i>10</i></td><td style="padding: 2px 5px;"><i>11</i></td><td style="padding: 2px 5px;"><i>12</i></td><td style="padding: 2px 5px;"><i>13</i></td> </tr> <tr> <td style="padding: 2px 5px;">5</td><td style="padding: 2px 5px; background-color: #cccccc;">3</td><td style="padding: 2px 5px; color: blue;">2</td><td style="padding: 2px 5px; color: red;">0</td><td style="padding: 2px 5px; color: blue;">1</td><td style="padding: 2px 5px; color: red;">9</td><td style="padding: 2px 5px; color: blue;">5</td><td style="padding: 2px 5px; color: red;">0</td><td style="padding: 2px 5px; color: blue;">8</td><td style="padding: 2px 5px; color: red;">3</td><td style="padding: 2px 5px;">X</td><td style="padding: 2px 5px;">X</td><td style="padding: 2px 5px;">X</td> </tr> </table>	<i>1</i>	<i>2</i>	<i>3</i>	<i>4</i>	<i>5</i>	<i>6</i>	<i>7</i>	<i>8</i>	<i>9</i>	<i>10</i>	<i>11</i>	<i>12</i>	<i>13</i>	5	3	2	0	1	9	5	0	8	3	X	X	X
<i>1</i>	<i>2</i>	<i>3</i>	<i>4</i>	<i>5</i>	<i>6</i>	<i>7</i>	<i>8</i>	<i>9</i>	<i>10</i>	<i>11</i>	<i>12</i>	<i>13</i>															
5	3	2	0	1	9	5	0	8	3	X	X	X															
Delete the 8	<table border="1" style="border-collapse: collapse; width: 100%; text-align: center;"> <tr> <td style="padding: 2px 5px;"><i>1</i></td><td style="padding: 2px 5px;"><i>2</i></td><td style="padding: 2px 5px;"><i>3</i></td><td style="padding: 2px 5px;"><i>4</i></td><td style="padding: 2px 5px;"><i>5</i></td><td style="padding: 2px 5px;"><i>6</i></td><td style="padding: 2px 5px;"><i>7</i></td><td style="padding: 2px 5px;"><i>8</i></td><td style="padding: 2px 5px;"><i>9</i></td><td style="padding: 2px 5px;"><i>10</i></td><td style="padding: 2px 5px;"><i>11</i></td><td style="padding: 2px 5px;"><i>12</i></td><td style="padding: 2px 5px;"><i>13</i></td> </tr> <tr> <td style="padding: 2px 5px;">5</td><td style="padding: 2px 5px; background-color: #cccccc;">2</td><td style="padding: 2px 5px; color: blue;">2</td><td style="padding: 2px 5px; color: red;">0</td><td style="padding: 2px 5px; color: blue;">1</td><td style="padding: 2px 5px; color: red;">3</td><td style="padding: 2px 5px; color: blue;">5</td><td style="padding: 2px 5px; color: red;">0</td><td style="padding: 2px 5px; color: blue;">8</td><td style="padding: 2px 5px; color: red;">3</td><td style="padding: 2px 5px;">X</td><td style="padding: 2px 5px;">X</td><td style="padding: 2px 5px;">X</td> </tr> </table>	<i>1</i>	<i>2</i>	<i>3</i>	<i>4</i>	<i>5</i>	<i>6</i>	<i>7</i>	<i>8</i>	<i>9</i>	<i>10</i>	<i>11</i>	<i>12</i>	<i>13</i>	5	2	2	0	1	3	5	0	8	3	X	X	X
<i>1</i>	<i>2</i>	<i>3</i>	<i>4</i>	<i>5</i>	<i>6</i>	<i>7</i>	<i>8</i>	<i>9</i>	<i>10</i>	<i>11</i>	<i>12</i>	<i>13</i>															
5	2	2	0	1	3	5	0	8	3	X	X	X															
Delete the first cell	<table border="1" style="border-collapse: collapse; width: 100%; text-align: center;"> <tr> <td style="padding: 2px 5px;"><i>1</i></td><td style="padding: 2px 5px;"><i>2</i></td><td style="padding: 2px 5px;"><i>3</i></td><td style="padding: 2px 5px;"><i>4</i></td><td style="padding: 2px 5px;"><i>5</i></td><td style="padding: 2px 5px;"><i>6</i></td><td style="padding: 2px 5px;"><i>7</i></td><td style="padding: 2px 5px;"><i>8</i></td><td style="padding: 2px 5px;"><i>9</i></td><td style="padding: 2px 5px;"><i>10</i></td><td style="padding: 2px 5px;"><i>11</i></td><td style="padding: 2px 5px;"><i>12</i></td><td style="padding: 2px 5px;"><i>13</i></td> </tr> <tr> <td style="padding: 2px 5px; background-color: #cccccc;">3</td><td style="padding: 2px 5px; background-color: #cccccc;">1</td><td style="padding: 2px 5px; color: blue;">2</td><td style="padding: 2px 5px; color: red;">0</td><td style="padding: 2px 5px; color: blue;">1</td><td style="padding: 2px 5px; color: red;">3</td><td style="padding: 2px 5px; color: blue;">5</td><td style="padding: 2px 5px; color: red;">0</td><td style="padding: 2px 5px; color: blue;">8</td><td style="padding: 2px 5px; color: red;">3</td><td style="padding: 2px 5px;">X</td><td style="padding: 2px 5px;">X</td><td style="padding: 2px 5px;">X</td> </tr> </table>	<i>1</i>	<i>2</i>	<i>3</i>	<i>4</i>	<i>5</i>	<i>6</i>	<i>7</i>	<i>8</i>	<i>9</i>	<i>10</i>	<i>11</i>	<i>12</i>	<i>13</i>	3	1	2	0	1	3	5	0	8	3	X	X	X
<i>1</i>	<i>2</i>	<i>3</i>	<i>4</i>	<i>5</i>	<i>6</i>	<i>7</i>	<i>8</i>	<i>9</i>	<i>10</i>	<i>11</i>	<i>12</i>	<i>13</i>															
3	1	2	0	1	3	5	0	8	3	X	X	X															

Linked lists – running time

- We can insert an item (at the front) in constant ($O(1)$) time
 - Just manipulating the pointers
 - As long as we know where to *allocate* the cell
- We can delete an element (at the front) in constant time

Linked lists – running time

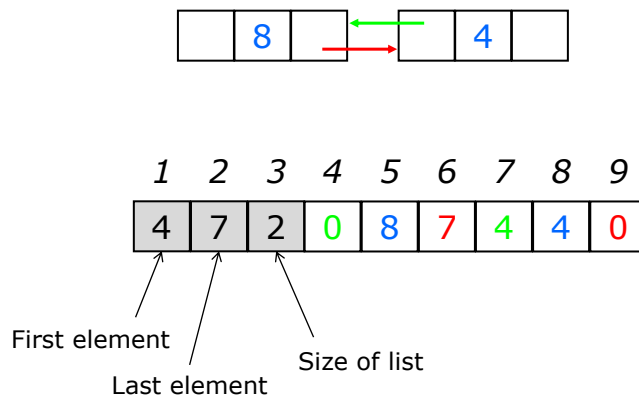

- What about inserting / deleting from the end of the list?
- How can we fix this?

Doubly linked lists

A doubly-linked list in memory

Notes on doubly-linked lists

- Inserting and deleting at both ends is fast, but the code is very easy to get wrong
 - Try it on all cases, especially trivial ones
 - Look for **invariants**: statements that must be true of any valid list
 - Debug your code by checking invariants
 - In C/C++, this is done via *assert*
 - Most languages have a facility like this built in
 - But if not, you can just write your own!

Memory allocation

- So far we just assumed that the hardware supplied us with a huge array M
 - When we need more storage, we just grab locations at the end
 - Keep track of next free memory location
 - What can go wrong?
 - Consider repeatedly adding, deleting an item
- When we delete items from a linked list we change pointers so that the items are inaccessible
 - But they still waste space!

Storage reclamation

- Someone has to figure out that certain locations can be re-used (“garbage”)
 - If this is too conservative, your program will run slower and slower (“memory leak”)
 - If it’s too aggressive, your program will crash (“blue screen of death”)

Questions?
