

# Introduction to C

## CS 2022: Introduction to C

Instructor: Hussam Abu-Libdeh  
Presented by: Renato Paes Leme

Cornell University

Fall 2009, Lecture 1

# Administrivia

- ▶ Instructor: Hussam Abu-Libdeh, 4139 Upson
- ▶ Email: [hussam@cs.cornell.edu](mailto:hussam@cs.cornell.edu)
- ▶ Lectures: MWF 12:20–1:10p, THR 205
- ▶ Lab: Upson B7 (when announced)
- ▶ Office Hours: To Be Determined
- ▶ [www.cs.cornell.edu/courses/cs2022/](http://www.cs.cornell.edu/courses/cs2022/)
- ▶ CMS: <http://cms.csuglab.cornell.edu/>

C is a language...

# C is a language...

..., like English.

What are languages for?

# C is a language...

..., like English.

What are languages for?

- ▶ communicate ideas
- ▶ convince someone
- ▶ express feelings and beliefs
- ▶ vehicle for art
- ▶ state ideas
- ▶ ...

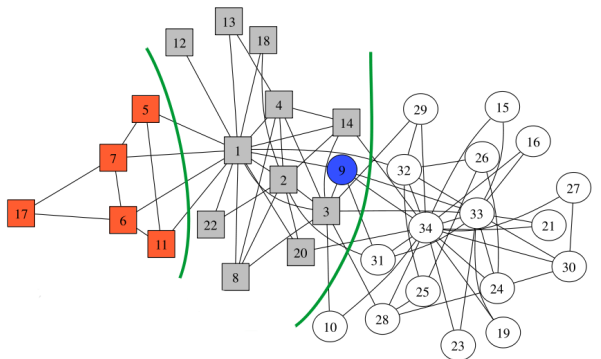

# Visual art

# Computer generated poetry

Imagine now a tree in white sails still whirled  
About the leaves  
will be of silences  
Calm and angels

# Social Sciences

Zachary's karate club

# Communicate mathematical ideas

1. Simulations, e.g., Monty Hall Problem
2. Solve large systems of equations
3. Automatic provers
4. ...

# Design useful tools

Google™

# How to learn a foreign language?

1. be able to express yourself
2. have someone to correct your grammar
3. develop some style
4. communicate efficiently
5. say original and interesting things

# How to learn a programming language?

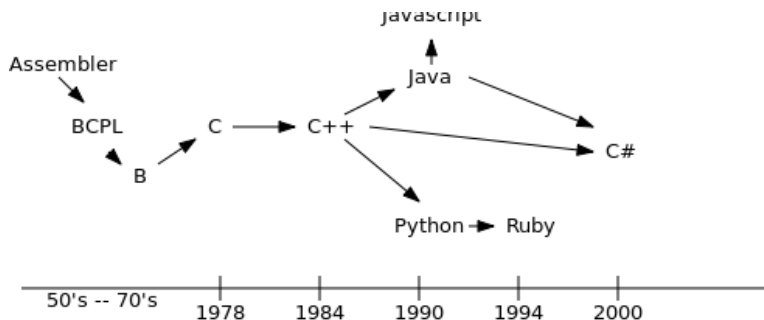

1. express what you want in C
2. let the compiler correct you
3. know good coding practices
4. optimize your code
5. write beautiful code

# Pre-requisites

- ▶ Basic programming knowledge (variables, functions, loops)
- ▶ Lots of composure
  - ▶ Your programs won't compile
  - ▶ Your programs won't run
  - ▶ Your programs will crash
  - ▶ You'll have no idea what happened
  - ▶ ... but at least it'll happen fast!

# Programming Languages Genealogy

# History of C

- ▶ Writing code in an assembler gets real old real fast
  - ▶ Really low level (no loops, functions, if-then-else)
  - ▶ Not portable (different for each architecture)
- ▶ BCPL (by Martin Richards): Grandparent of C
  - ▶ Close to the machine
  - ▶ Procedures, Expressions, Statements, Pointers, ...
- ▶ B (by Ken Thompson): Parent of C
  - ▶ Simplified BCPL
  - ▶ Some types (int, char)

# History of C

- ▶ C (by Kernighan and Ritchie)
  - ▶ Much faster than B
  - ▶ Arrays, Structures, more types
- ▶ Standardization
- ▶ Portability enhanced
- ▶ Parent of Objective C, Concurrent C, C\*, C++

# When to use C

- ▶ Working close to hardware
  - ▶ Operating System
  - ▶ Device Drivers
- ▶ Need to violate type-safety
  - ▶ Pack and unpack bytes
  - ▶ Inline assembly
- ▶ Cannot tolerate overheads
  - ▶ No garbage collector
  - ▶ No array bounds check
  - ▶ No memory initialization
  - ▶ No exceptions

# When not to use C

Use JAVA or C# for ...

- ▶ Quick prototype
- ▶ Compile-once Run-Everywhere
- ▶ Reliability is critical, and performance is secondary
  - ▶ C can be very reliable, but requires tremendous programmer discipline
  - ▶ For many programs, JAVA can match C performance, but not always

# How to be good programmer

# How to be good programmer

- ▶ Practice, practice, practice

# How to be good programmer

- ▶ Practice, practice, practice
- ▶ Code for fun

# How to be good programmer

- ▶ Practice, practice, practice
- ▶ Code for fun
- ▶ Don't wait. Google for it.

# How to be good programmer

- ▶ Practice, practice, practice
- ▶ Code for fun
- ▶ Don't wait. Google for it.
- ▶ Coding competitions:
  1. USACO: [train.usaco.org](http://train.usaco.org)
  2. Topcoder: [www.topcoder.com/tc](http://www.topcoder.com/tc)
  3. UVA: [uva.onlinejudge.org/](http://uva.onlinejudge.org/)
