Welcome to CS2110!

325 Freshmen
112 Sophomores
044 Juniors
044 Seniors
042 Meng/Masters
021 Graduate PhD

Instructors:
David Gries, Ross Tate

Recitation leaders: 24

Consultants: 19

Above numbers were from several days ago.
Last look at enrollment: 590.
Welcome to CS2110!

Learning about:

- OO, abstract data types, generics, Java Collections, ...
- Reasoning about complex problems, analyzing algorithms we create to solve them, and implementing algorithms with elegant, easy-to-understand, correct code
- Testing; Reasoning about correctness
- Data structures: linked lists, trees, hash tables, graphs, etc.
- Recursion
- Algorithmic complexity
- Parallelism—threads of execution
This summer I'm working in particle physics, making simulations of some of the background signal we’d expect to see in our detector for an experiment run in the particle accelerator. What I'm working on a clustering algorithm to put together energy depositions from several quantized points in the detector to learn what the initial particle's energy and position was. After some thought, I decided the best first sweep over this data would be to do a **depth first search** starting about a high energy deposition in the calorimeter. It works great, and my PI was very excited about the results!
Usefulness of 2110

I am working at a startup in Silicon Valley this summer … that does subscription-based financial management and billing among other things. It has been pretty incredible the amount I've learned from your class that relates to this internship and I have definitely decided to pursue computer science (I was initially engineering physics).
Is CS2110 right for you?

- Knowledge of Java not required
  - Only ~30% of you know Java – others know Matlab, Python …
  - Requirement: comfort with some programming language, on the level of CS1110 (Python based) and CS1112 (Matlab based).
  - Prior knowledge of OO not required.
- We assume you do not know Java!
Homework!

**Homework 1.** Read article *Why Software is So Bad.*
Link: Course website -> Lectures notes (Lecture 1)

**Homework 2.** Get Java and Eclipse on your computer

**Homework 3.** Spend some time perusing the course website.
Look at course information, resources, links, etc.

**Homework 4.** BEFORE EACH LECTURE: download the pdf form of the slides, bring them to class, and look through them during the lecture. We will be projecting not only PPT but also Eclipse and other things; having the PPT slides in paper form or on your laptop/tablet can help you during the lecture.
Lectures

- TR 10:10-11am, Statler auditorium
  - Attendance mandatory

- ENGRD 2110 or CS 2110?
  - **Same course!** We call it CS 2110 in online materials
  - Non-engineers sign up for CS 2110
  - Engineers sign up for ENGRD 2110
# Sections (Recitations)

<table>
<thead>
<tr>
<th>Time</th>
<th>Sections</th>
</tr>
</thead>
<tbody>
<tr>
<td>T 12:20</td>
<td>4 sections: 35, 33, 33, 26</td>
</tr>
<tr>
<td>T 1:25</td>
<td>2 sections: 39, 36, 18</td>
</tr>
<tr>
<td>T 2:30</td>
<td>2 sections: 39, 8</td>
</tr>
<tr>
<td>T 3:35</td>
<td>1 section: 39, 10</td>
</tr>
<tr>
<td>W 12:20</td>
<td>2 sections: 40, 40, 22</td>
</tr>
<tr>
<td>W 01:25</td>
<td>2 sections: 40, 39, 17</td>
</tr>
<tr>
<td>W 02:30</td>
<td>1 section: 40, 23</td>
</tr>
<tr>
<td>W 07:30</td>
<td>1 section: 19</td>
</tr>
</tbody>
</table>

Some time EARLY, visit StudentCenter and change your section to even out the numbers

- Attendance is mandatory
- Sometimes review, help on homework, new material
- No permission needed to switch sections, but do register for whichever one you attend
An “enrichment” course

We want to help students who might otherwise feel overwhelmed by CS2110

Gives more explanation of core ideas behind Java, programming, data structures, assignments, etc.

Taught by Gries and Tate, 1 credit S/U

Only for students who also take CS2110

Only requirement: Attend weekly lecture
I would just like to thank you for taking the time to hold CS2111 this year. You have no idea how the class helped and impacted a lot of us. I would never had "survived" CS2110 without your generous share of your knowledge. I appreciated your time.
Academic Excellence Workshops

- Two-hour labs: students work together in cooperative setting
- One credit S/U course based on attendance
- Time and location TBA
- Visit Olin 167 and ask about AEWs
- See website for more info:
  
  www.engineering.cornell.edu/academics/undergraduate/curriculum/courses/workshops/index.cfm
Piazza

- Click link on our web page to register

- Incredible resource for 24 x 7 help with anything

- We keep an eye on it and answer questions. YOU can (and will) too. Visit the Piazza often.
Resources

- Book: Frank M. Carrano, *Data Structures and Abstractions with Java, 3\textsuperscript{rd} ed.*, Prentice Hall
  - 2\textsuperscript{nd} edition is okay. E-book not required
  - Share textbook. Need access to it from time to time
  - Copies on reserve in Engr Library

- PPT slides (on course website and Piazza) outline all of OO in Java. Has index at beginning

- Great Java resource: online materials at Oracle JDK web site. Google has it indexed.

Obtaining Java

- Follow instructions on our Resources web page
  - Make sure you have Java JDK 1.8, if not download and install. We explain how on the web page.
  - Then download and install the Eclipse IDE

- Test it out: launch Eclipse and click “new>Java Project”
  - This is one of a few ways Java can be used
  - When program runs, output is visible in a little console window
Eclipse IDE

- IDE: Integrated Development Environment
  - Helps you write your code
  - Protects against many common mistakes
  - At runtime, helps with debugging
- Follow Resources link to download and install
DrJava IDE

- IDE: Integrated Development Environment
- DrJava is a much simpler IDE, few features
- We use it only to demo Java features and programming concepts. Has an “interactions pane”, which allows trying things without requiring a complete Java program.
- DON’T use it for course assignments — use Eclipse
- Free at www.drjava.org. Download the jar file, not the app!!!
Coursework

- 7–8 programming assignments (37%)
- Two prelims (14% – 16%)
- Final exam (30%)
- Course evaluation (1%)
- Possible surprise quizzes (2%)

Formula will change as course progresses and we make changes in assignments, give quizzes, etc.

Exams are most important aspect in determining final grade.
Assignments: a real learning experience

- Teams of one or two
  - A0 and then A1 will be posted soon on the CMS
  - Finding a partner: choose your own or contact your TA. Piazza can be helpful.

One way to do an assignment:
Wait until the day before it is due.
Result: Frustration, anger, impatience, long lines in consulting room. No fun.
Not a good educational experience

One way to do an assignment:
Read the handout immediately.
Work on it every (other) day.
Ponder. Look things up. Get help in consulting room, with no lines, or office hours.
It’s fun, hard work but a great learning experience
academic integrity... trust but verify!

- 98% of you are honest and don’t try to cheat
- We use artificial intelligence tools to check each homework assignment, so catch the other 2%
  - The software is very accurate!
  - It tests your code and also notices similarities between code written by different people
- Sure, you can fool this software
  - … but it’s easier to just do the assignments
  - … and if you try to fool it and screw up, you might fail the assignment or even the whole course.
Types in Java

References in text and in JavaSummary

type: A.14  slide 4
variable: A.13  slide 7
variable declaration: A.15  slide 7
Primitive types, A.16, back inside cover  slide 5
Constants, A.17 slide 20
Assignment, A.18-A.20  slide 8
Casting, A.21  slide 6
Expressions: A.22-A.23
Precedences: A.24, back inside cover
Unicode character codes, back inside cover
Type: Set of values
together with operations on them.

Type integer:

values: ..., –3, –2, –1, 0, 1, 2, 3, ...

operations: +, –, *, /, unary –

God’s integers!
Can represent them in many ways —
decimal, binary, octal, maybe as strokes |||| (that’s 4)

Do you know how your computer represents them?
The integers as the basis

Leopold Kronecker (1823-1891), Prussian mathematician,

Argued that arithmetic and analysis should be founded on the whole numbers (integers):

Die ganzen Zahlen hat der liebe Gott gemacht, alles andere ist Menschenwerk.

The beloved God made the whole numbers, everything else is the work of man.

He insisted on the constructibility of math objects. Real numbers —do they really exist?
You can’t compute most of them because they have an infinite number of digits.
Type: Set of values
together with operations on them.

Matlab and Python are **weakly typed**: One variable can contain at different times a number, a string, an array, etc. One isn’t so concerned with types.

Java **strongly typed**: A variable must be declared before it is used and can contain only values of the type with which it is declared.

- **Valid Python sequence:**
  - `x = 100;`
  - `x = 'Hello World';`
  - `x = (1, 2, 3, 4, 5);`

- **Corresponding Java**
  - `int x;`
  - `x = 100;`
  - `x = "Hello";`

- **Illegal assignment:**
  - “Hello” is not an **int**

- **Declaration of x:**
  - `x` can contain only values of type **int**
Weakly typed versus strongly typed

**Weakly typed:**
Shorter programs, generally.
Programmer has more freedom, language is more liberal in applying operations to values.

**Strongly typed:**
Programmer has to be more disciplined. Declarations provide a place for comments about variables.
More errors caught at compile-time (e.g. it’s a syntax error to assign a string to an `int` variable).

Note: weak and strong typing not well defined; literature has several definitions
Type: Set of values
together with operations on them.

Java Type int:
values: \(-2^{31} \ldots 2^{31} - 1\)
operations: +, -, *, /, %, unary -

Java designers decided on this Principle: primitive operations on type int should yield an int.

\[ b \% c : \text{remainder when } b \text{ is divided by } c. \]
\[ 67 \% 60 = 7 \]
Most-used ‘primitive’ types

**int**: values: \( -2^{31} \ldots 2^{31} - 1 \)
operations: +, −, *, /, %, unary −

**double**: values like: \(-22.51E6, 24.9\)
operations: +, −, *, /, %, unary −

**char**: values like: 'V', '$', '
operations: none

**boolean**: values: true, false
operations: ! (not), && (and), || (or)

\[ b \% c : \text{remainder} \]
when \( b \) is divided by \( c \).
\[ 67 \% 60 = 7 \]

Write values in “scientific notation”

Use single quotes for type char.
'\n' is new-line char

Can’t use integers as booleans!
About ‘primitive’ type int

**int**: values: $-2^{31}$ .. $2^{31}-1$, i.e.
operations: +, −, *, /, %, unary −

**Integer.MAX_VALUE**: name for max int value: $2^{31}-1$: 2147483647

**Integer.MAX_VALUE + 1** is $-2^{31}$: -2147483648  WRAP-AROUND
### Primitive number types

**Integer types:**
- **byte**: 1 byte
- **short**: 2 bytes
- **int**: 4 bytes
- **long**: 8 bytes

**Real types:**
- **float**: 4 bytes
- **double**: 8 bytes

Use these to save space.

Have an array of 1,000,000 integers in range 0..7?

Use a **byte** array rather than an **int** array.
Casting among types

(int) 3.2 casts double value 3.2 to an int

any number type  any number expression

narrow may be automatic cast  wider

byte short int long float double

must be explicit cast, may truncate

(int) is a unary prefix operator, just like –

– – 3 evaluates to 3
– (int) 3.2 evaluates to –3
Char is a number type!

char is a number type: \( (\text{int}) 'V' \)  \( (\text{char}) 86 \)

Unicode repr. in decimal: 86

Unicode: 16-bit char repr. Encodes chars in just about all languages. In java, use hexadecimal (base 16) char literals:

'\u0041' is 'A'
'\u0042' is 'B'
'\u0056' is 'V'
'\u0024' is '$'

'\u0950' is 'ॐ' —Om, the sound of the universe
'\u0950' is 'ॐ'

'\u5927' is '大'
'\u885b' is '衛'

—大衛 is (I think) a transliteration of David into Chinese (Da Wei)

See www.unicode.org
**Basic variable declaration**

**Declaration**: gives name of variable, type of value it can contain

- `int x;`  
  Declaration of `x`, can contain an `int` value

- `double area;`  
  Declaration of `area`, can contain a `double` value

- `int[] a;`  
  Declaration of `a`, can contain a pointer to an `int` array. We explain arrays much later

| x  | 5  | int | area | 20.1 | double | a  | int[] |
Assignment statement

Much like in other languages — need ‘;’ at end:

```
<variable> = <expression> ;
```

```c
int x;
x = 10;
... other code
x = x + 1;
```

Have to declare x before assigning to it.

```c
int x = 10;
... other code
x = x + 1;
```

Can combine declaration with an initializing assignment. Shorthand for a declaration followed by an assignment.
Assignment statement type restriction

Every expression has a type, which depends on its operators and the types of its operands in a natural way.

**Rule:** In $x = e$; type of $e$ has to be same as or narrower than type of $x$. Reason: To avoid possibly losing info without the programmer realizing it.

```plaintext
double y = 5 + 1;  # The value of 5+1 is automatically cast from type int to type double.

int x = 75.5 + 1;  # Illegal: The exp value is of type double.

int x = (int) (75.5 + 1);  # You can cast to int explicitly. 76 will be stored in x.
```
A function in Matlab, Python, and Java

**Matlab**

```matlab
function s = sum(a, b)
    % Return sum of a and b
    s = a + b;
end
```

**Python**

```python
def sum(a, b):
    """ return sum of a and b""
    return a + b
```

**Java**

```java
/** return sum of a and b */
public static double sum(double a, double b) {
    return a + b;
}
```

- **Specification:** in comment before function
- **Return type:**
- **Declarations of parameters a and b**
