

CS 311O

Pattern Matching

Nate Foster

Spring 2019

Today's music: *Let It Go* by Idina Menzel

A0

- The exercises ask you to implement several simple functions
- Mostly designed to get used to writing (compiling, testing, etc.) code in Ocaml
- Also introduces the standard harness we distributed with each assignment (Makefile, check*.sh scripts, etc.)
- Staff can give you the “gist” at consulting hours over the next few days.
- Due next Friday

Level Up!

- Next week, Anna Fang and other senior members of the staff will begin offering weekly, *optional* enrichment sessions on a variety of topics
 - git
 - Shell tools
 - Makefiles
 - Study strategies
 - Graduate School
- Thursday, Feb 7th @ 7-8pm, Gates 310

Instant Access Textbook

You'll be writing an essay on this text book... due part-way through the semester.

Textbook vs. lecture

Section & lecture attendance

about **1%** each: **incentive** not penalty

Review

Previously in 3110:

- Expressions, definitions
- Scope
- Functions

Today:

- Data types for collections: lists, records, tuples
- **Pattern matching**

Collections

	Homogenous elements	Heterogenous elements
Fixed number of elements		Tuples and records
Unbounded number of elements	Lists	

LISTS

List implementation

- **Immutable:** can't change elements
- **Singly-linked:**
 - Good for sequential access of short-to-medium length lists (say, up to 10k)
 - Data structures are tools: none is perfect
- **Terminology:** nil and cons (from Lisp)
- Next lecture: we'll see the implementation

RECORDS

TUPLES

Records

vs.

Tuples

by name

vs.

by position

Records and tuples

- New kind of definition: type definition
- New kinds of types: record types, tuple types

Collections

	Homogenous elements	Heterogenous elements
Fixed number of elements		Tuples and records
Unbounded number of elements	Lists	

Syntax and semantics: all in the textbook

PATTERN MATCHING

Deconstructing data

Upcoming events

- [Now] A0 is out!
- [Thu] Foster OH @ 1:15-2:15 in Gates 432
- [Fri] Recitations 2 & 3 due on CMS

This is incredible.

THIS IS 3110
