Lecture 25

Level Design
What is Level Design?

- **Layout of game geography**
  - Location and relationship of challenges
  - Movement of dynamic features (e.g. NPCs)

- **Understanding of player capabilities**
  - Abilities, mechanics available to the player
  - Assumptions of current player skill level

- **Layout of player progression**
  - How the player should move through the game
  - How the player visualizes this progression
Aspects of Game Design

• Games as Exploration
  • Focuses on game geography and capabilities
  • Typically involves heavy storyboarding

• Games as Education
  • Train player skill and understanding
  • Focuses primarily on player capabilities

• Games as Storytelling
  • Focuses on player progression
  • Most challenging element of game design
Aspects of Game Design

- Games as **Exploration**
  - Focuses on game *geography* and *capabilities*
  - Typically involves heavy storyboarding

- Games as **Education**
  - Train player skill and understanding
  - Focuses primarily on *player capabilities*

- Games as **Storytelling**
  - Focuses on player progression
  - Most challenging element of game design
  - For a later lecture
Aspects of Game Design

- **Games as Exploration**
  - Focuses on game *geography* and *capabilities*
  - Typically involves heavy storyboarding

- **Games as Education**
  - Train player skill and understanding
  - Focuses primarily on *player capabilities*

- **Games as Storytelling**
  - Focuses on *player progression*
  - Most challenging element of game design
Players Want to Explore the World

• Exploring the **physical space**
  • What happens when I go here?
  • **Example**: Any western RPG
  • But does not require complex game world

• Exploring the **ludic space**
  • What happens when do this action?
  • Requires deep, complex interactions
  • **Example**: Buckets in Skyrim
Storyboarding

- Diagrams player action throughout level
  - Different from film storyboarding
  - Currently a bunch of *informal practices*

- **Embodied Action**
  - Action that is tied to a character/avatar
  - Typically maps player movement in level

- **Disembodied Action**
  - Action corresponding to UI elements
  - **Example**: Buttons, menus
Embodied Action: Single Scene

Level Design
Embodied Action: Multiple Scenes

Point light
Move, Plug in
Move, grab lights

Point light
walk
win.
**Disembodied Action: Cause and Effect**

- **Draw the initial scene**
  - Could be the entire level
  - Zoomed in portion of screen
  - Must capture area that will be affected by the action

- **Indicate the action**
  - Draw mouse pointer
  - Indicate gamepad button
  - Annotate with a “tool tip”

- **Draw the action effect**
  - Change in initial scene
Game Geography

- Relations of game challenges
  - Multiple challenges in a level
  - Flow of level progression
- Easiest to design *discretely*
  - Well defined player paths
  - Some deviation allowed
  - Storyboard indicates paths
- Ensure *meaningful choice*
  - More than one path works
  - Balance the risk vs. reward
Design Patterns

- Design uses building blocks
  - Mechanic/challenge pairs
  - Start and end location
  - String together to make level

- Key building block features
  - Requires verb/interaction
  - Must be possible to *fail*
  - Difficulty is *tunable*

- **Patterns** are common blocks
  - Appear many times in game
  - Even across multiple games
Design Pattern Examples

Platformer

Stealth Game

- Tricky Jump
- Start
- End

- Start
- End
- Avoid Detection
Design Pattern Examples

Shooter/Action Game

- Cover
- Cover
- Cover
- Kill Enemies

Racing Game

- Cover
- Gain Speed
- Brake
Dash: Basic Design Patterns
**Dash**: Putting it All Together

Legend:
- **Player**: Blue
- **Wanderer**: Yellow
- **Shielded**: Green
- **Chaser**: Red
- **Shooter**: Black
- **Object**: Green

Level Design

1. **Player Path**
2. **Enemy Path**
3. **Point Along Enemy Path**
4. **Lantern**
5. **Finish**
Composite Patterns

- Piecewise design creates a very linear feel
  - Pattern A followed by Pattern B followed by...
  - Player is explicitly aware of building blocks

- Composite patterns allow for variations
  - Two patterns combined in the same space
  - Makes original pattern much more difficult
  - Player now has to react to them both

- Reading: Extended/Evolutionary Challenge
Composite Patterns

Platformer

Interceptor

Force Jump

Stealth Game

Chaser
Composite Patterns

Shooter/Action Game

Level Design
But Actually…

[refugeinaudacity.wordpress.com]

Level Design
Aspects of Game Design

- **Games as Exploration**
  - Focuses on game geography and capabilities
  - Typically involves heavy storyboarding

- **Games as Education**
  - Train player skill and understanding
  - Focuses primarily on player capabilities

- **Games as Storytelling**
  - Focuses on player progression
  - Most challenging element of game design
Learning How to Play

- Mechanics are (often) new and unfamiliar
  - Players have to learn how to interact with them
  - Aside: why innovation is not always popular

- Players could learn by reading the *manual*
  - This is boring! Let me play already

- **Tutorial levels** allow the player to...
  - Get started playing immediately
  - Learn the mechanics while playing
Classic Approach: Restrict the Player

- Start with your **gameplay specification**
  - Remove all but the barest mechanics
  - Remove verbs by disabling controls
  - Remove interactions by omitting "board elements"

- Levels add new mechanics back one at a time
  - **Example**: Platformer with a "no-jump" level

- Do not need to add a new mechanic each level
  - "Deep" mechanics allow many levels per mechanic
  - This can influence game geography (e.g. worlds)
Example: Starcraft Campaign
Explicit Restrictions

• Mechanics are unavailable for current level
  • Controls for actions are explicitly disabled
  • Interactions disabled, even if elements present

• Motivation: Prevents player confusion
  • Do not waste time on useless mechanics
  • Key in the casual and young audience

• Examples: Many AAA commercial games
  • Starcraft single-player campaign
  • Portal (integrated into story)
Implicit Restrictions

• Mechanics are always available, but not needed
  • Challenges designed for an explicit mechanic
  • Other mechanics may succeed, but they are harder
  • Level has hints to guide player to right mechanic

• Motivation: Allow replay in tutorial levels
  • Players go back and try optional approaches
  • Achievements are structured to encourage this

• Example: Many amateur Flash games
  • *My First Quantum Translocator*
The Tyranny of Choice

• Too much choice can make us unhappy
  • We are often paralyzed by what to do
  • Studied by Myers & Lane; popularized by Barry Schwartz

• But games are about meaningful choice
  • Problem is when choices are too similar
  • Good choices must be significantly different
  • Example: Dagger adds +1 bonus to a stat of 102

• Players use rough heuristics for making choices
  • Pattern match current situation to determine action
Portal 2 Mechanics

Level Design
Reinforcement

How long to “dwell” on mechanic before a new one?

Actions:
A = jump  B = dash

A  B  vs.  A  A  A  A  B
Recombination

How often to combine with other mechanics

Actions:
A = jump   B = dash   C = shoot fireball

A B C vs. A AB ABC
Reinforcement vs. Recombination

Reinforcement:

A
A
A
B
B
B
B

A
B
C
D
E

Recombination:

A
A
B
B
AB
AB
AB

A
AB
ABC

A
AB
ABC
ABCD
ABCD
ABCD
Robot Unicorn Attack
Robot Unicorn Attack Progression

Mechanics:

A = jump       B = dash

A A A A B A A B

High reinforcement, low recombination
Hello Worlds!
game design initiative at cornell university
Hello Worlds

Mechanics:
A = move  B = two worlds  C = close world

A  AB  AB  ABC  ABC

Moderate reinforcement, high recombination
Starcraft
Starcraft

Low reinforcement, high recombination
Next Time…

- **Games as Exploration**
  - Focuses on game *geography* and *capabilities*
  - Typically involves heavy storyboarding

- **Games as Education**
  - Train player skill and understanding
  - Focuses primarily on *player capabilities*

- **Games as Storytelling**
  - Focuses on *player progression*
  - Most challenging element of game design
