# Development Process

# Software Development

---

- **Design** process
  - Decide what game you want to make
  - Create a *specification* of your design
- **Development** process
  - Implement your specification
  - Test result to make sure it works
- **Release** (yeah!)

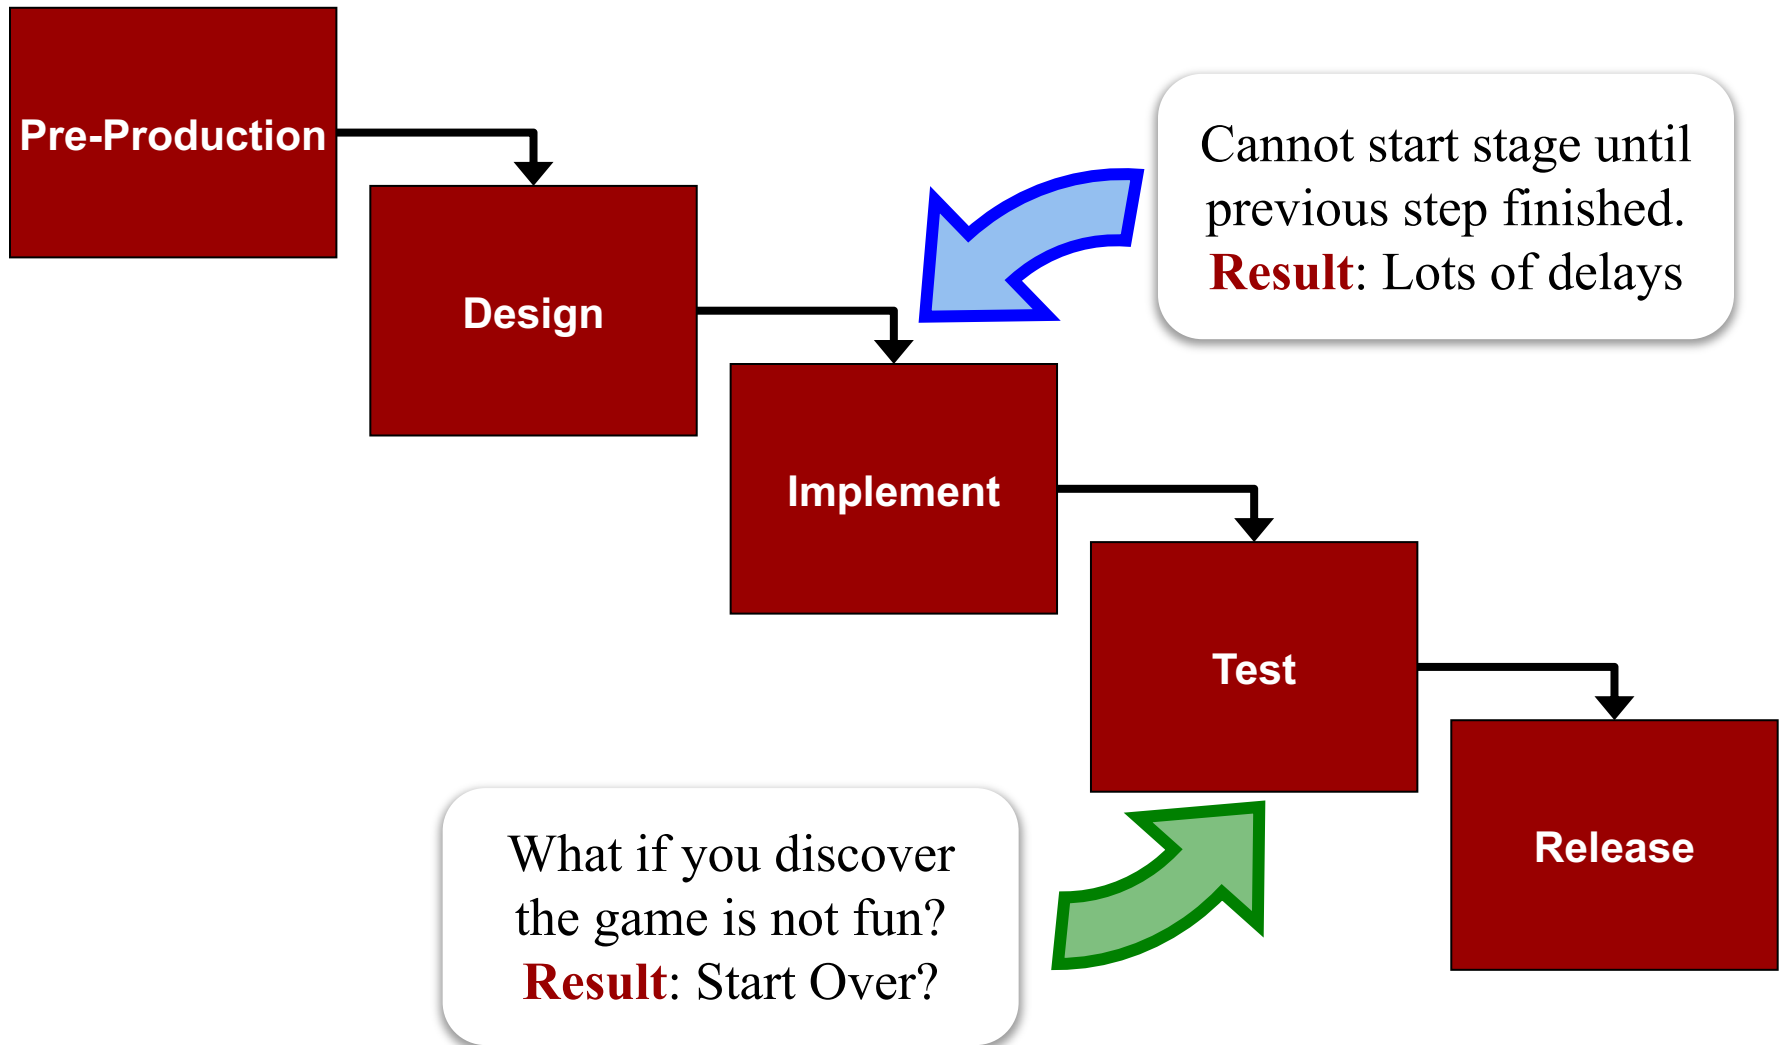

# The Traditional Model

---

- Document extensively; design to specification
  - Design and documents done before coding starts
  - Development follows a specified project timeline
- A general software engineering model
  - Often called the *waterfall* model

# Waterfall Model

# The Iterative Model

---

- Cannot evaluate game without playing it first
  - **Iterate**: Rethink design from intermediate results
- Should be playing 20% into development!
  - This requires *prototypes* (may be nondigital)

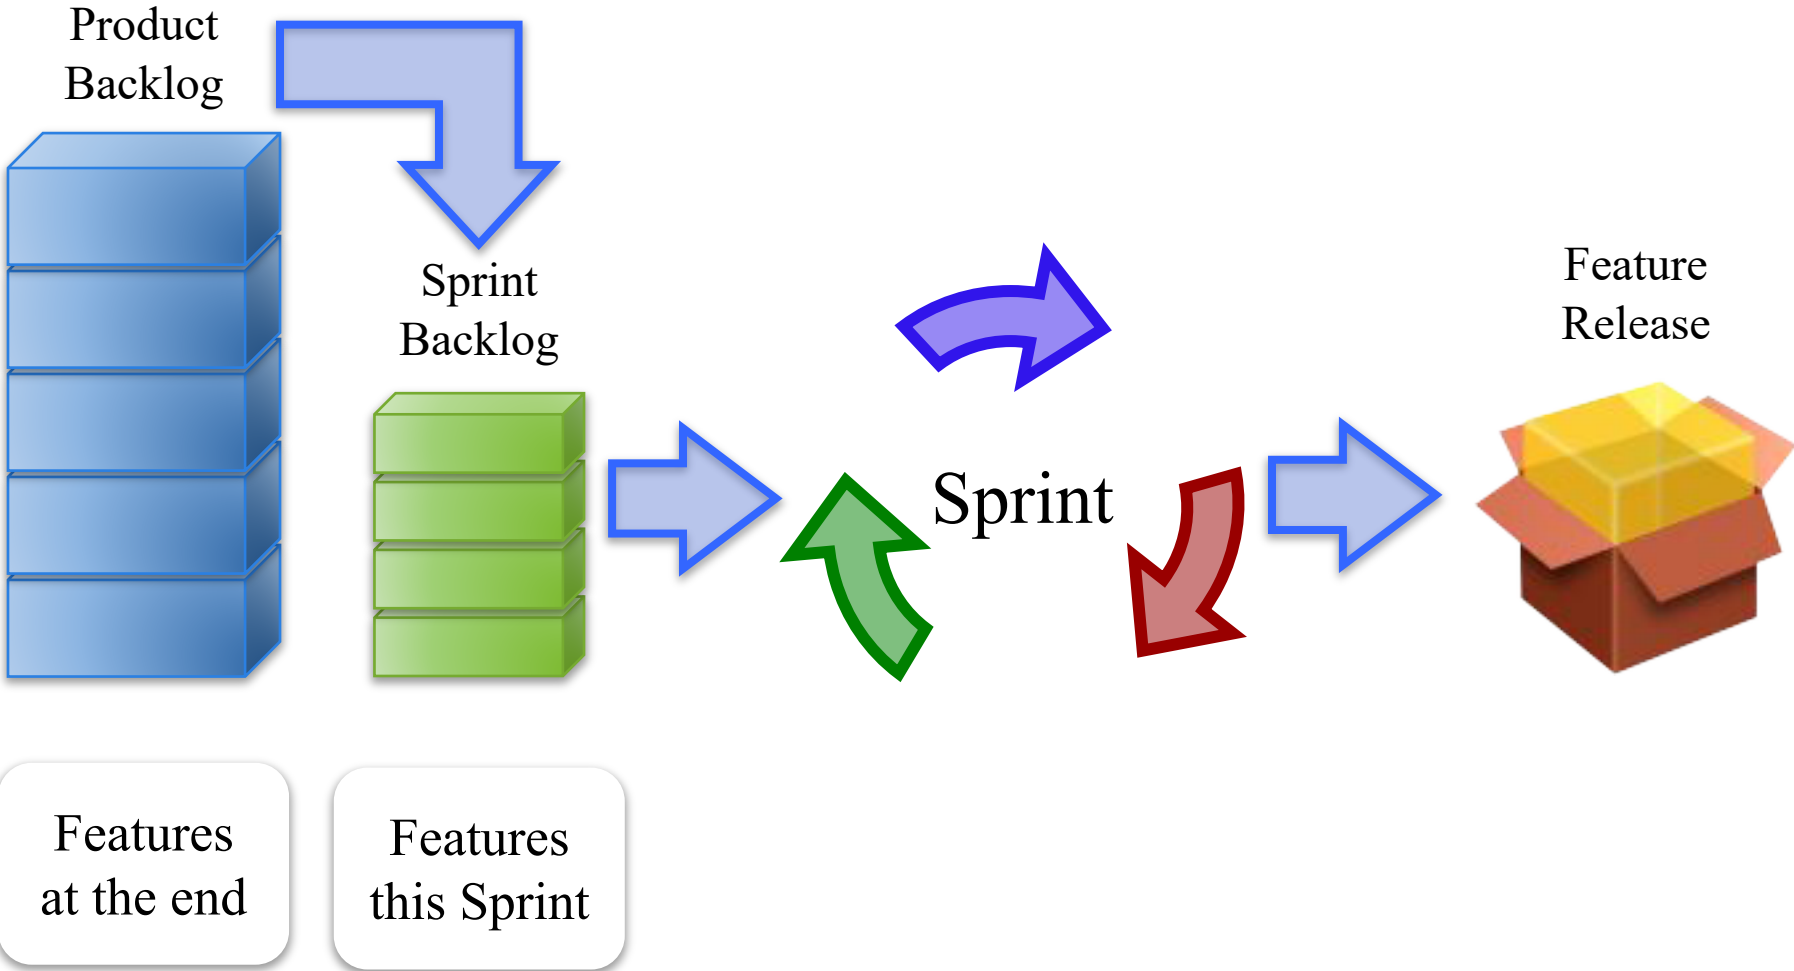

# SCRUM & Agile Development

---

- Iterative model is called **agile development**
  - The most popular agile method is **SCRUM**
- Key (but not only) idea: **SCRUM sprint**
  - Focus on a small, but testable deliverable
  - 3-4 weeks in industry; 2 weeks in this class
- **Sprint Backlog**: features left to implement
  - Chosen to implement for this sprint
  - Re-evaluate features at end of every sprint

# SCRUM Sprint

# Documentation

---

- Major part of the development process
  - Why course counts for technical writing
  - Ensures group is always on “same page”
- At every point of development
  - **Pre-production**: concept document, gameplay
  - **Sprints**: reports, architectural specification
  - **Release**: game manual, post-mortem
- Challenge is understanding your *audience*

# Pre-Production Documentation

---

- **Concept Document**

- Describes the basic idea behind your game
- Communicate core vision without too many details
- Focus of Communication Lab next week
- **Audience:** a game publisher (to get funding)

- **Gameplay Specification**

- Thorough overview of your gameplay
- Include formal design elements shown in class
- **May change as part of your sprints!**
- **Audience:** new team members (hired later)

# Sprint Documentation

---

- **Reports (every 2 weeks)**

- Outlines the upcoming sprint (who does what)
- Reflects on previous sprint (did you meet goals?)
- Written as a *group document*
- **Audience:** your game producer

- **CATME Reports**

- Online tool for reporting your progress
- Completed as *individuals*
- Allows us to look for problems in group

# Using CATME for Reports

## Report

# Detailed Specifications

---

- **Architecture Specification**

- Outline of your software organization
- Used to distribute tasks to programmers
- **Audience:** team programmers

- **Design Specification**

- Outline of your design vision
- Also includes technical details of asset handling
- Used for to help designers work together
- **Audience:** team designers

# Detailed Specifications

---

- **Architecture Specification**

- Outline of your software architecture
- Use cases and requirements
- **Audience:** team programmers

Directed by the **Lead Programmer**

- **Design Specification**

- Outline of your design vision
- Also includes detailed design
- Use cases and requirements
- **Audience:** team designers

Directed by the **Lead Designer**

# Release Documentation

---

- **Game Manual**

- Concise description of gameplay
- Instructions on how to play the game
- Story, other material to improve the setting
- **Audience:** your players

- **Postmortem**

- *Honest* reassessment of what happened
- What went right; what went wrong
- **Audience:** yourself (for next time...)

# Development Process Review

---

- **Pre-production**

- Initial design
- **Concept Document**
- **Gameplay Spec**

- **Two-Week Sprints**

- Playable prototypes
- **Reports**
- **Arch/Design Spec**

- **Release**

- Public Showcase
- **Game Manual**
- **Postmortem**
