

Gates and Logic

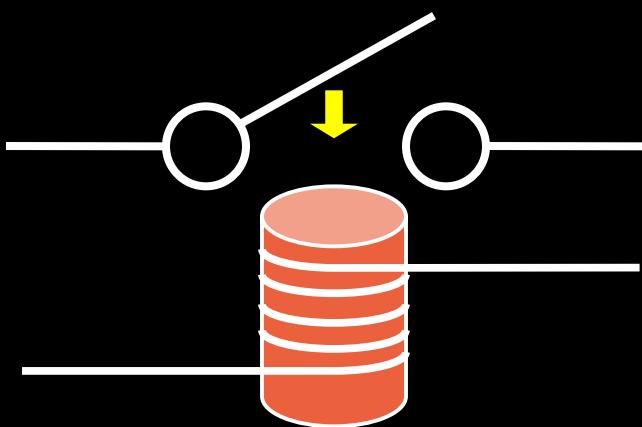

See: P&H Appendix C.2, C.3

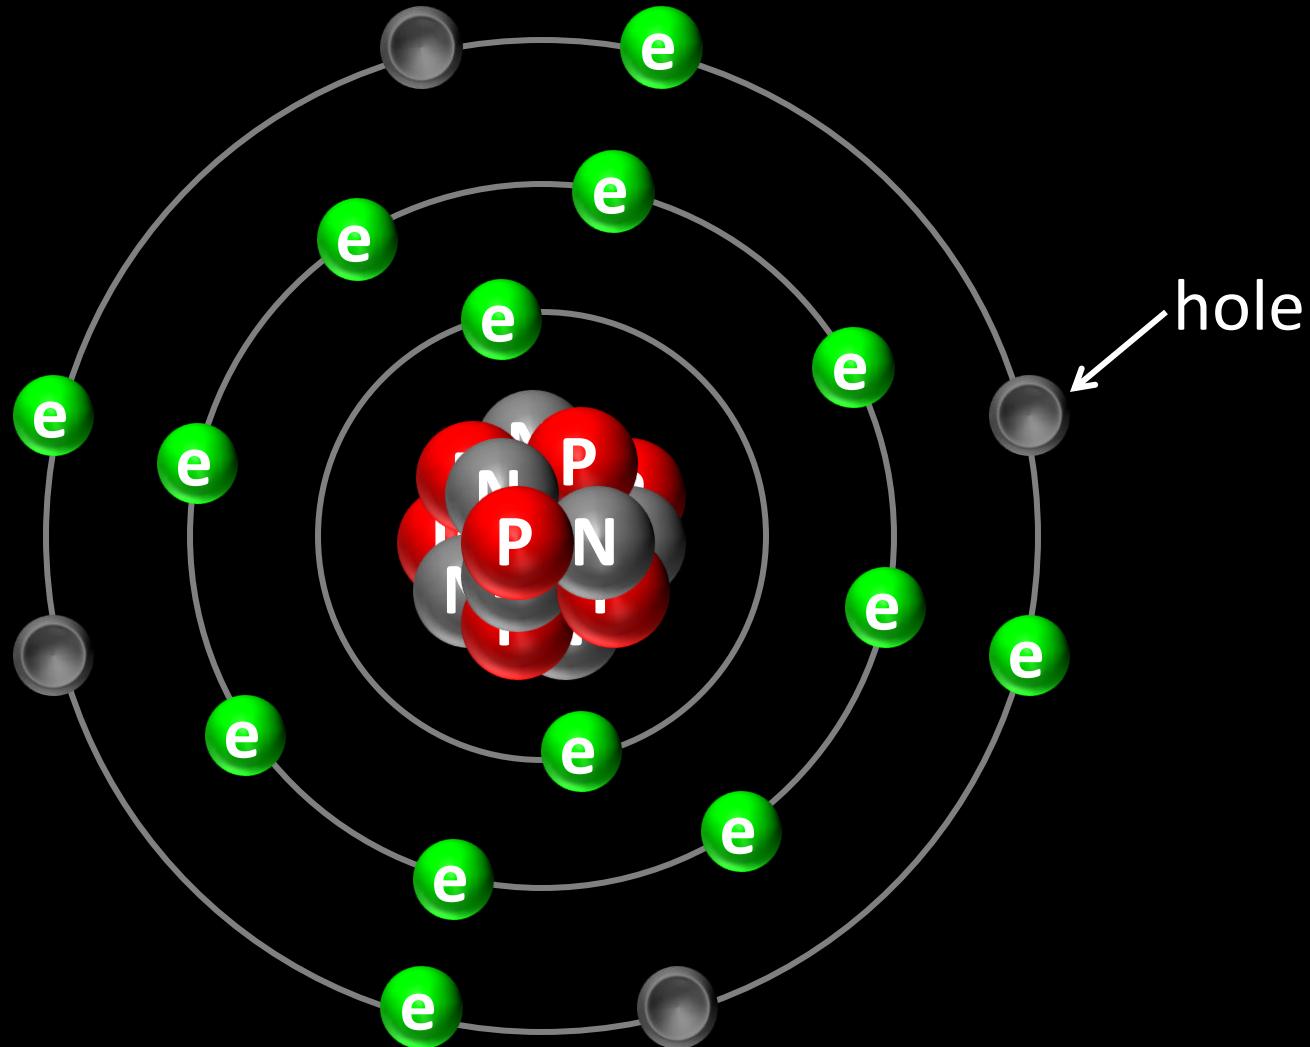

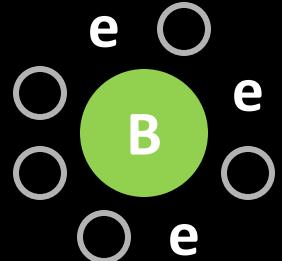

- Acts as a *conductor* or *insulator*
- Can be used to build amazing things...

- One current controls another (larger) current
- Static Power:
 - Keeps consuming power when in the *ON* state
- Dynamic Power:
 - Jump in power consumption when switching

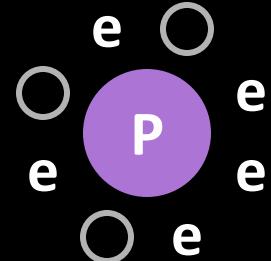

Boron

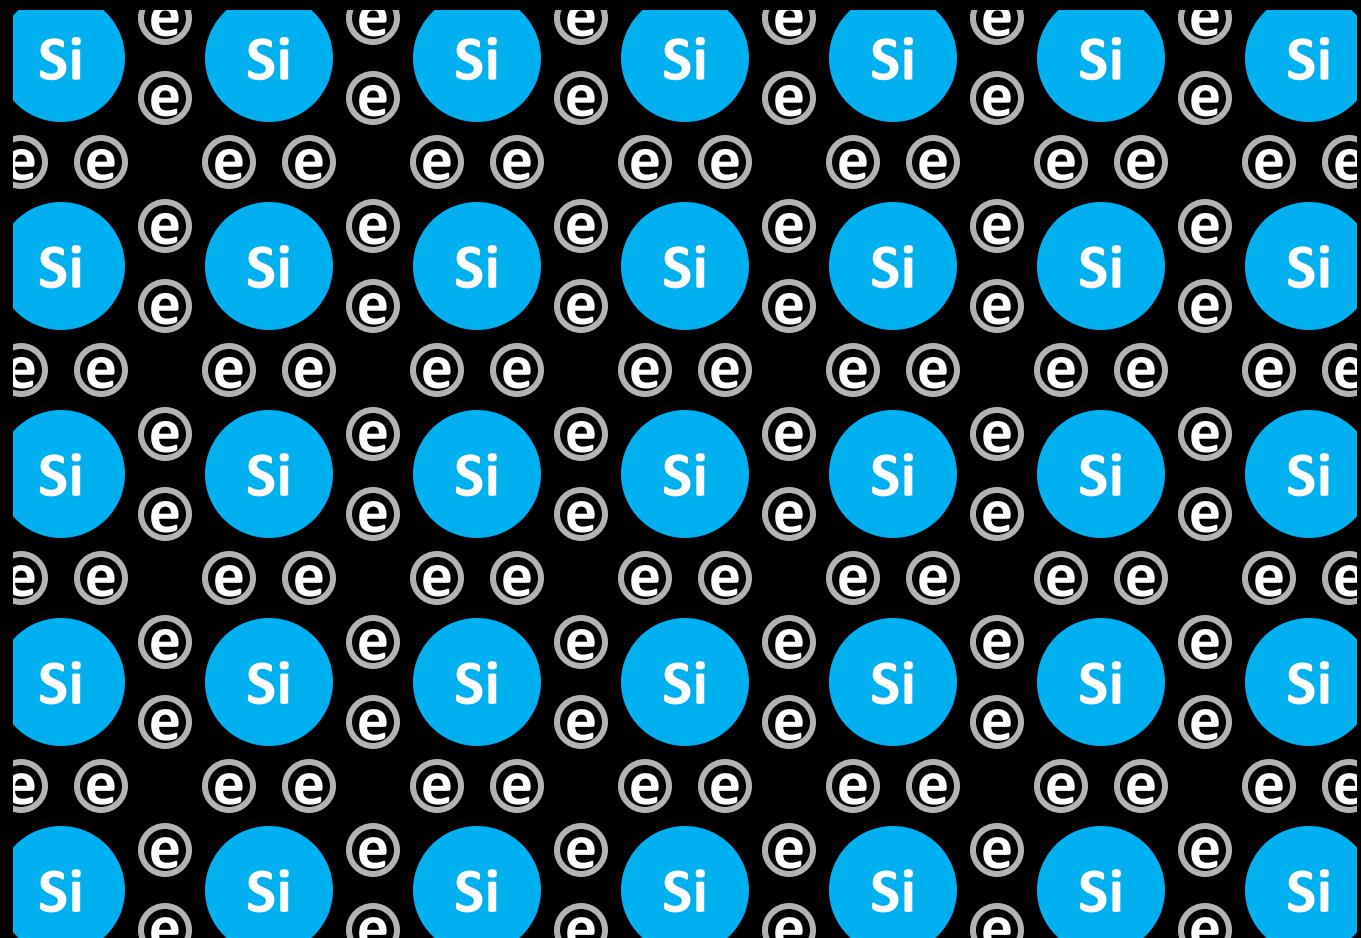

Silicon

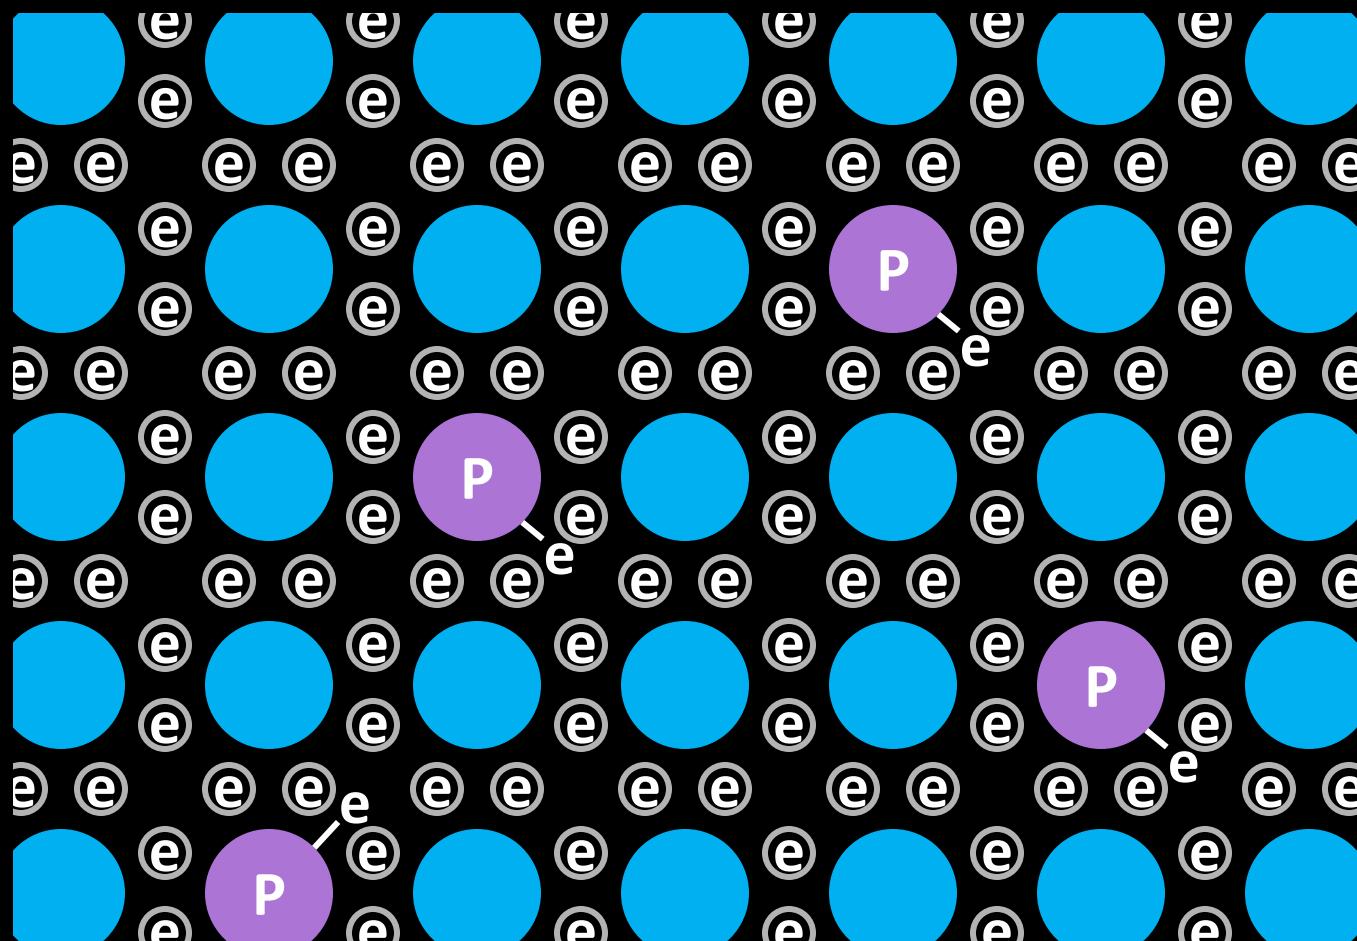

Phosphorus

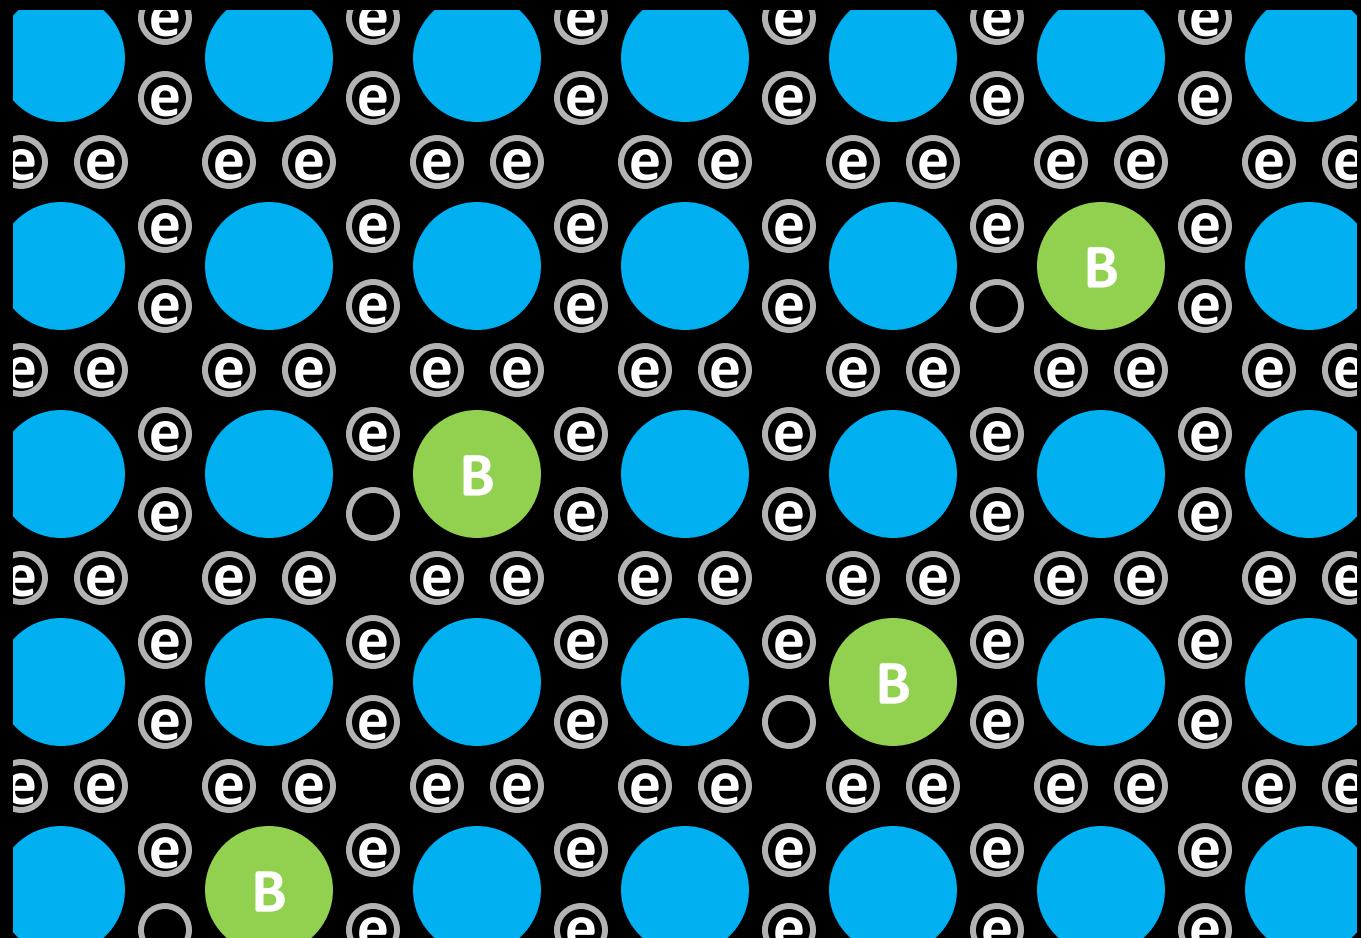

Silicon

N-Type: Silicon + Phosphorus

P-Type: Silicon + Boron

Insulator

Copyright © 2007 Theodore W. Gray

p-type (Si+Boron)
has mobile holes:

low voltage (depleted)
→ insulator

high voltage (mobile holes)
→ conductor

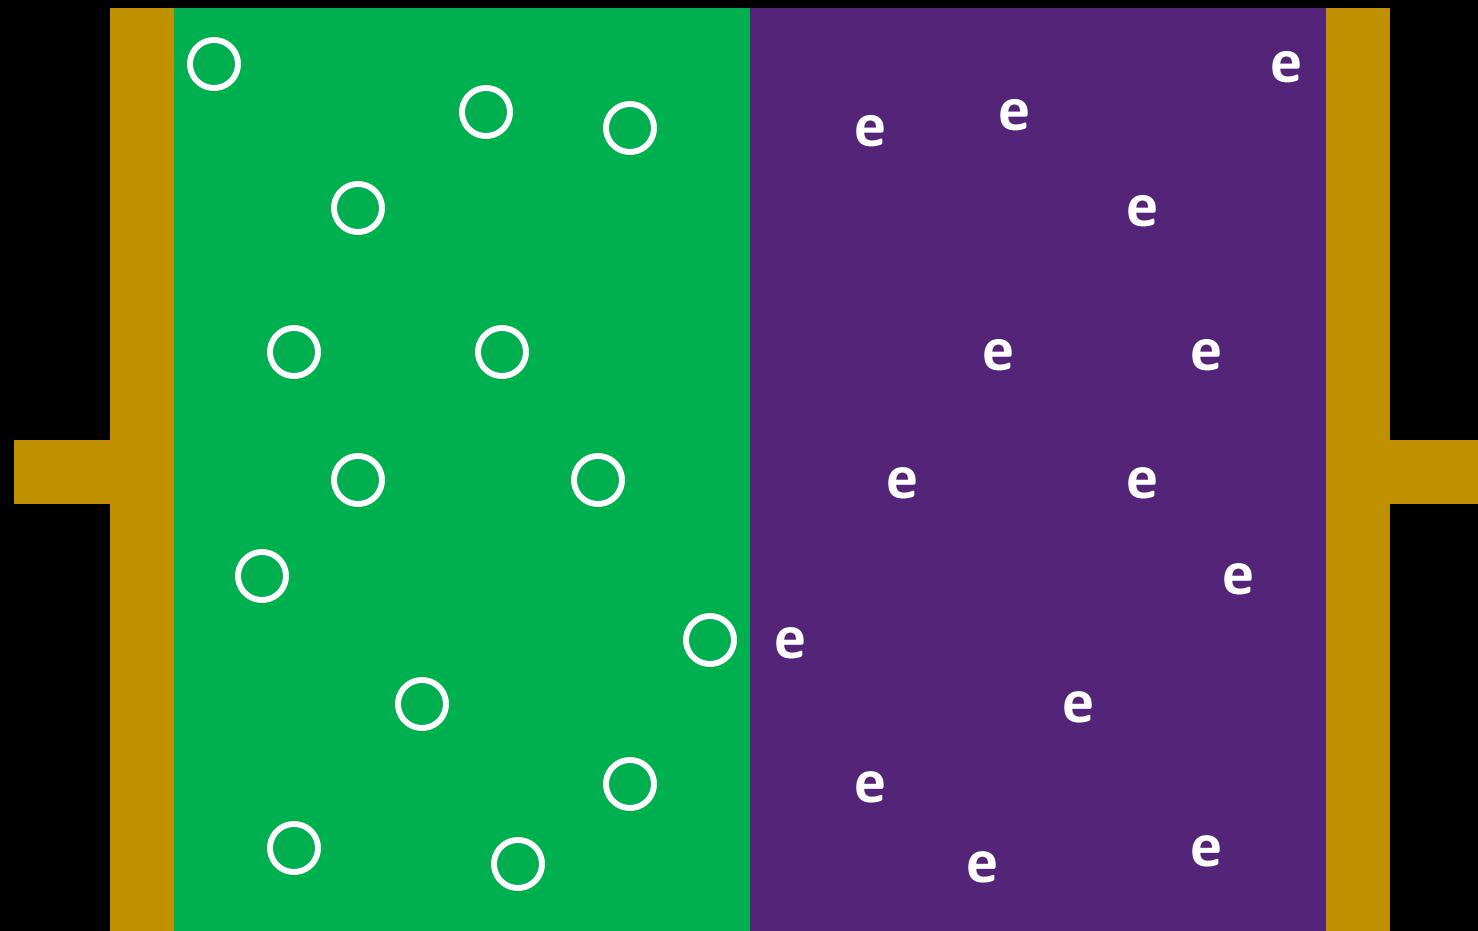

Copyright © 2007 Theodore W. Gray

n-type (Si+Phosphorus)
has mobile electrons:

low voltage (mobile electrons)
→ conductor

high voltage (depleted)
→ insulator

P-Type

low $v \rightarrow$ insulator

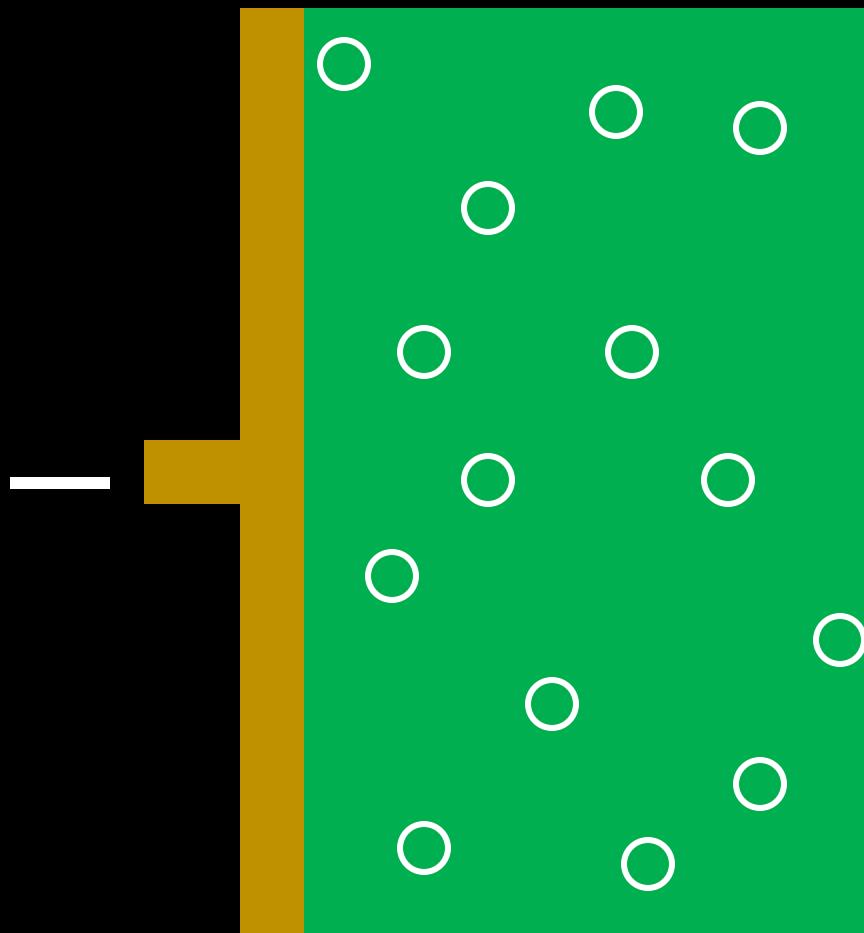

high $v \rightarrow$ conductor

N-Type

low $v \rightarrow$ conductor

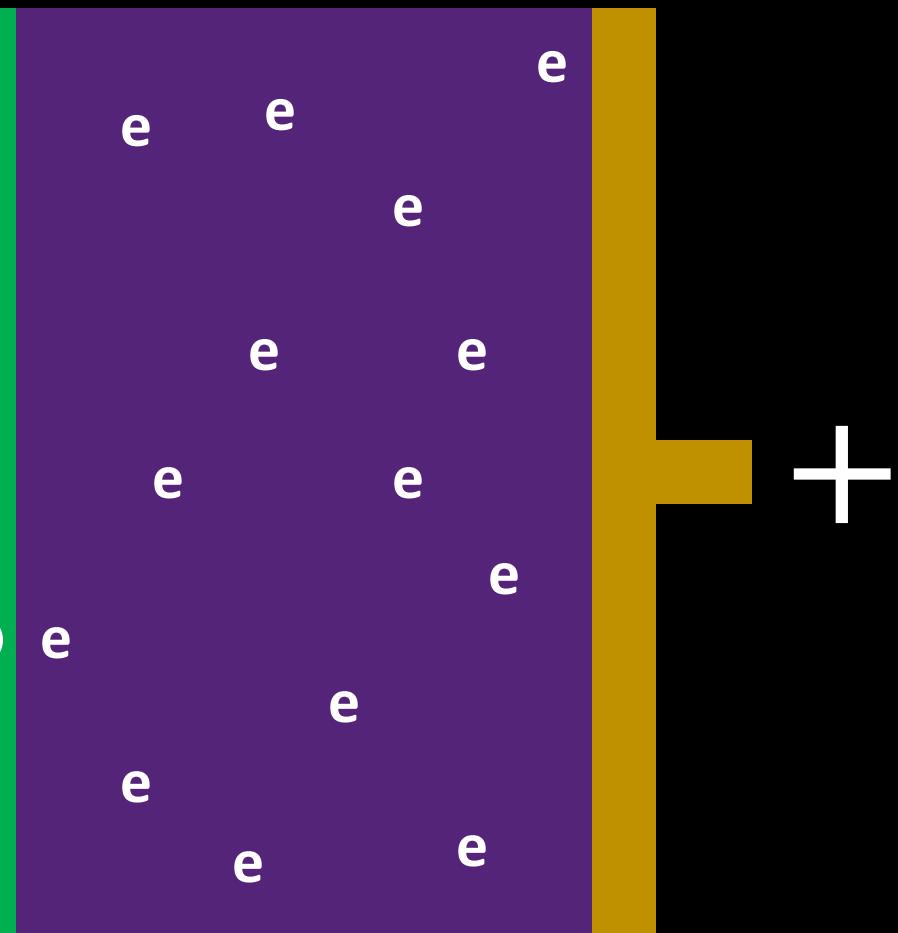

high $v \rightarrow$ insulator

P-Type

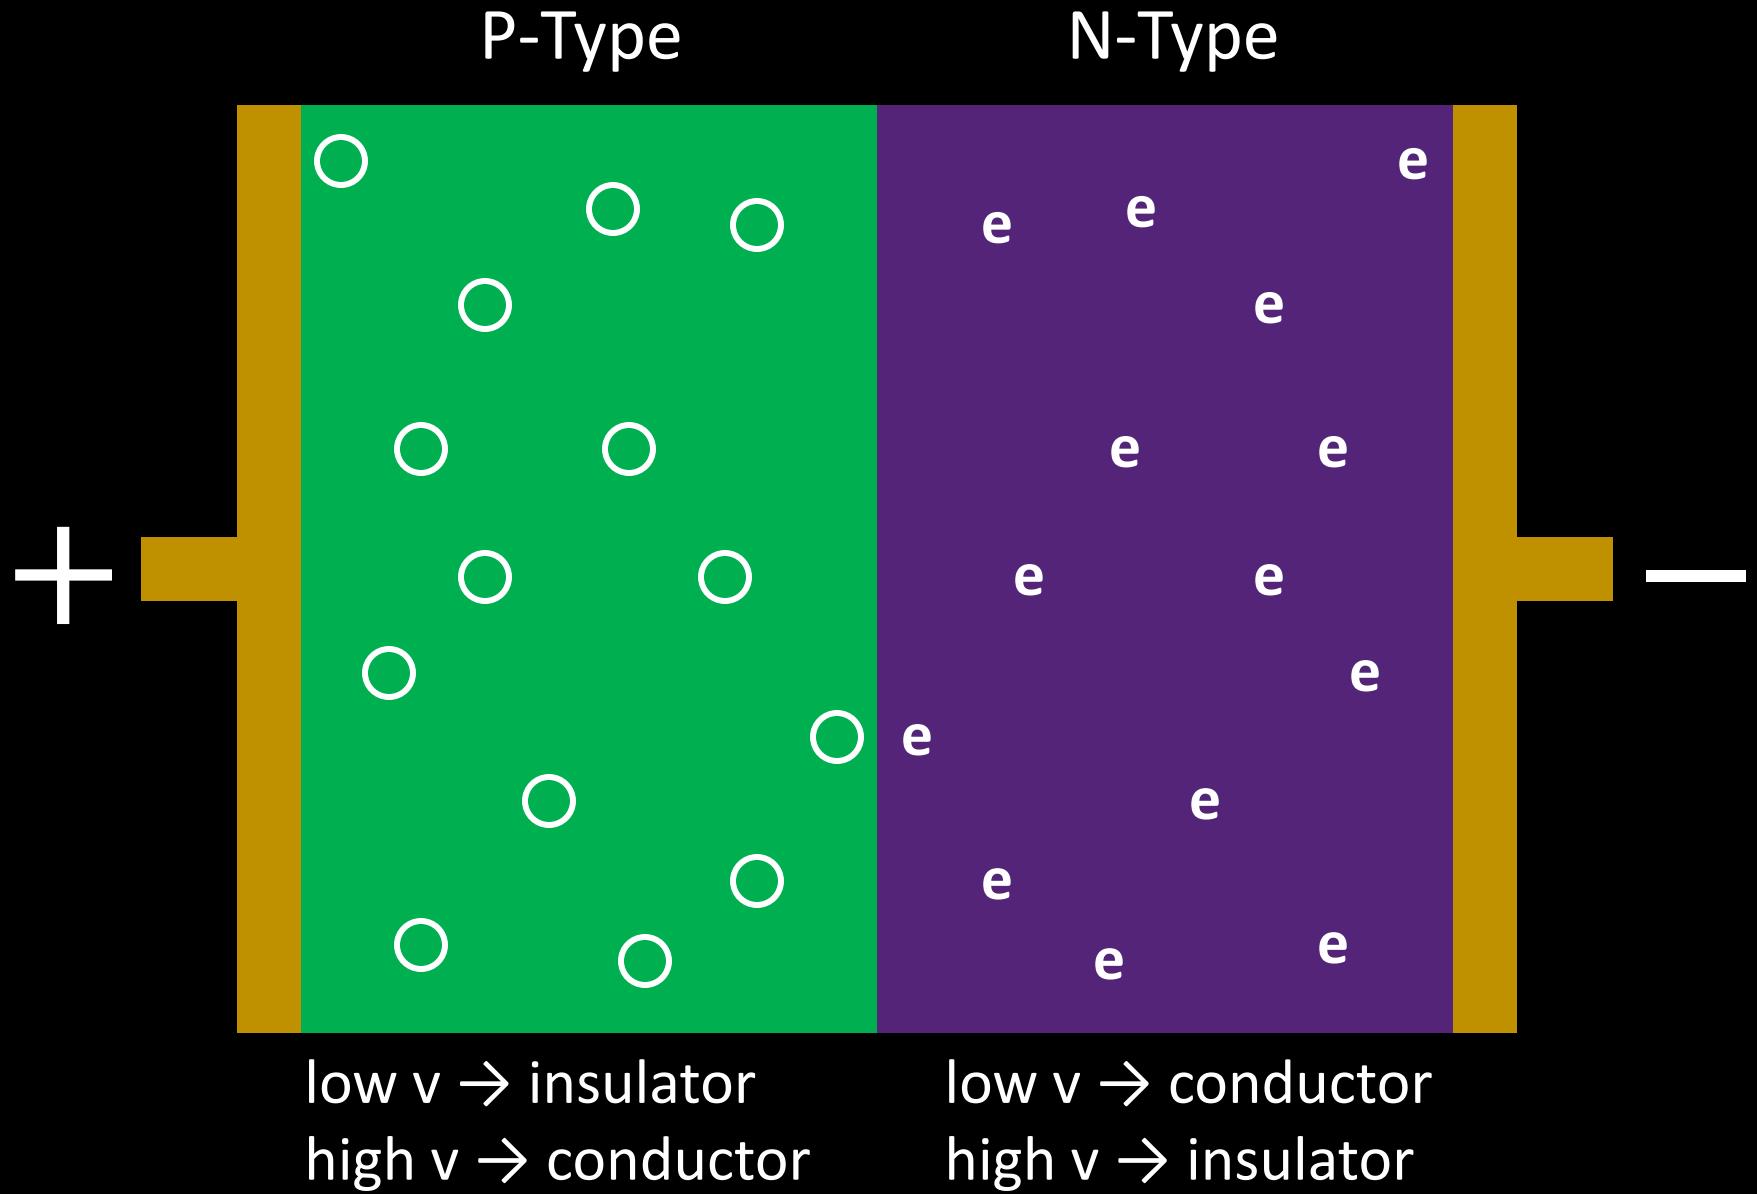

low $v \rightarrow$ insulator
high $v \rightarrow$ conductor

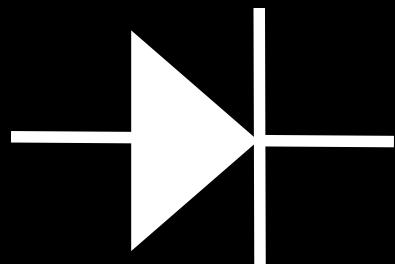

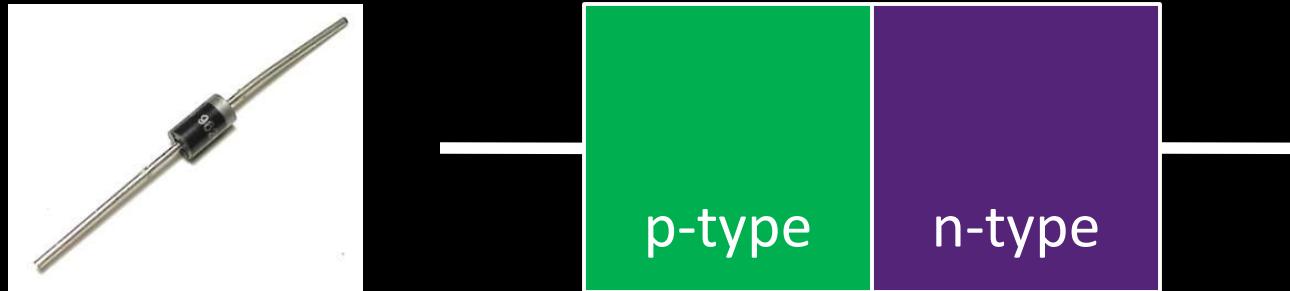

N-Type

low $v \rightarrow$ conductor
high $v \rightarrow$ insulator

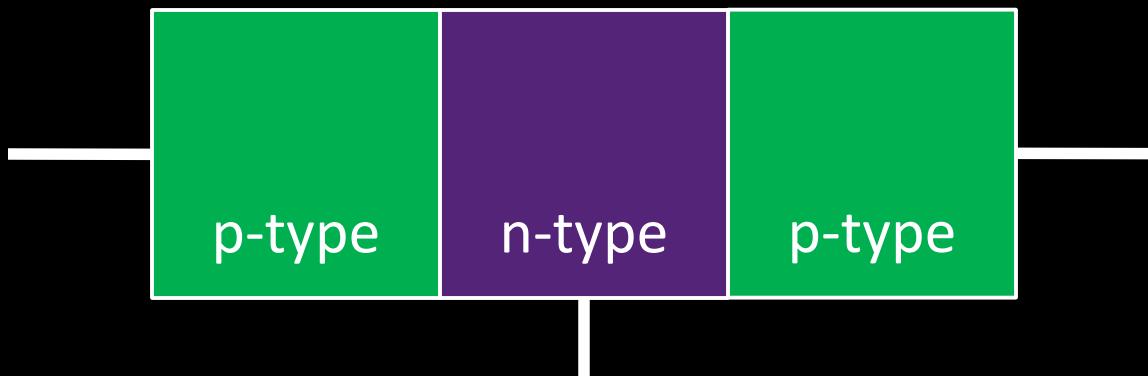

PN Junction “Diode”

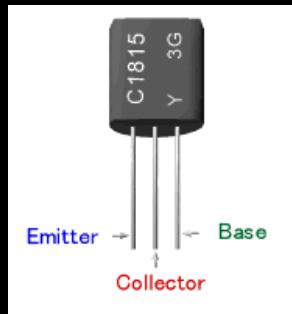

Conventions:

$v_{dd} = v_{cc} = +1.2v = +5v = hi$

$v_{ss} = v_{ee} = 0v = gnd$

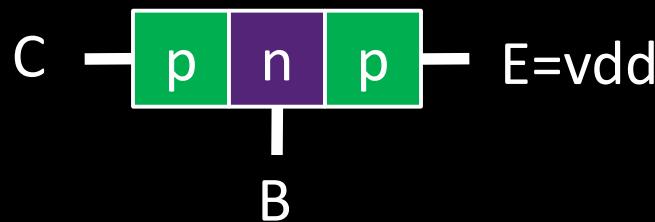

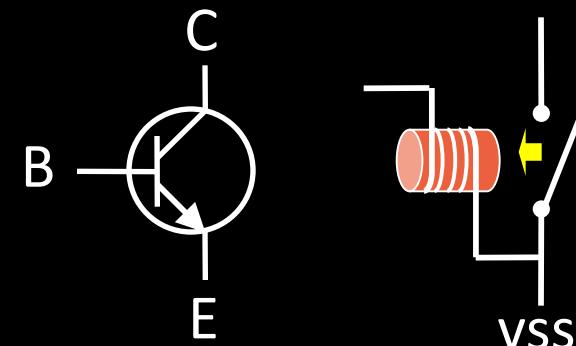

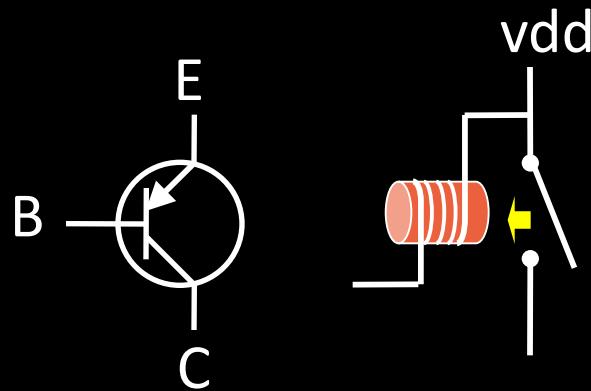

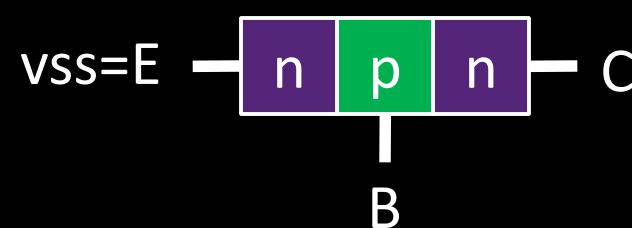

- Solid-state switch: The most amazing invention of the 1900s

Emitter = “input”, Base = “switch”, Collector = “output”

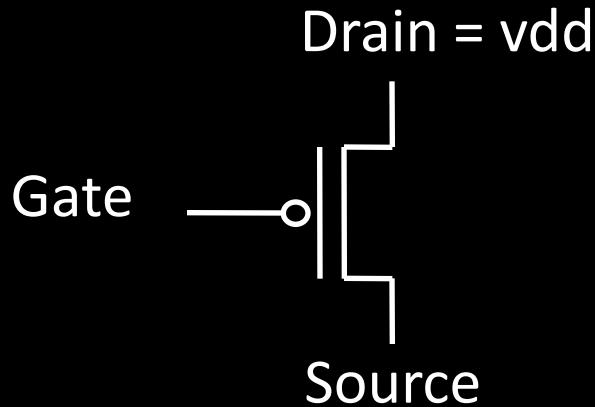

PNP Transistor

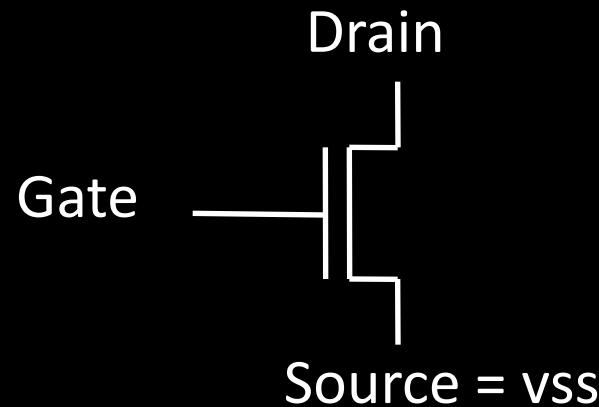

NPN Transistor

P-type FET

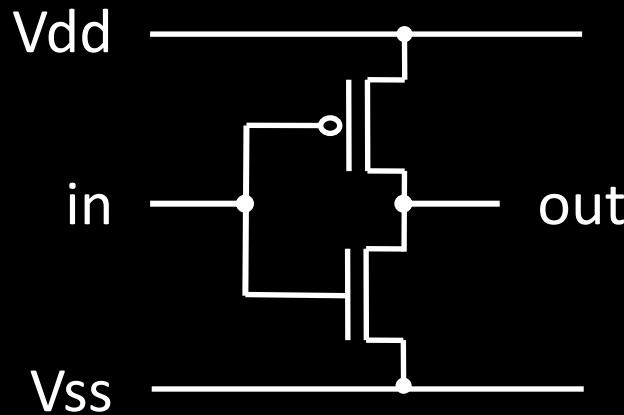

N-type FET

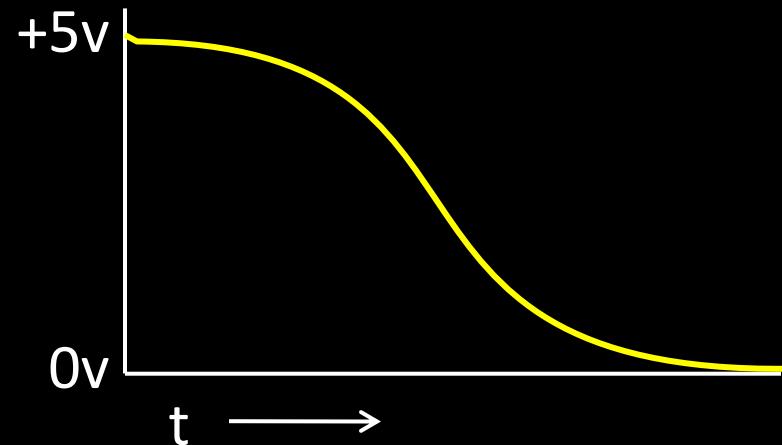

- Connect Source to Drain when Gate = lo
- Drain must be vdd, or connected to source of another P-type transistor

- Connect Source to Drain when Gate = hi
- Source must be vss, or connected to drain of another N-type transistor

| In | Out |
|----|-----|
| | |
| | |

voltage

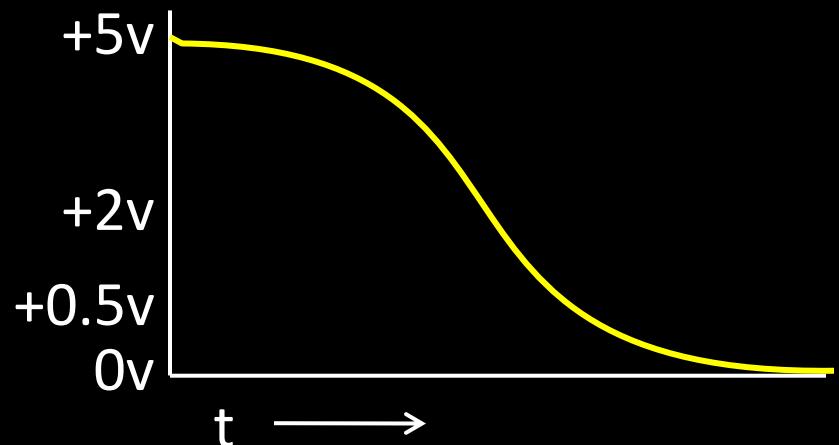

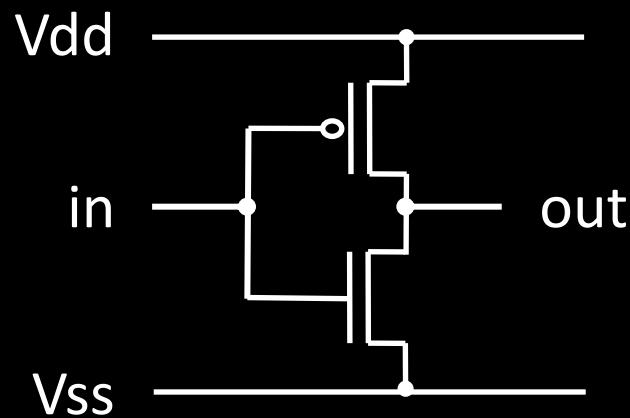

Gate delay

- transistor switching time
- voltage, propagation, fanout, temperature, ...

CMOS design

(complementary-symmetry metal–oxide–semiconductor)

- Power consumption = dynamic + leakage

| In | Out |
|-----|-----|
| +5v | 0v |
| 0v | +5v |

voltage

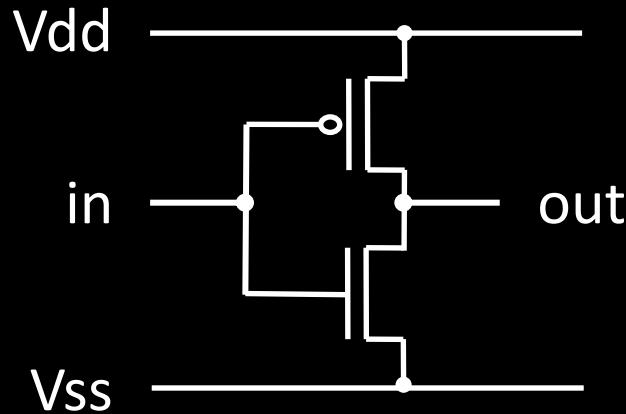

| In | Out |
|----|-----|
| | |
| | |

truth table

Conventions:

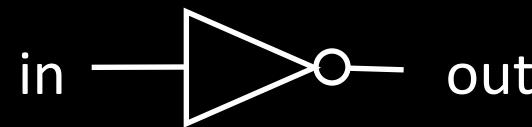

$V_{DD} = V_{CC} = +1.2V = +5V = \text{hi} = \text{true} = 1$

$V_{SS} = V_{EE} = 0V = GND = \text{false} = 0$

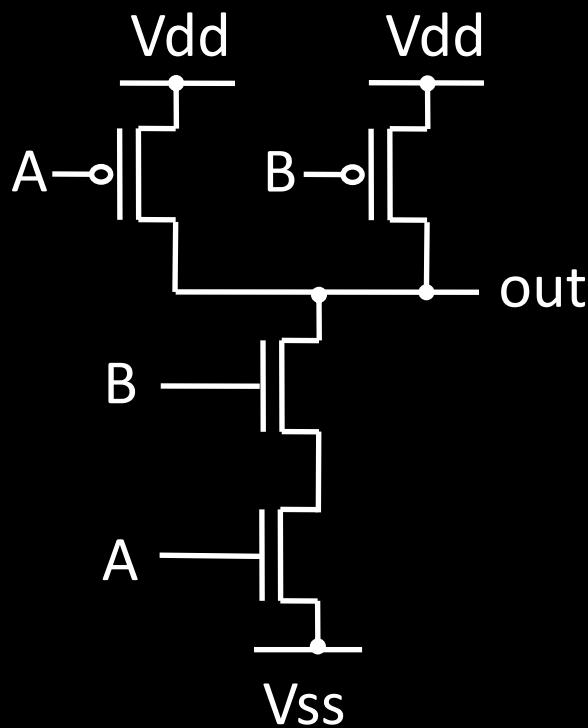

Function: NOT

- Symbol:

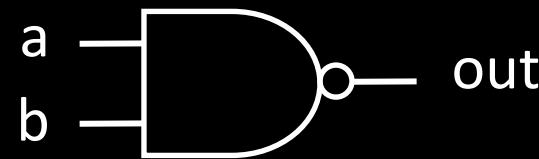

| In | Out |
|----|-----|
| 0 | 1 |
| 1 | 0 |

Truth table

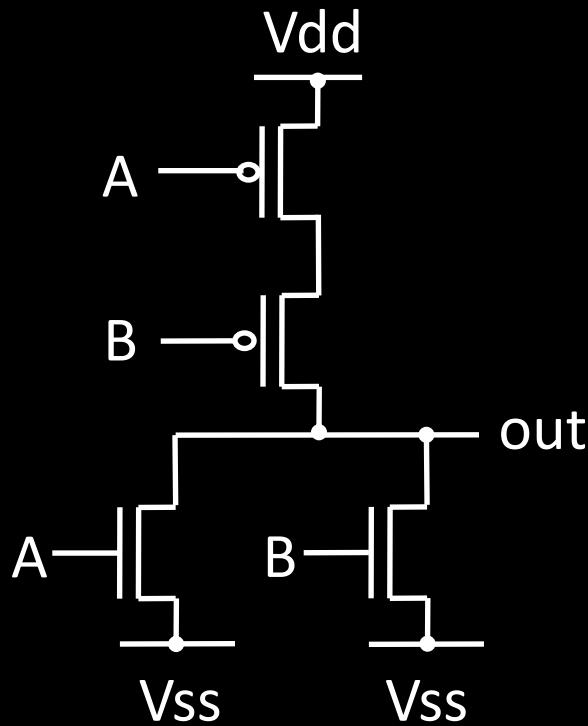

Function: NAND

- Symbol:

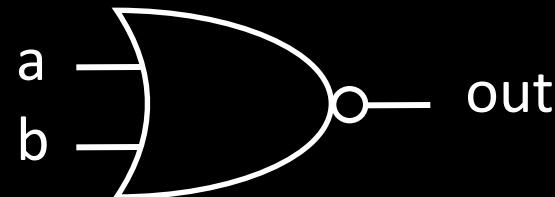

| A | B | out |
|---|---|-----|
| 0 | 0 | 1 |
| 0 | 1 | 1 |
| 1 | 0 | 1 |
| 1 | 1 | 0 |

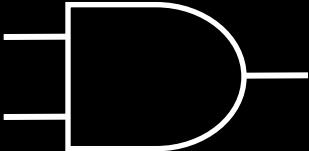

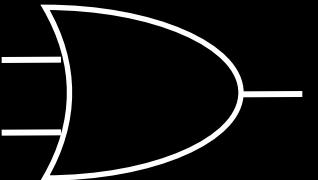

Function: NOR

- Symbol:

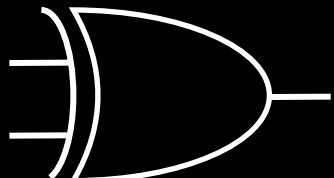

| A | B | out |
|---|---|-----|
| 0 | 0 | 1 |
| 0 | 1 | 0 |
| 1 | 0 | 0 |
| 1 | 1 | 0 |

- AND:A logic gate symbol for an AND function. It consists of a rectangle with two input lines entering from the left and one output line exiting to the right.
- OR:A logic gate symbol for an OR function. It consists of a trapezoid with two input lines entering from the left and one output line exiting to the right.
- NOT:A logic gate symbol for a NOT function. It consists of an inverted triangle with one input line entering from the left and one output line exiting from the bottom.

NAND is universal (so is NOR)

- Can implement any function with just NAND gates
 - De Morgan's laws are helpful (pushing bubbles)
- useful for manufacturing

E.g.: XOR (A, B) = A or B but not both ("exclusive or")

Proof: ?

Some notation:

- constants: true = 1, false = 0
- variables: a, b, out, ...
- operators:
 - AND(a, b) = $a \cdot b$ = $a \& b$ = $a \wedge b$
 - OR(a, b) = $a + b$ = $a | b$ = $a \vee b$
 - NOT(a) = \bar{a} = $\neg a$

Identities useful for manipulating logic equations

- For optimization & ease of implementation

$$a + 0 = a$$

$$a + 1 = 1$$

$$a + \bar{a} = 1$$

$$a \cdot 0 = 0$$

$$a \cdot 1 = a$$

$$a \cdot \bar{a} = 0$$

$$\overline{(a + b)} = \bar{a} \bar{b}$$

$$\overline{(a \cdot b)} = \bar{a} + \bar{b}$$

$$a + a \cdot b = a$$

$$a(b+c) = ab + ac$$

$$\overline{a(b+c)} = \bar{a} + \bar{b}\bar{c}$$

- functions: gates \leftrightarrow truth tables \leftrightarrow equations
- Example: $(a+b)(a+c) = a + bc$

| a | b | c | a+b | a+c | LHS | bc | RHS |
|---|---|---|-----|-----|-----|----|-----|
| 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 |
| 0 | 0 | 1 | 0 | 1 | 0 | 0 | 0 |
| 0 | 1 | 0 | 1 | 0 | 0 | 0 | 0 |
| 0 | 1 | 1 | 1 | 1 | 1 | 1 | 1 |
| 1 | 0 | 0 | 1 | 1 | 1 | 0 | 1 |
| 1 | 0 | 1 | 1 | 1 | 1 | 0 | 1 |
| 1 | 1 | 0 | 1 | 1 | 1 | 0 | 1 |
| 1 | 1 | 1 | 1 | 1 | 1 | 1 | 1 |
