

# CS4670/5670: Intro to Computer Vision

Noah Snavely

## Lecture 25: Introduction to Recognition

## What do we mean by “object recognition”?

Next 15 slides adapted from Li, Fergus, & Torralba's excellent [short course](#) on category and object recognition

Verification: is that a lamp?

Detection: are there people?

Identification: is that Potala Palace?

Object categorization

## Scene and context categorization

## Object recognition Is it really so hard?

Find the chair in this image

Output of normalized correlation

This is a chair

## Object recognition

### Is it really so hard?

Find the chair in this image

Pretty much garbage

Simple template matching is not going to make it

## Object recognition

### Is it really so hard?

Find the chair in this image

A "popular method is that of template matching, by point to point correlation of a model pattern with the image pattern. These techniques are inadequate for three-dimensional scene analysis for many reasons, such as occlusion, changes in viewing angle, and articulation of parts." Nivatia & Binford, 1977.

## Why not use SIFT matching for everything?

- Works well for object *instances*

- Not great for generic object *categories*

## Applications: Computational photography

[Face priority AE] When a bright part of the face is too bright

# Applications: Assisted driving

## Pedestrian and car detection

## Lane detection

- Collision warning systems with adaptive cruise control,
- Lane departure warning systems,
- Rear object detection systems,

# Applications: image search

### Places

[London](#)  
[New York](#)  
[Egypt](#)  
[Forbidden City](#)

### Celebrities

[Michael Jordan](#)  
[Angelina Jolie](#)  
[Halle Berry](#)  
[Seth Rogan](#)  
[Rihanna](#)

### Art

[impressionism](#)  
[Keith Haring](#)  
[cubism](#)  
[Salvador Dali](#)  
[pointillism](#)

### Shopping

[evening gown](#)  
[necklace](#)  
[shoes](#)

### Refine your image search with visual similarity

Similar Images allows you to search for images using pictures rather than words. Click the "Similar images" link under an image to find other images that look like it. Try a search of your own or click on an example below.

## How do human do recognition?

- We don't completely know yet
- But we have some experimental observations.

### Observation 1

- We can recognize familiar faces even in low-resolution images

## Observation 2:

Jim Carrey

Kevin Costner

- High frequency information is not enough

What is the single most important facial features for recognition?

## Observation 4:

- Image Warping is OK

The list goes on

**Face Recognition by Humans:  
Nineteen Results All Computer  
Vision Researchers Should  
Know About**

- [http://web.mit.edu/bcs/sinha/papers/19results\\_sinha\\_etal.pdf](http://web.mit.edu/bcs/sinha/papers/19results_sinha_etal.pdf)

## Let's start simple

- Today
  - skin detection
  - eigenfaces

## Face detection

- Do these images contain faces? Where?

## One simple method: skin detection

---

Skin pixels have a distinctive range of colors

- Corresponds to region(s) in RGB color space
  - for visualization, only R and G components are shown above

Skin classifier

- A pixel  $X = (R, G, B)$  is skin if it is in the skin region
- But how to find this region?
