

CS 5625

Advanced Interactive Graphics

Kavita Bala
Spring 2013

Information

- Instructor: Kavita Bala (kb@cs.cornell.edu)
- TAs:
 - Ivo Boyadzhiev, John DeCorato, Sean Ryan
- AA: Randy Hess
- CS 5625 Tu/Thu:
 - 10:10-11:25 (Hollister 110)
- Office hours: Tuesday (11:30-12:30)

Why this course?

- Topics
 - Graphics pipeline
 - Though not an architecture course
 - Core algorithms and techniques
 - Those that drive interactive graphics
 - So no off-line ray tracing
 - But could be
 - Hopefully, some GPGPU

Kavita Bala, Cornell University

What drives this explosion?

- CPUs/GPUs
 - Graphics processing Units
- Moore's Law and Beyond
 - Parallelism

Kavita Bala, Cornell University

Moore's Law

- 1965
 - number of transistors that can be integrated on a die would double every 18 to 24 months (i.e., grow exponentially with time).
- Amazingly visionary
 - 2300 transistors, 1 MHz clock (Intel 4004) - 1971
 - 16 Million transistors (Ultra Sparc III)
 - 42 Million transistors, 2 GHz clock (Intel Xeon) – 2001
 - 55 Million transistors, 3 GHz, 130nm technology, 250mm² die (Intel Pentium 4) – 2004
 - 290+ Million transistors, 3 GHz (Intel Core 2 Duo) – 2007

Kavita Bala, Cornell University

GPUs: Faster than Moore's Law

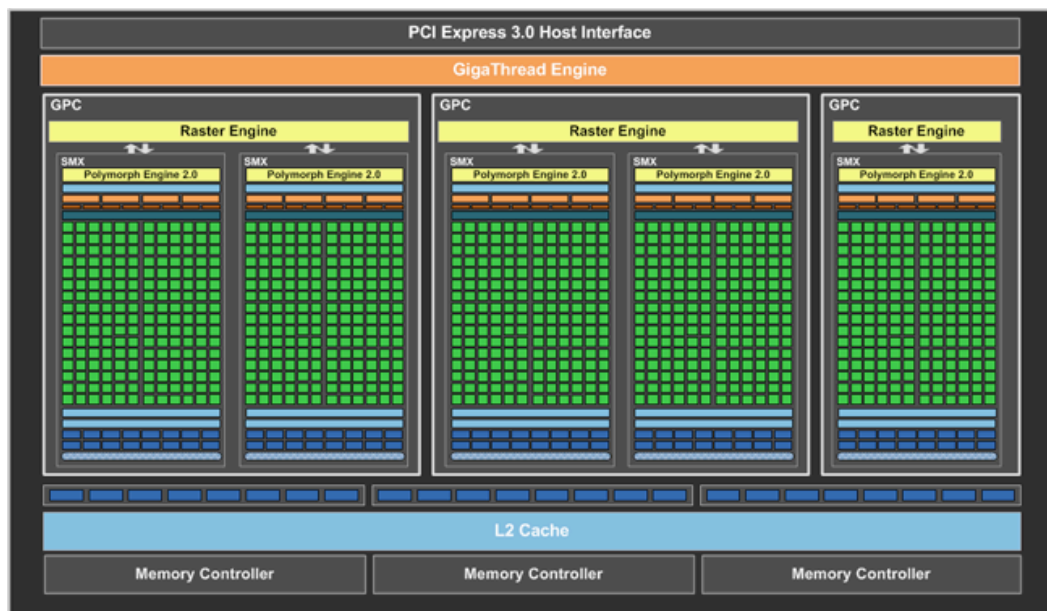

Kavita Bala, Cornell University

Why?

- Parallelism
- Pipelining

Kavita Bala, Cornell University

Kavita Bala, Cornell University

Graphics Pipeline: Brief History

The dark ages (early-mid 1990's), when there were only frame buffers for normal PC's.

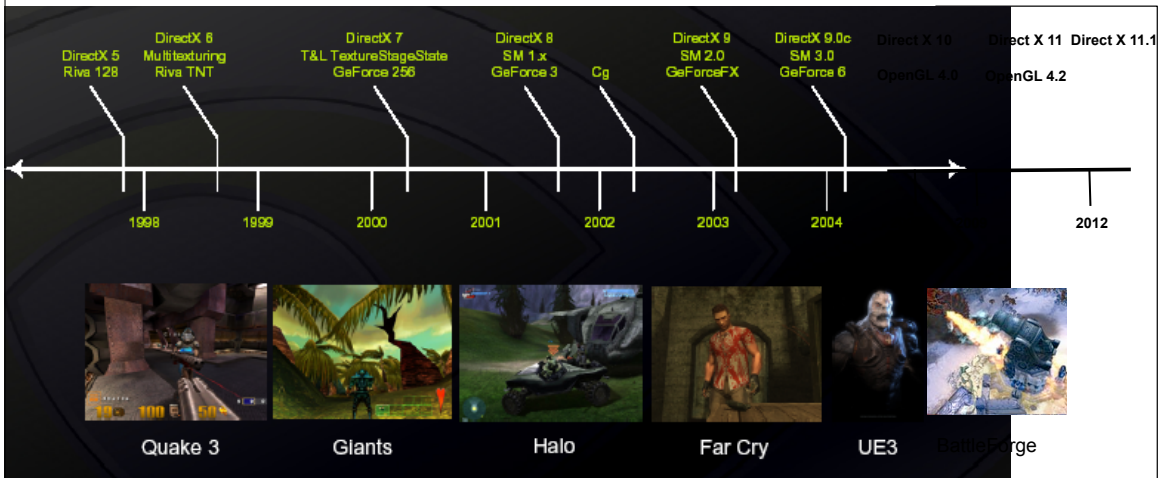

Some accelerators were no more than a simple chip that sped up linear interpolation along a single span, so increasing fill rate.

This is where pipelines start for PC commodity graphics, prior to Fall of 1999.

This part of the pipeline reaches the consumer level with the introduction of the NVIDIA GeForce256.

Hardware today is moving traditional application processing (surface generation, occlusion culling) into the graphics accelerator.

Kavita Bala, Cornell University

Kavita Bala, Cornell University

What is Graphics

- Generating images
- Modern Graphics Pipeline
- Create them
 - Modeling
 - Animating
 - Rendering
- Manipulate them
 - Image Processing
- Focus on Interactive Graphics

Kavita Bala, Cornell University

Pre-requisites

- Introductory graphics course
- Or instructor permission

Kavita Bala, Cornell University

Information

- www.cs.cornell.edu/courses/cs5625/2013sp/
 - Tentative schedule (very tentative)
 - Homeworks, lecture notes, will be on CMS
 - Check for updates and announcements

Kavita Bala, Cornell University

CS 5620

- 5 HW/PA (some parts alone, some in pairs)
- 2 prelims (definitely alone)
- Final project (in pairs)
 - Project proposal
 - Mid project evaluation
 - Final project demos, presentations, writeup

Kavita Bala, Cornell University

Academic Integrity

- Don't copy from Web
- Collaboration only when projects/homeworks are with groups
- Lots of detailed discussion is not ok
 - Need to come up with answers separately
 - When individual

Kavita Bala, Cornell University

Programming assignments

- Some combination of these concepts:
 1. Shading
 2. Texturing
 3. Shadows and Ambient Occlusion
 4. Subdivision Surfaces
 5. GPGPU

Kavita Bala, Cornell University

Recommended book

- Real-time Rendering
 - Akenine-Moller, Haines, Hoffman
 - Updates will be posted
 - Not required
- Online resources
 - Lot of them!

Kavita Bala, Cornell University

Other Policies

- Late policy
 - 3 free late days over the semester
 - Applies to all
 - Otherwise, 10% penalty per day for 5 days
 - Then 0 on an assignment
- AI (take this very seriously)

Kavita Bala, Cornell University

Final Project

Kavita Bala, Cornell University

Administrivia

- <http://www.cs.cornell.edu/courses/cs5625/2013sp>
 - Updates
 - Schedule
 - Lecture notes

Kavita Bala, Cornell University
