

1. Logical forms associated with some elementary trees

2. CCG: new formalism, (for now) similar intuitions. Result/Argument (arg to right) or Result \ Argument (arg to left)
Replace init trees (but keep associated LFs above) with:

3. Question: what should be the lexical entry (ignoring LF) for an intransitive verb, like "runs"?
do you think?
How about a transitive verb, like "buys"?
What about an adjective, like "green"?

4. Conjunctions (always tough for formalisms)

I	like	tags	and	ccgs
NP	(S\NP)/NP	NP	CONJ	NP

5. Example 16 from the "short intro" paper

I	dislike	and	Mary	likes	musicals
