HiQLab

Anchor losses
and disk
resonators

Thermoelastic
losses and
beam
resonators

Conclusion

Backup slides

- Micro-Electro-Mechanical Systems
 - Chemical, fluid, thermal, optical (MECFTOMS?)
- Applications:
 - Sensors (inertial, chemical, pressure)
 - Ink jet printers, biolab chips
 - Radio devices: cell phones, inventory tags, pico radio
- Use integrated circuit (IC) fabrication technology
- Tiny, but still classical physics

Resonant RF MEMS

MEMS and
models

HiQLab

Anchor losses
and disk
resonators

Thermoelastic
losses and
beam
resonators

Conclusion

Backup slides

Assume time-harmonic steady state, no external forces:

$$\begin{bmatrix} i\omega C + G & i\omega B \\ -B^T & \tilde{K} - \omega^2 M \end{bmatrix} \begin{bmatrix} \delta \hat{V} \\ \delta \hat{u} \end{bmatrix} = \begin{bmatrix} \delta \hat{l}_{\text{external}} \\ 0 \end{bmatrix}$$

Eliminate the mechanical terms:

$$\begin{aligned} Y(\omega) \delta \hat{V} &= \delta \hat{l}_{\text{external}} \\ Y(\omega) &= i\omega C + G + i\omega H(\omega) \\ H(\omega) &= B^T (\tilde{K} - \omega^2 M)^{-1} B \end{aligned}$$

Goal: Understand electromechanical piece ($i\omega H(\omega)$).

- As a function of geometry and operating point
- Preferably as a simple circuit

Damping and Q

Rice 08

Resonant
MEMS and
models

HiQLab

Anchor losses
and disk
resonators

Thermoelastic
losses and
beam
resonators

Conclusion

Backup slides

Designers want high *quality of resonance* (Q)

- Dimensionless damping in a one-dof system

$$\frac{d^2 u}{dt^2} + Q^{-1} \frac{du}{dt} + u = F(t)$$

- For a resonant mode with frequency $\omega \in \mathbb{C}$:

$$Q := \frac{|\omega|}{2 \operatorname{Im}(\omega)} = \frac{\text{Stored energy}}{\text{Energy loss per radian}}$$

To understand Q , we need damping models!

The Designer's Dream

Rice 08

Resonant
MEMS and
models

HiQLab

Anchor losses
and disk
resonators

Thermoelastic
losses and
beam
resonators

Conclusion

Backup slides

Ideally, would like

- Simple models for behavioral simulation
- Parameterized for design optimization
- Including all relevant physics
- With reasonably fast and accurate set-up

We aren't there yet.

Enter HiQLab

Rice 08

Resonant
MEMS and
models

HiQLab

Anchor losses
and disk
resonators

Thermoelastic
losses and
beam
resonators

Conclusion

Backup slides

- Existing codes do not compute quality factors
- ... and awkward to prototype new solvers
- ... and awkward to programmatically define meshes
- So I wrote a new finite element code: HiQLab

Heritage of HiQLab

Rice 08

Resonant
MEMS and
models

HiQLab

Anchor losses
and disk
resonators

Thermoelastic
losses and
beam
resonators

Conclusion

Backup slides

SUGAR: SPICE for the MEMS world

- System-level simulation using modified nodal analysis
- Flexible device description language
- C core with MATLAB interfaces and numerical routines

FEAPMEX: MATLAB + a finite element code

- MATLAB interfaces for steering, testing solvers, running parameter studies
- Time-tested finite element architecture
- But old F77, brittle in places

Other Ingredients

Rice 08

“Lesser artists borrow. Great artists steal.”
– Picasso, Dali, Stravinsky?

Resonant
MEMS and
models

HiQLab

Anchor losses
and disk
resonators

Thermoelastic
losses and
beam
resonators

Conclusion

Backup slides

- Lua: www.lua.org
 - Evolved from simulator data languages (DEL and SOL)
 - Pascal-like syntax fits on one page; complete language description is 21 pages
 - Fast, freely available, widely used in game design
- MATLAB: www.mathworks.com
 - “The Language of Technical Computing”
 - Good sparse matrix support
 - Star-P: <http://www.interactivesupercomputing.com/>
- Standard numerical libraries: ARPACK, UMFPACK

HiQLab Structure

Rice 08

- Standard finite element structures + some new ideas
- Full scripting language for mesh input
- Callbacks for boundary conditions, material properties
- MATLAB interface for quick algorithm prototyping
- Cross-language bindings are automatically generated

Conclusion

Backup slides

Perfectly Matched Layers

Rice 08

Resonant
MEMS and
models

HiQLab

Anchor losses
and disk
resonators

Thermoelastic
losses and
beam
resonators

Conclusion

Backup slides

- Complex coordinate transformation
- Generates a “perfectly matched” absorbing layer
- Idea works with general linear wave equations
 - Electromagnetics (Berengér, 1994)
 - Quantum mechanics – *exterior complex scaling* (Simon, 1979)
 - Elasticity in standard finite element framework (Basu and Chopra, 2003)

Model Problem

Rice 08

Resonant
MEMS and
models

HiQLab

Anchor losses
and disk
resonators

Thermoelastic
losses and
beam
resonators

Conclusion

Backup slides

- Domain: $x \in [0, \infty)$
- Governing eq:

$$\frac{\partial^2 u}{\partial x^2} - \frac{1}{c^2} \frac{\partial^2 u}{\partial t^2} = 0$$

- Fourier transform:

$$\frac{d^2 \hat{u}}{dx^2} + k^2 \hat{u} = 0$$

- Solution:

$$\hat{u} = c_{\text{out}} e^{-ikx} + c_{\text{in}} e^{ikx}$$

Model with Perfectly Matched Layer

Resonant
MEMS and
models

HiQLab

Anchor losses
and disk
resonators

Thermoelastic
losses and
beam
resonators

Conclusion

Backup slides

$$\frac{d\tilde{x}}{dx} = \lambda(x) \text{ where } \lambda(s) = 1 - i\sigma(s)$$

$$\frac{d^2 \hat{u}}{d\tilde{x}^2} + k^2 \hat{u} = 0$$

$$\hat{u} = c_{\text{out}} e^{-ik\tilde{x}} + c_{\text{in}} e^{ik\tilde{x}}$$

Model with Perfectly Matched Layer

Rice 08

Resonant
MEMS and
models

HiQLab

Anchor losses
and disk
resonators

Thermoelastic
losses and
beam
resonators

Conclusion

Backup slides

$$\frac{d\tilde{x}}{dx} = \lambda(x) \text{ where } \lambda(s) = 1 - i\sigma(s),$$

$$\frac{1}{\lambda} \frac{d}{dx} \left(\frac{1}{\lambda} \frac{d\hat{u}}{dx} \right) + k^2 \hat{u} = 0$$

$$\hat{u} = c_{\text{out}} e^{-ikx - k\Sigma(x)} + c_{\text{in}} e^{ikx + k\Sigma(x)}$$

$$\Sigma(x) = \int_0^x \sigma(s) ds$$

Model with Perfectly Matched Layer

Rice 08

Resonant
MEMS and
models

HiQLab

Anchor losses
and disk
resonators

Thermoelastic
losses and
beam
resonators

Conclusion

Backup slides

If solution clamped at $x = L$ then

$$\frac{c_{\text{in}}}{c_{\text{out}}} = O(e^{-k\gamma}) \text{ where } \gamma = \Sigma(L) = \int_0^L \sigma(s) ds$$

HiQLab

Anchor losses
and disk
resonators

Thermoelastic
losses and
beam
resonators

Conclusion

Backup slides

- Combine PML and isoparametric mappings

$$\mathbf{k}^e = \int_{\Omega^\square} \tilde{\mathbf{B}}^T \mathbf{D} \tilde{\mathbf{B}} \tilde{J} d\Omega^\square$$

$$\mathbf{m}^e = \int_{\Omega^\square} \rho \mathbf{N}^T \mathbf{N} \tilde{J} d\Omega^\square$$

- Matrices are *complex symmetric*

Eigenvalues and Model Reduction

Rice 08

Resonant
MEMS and
models

HiQLab

Anchor losses
and disk
resonators

Thermoelastic
losses and
beam
resonators

Conclusion

Backup slides

Want to know about the transfer function $H(\omega)$:

$$H(\omega) = B^T (K - \omega^2 M)^{-1} B$$

Can either

- Locate poles of H (eigenvalues of (K, M))
- Plot H in a frequency range (Bode plot)

Usual tactic: subspace projection

- Build an Arnoldi basis V for a Krylov subspace \mathcal{K}_n
- Compute with much smaller $V^* K V$ and $V^* M V$

Can we do better?

Variational Principles

Rice 08

Resonant
MEMS and
models

HiQLab

Anchor losses
and disk
resonators

Thermoelastic
losses and
beam
resonators

Conclusion

Backup slides

- Variational form for complex symmetric eigenproblems:
 - Hermitian (Rayleigh quotient):

$$\rho(v) = \frac{v^* K v}{v^* M v}$$

- Complex symmetric (modified Rayleigh quotient):

$$\theta(v) = \frac{v^T K v}{v^T M v}$$

- First-order accurate eigenvectors \implies
Second-order accurate eigenvalues.
- Key: relation between left and right eigenvectors.

Accurate Model Reduction

Rice 08

Resonant
MEMS and
models

HiQLab

Anchor losses
and disk
resonators

Thermoelastic
losses and
beam
resonators

Conclusion

Backup slides

- Build new projection basis from V :

$$W = \text{orth}[\text{Re}(V), \text{Im}(V)]$$

- $\text{span}(W)$ contains both \mathcal{K}_n and $\bar{\mathcal{K}}_n$
 \implies double digits correct vs. projection with V
- W is a real-valued basis
 \implies projected system is complex symmetric

Disk Resonator Simulations

Thermoelastic Damping (TED)

Rice 08

Resonant
MEMS and
models

HiQLab

Anchor losses
and disk
resonators

Thermoelastic
losses and
beam
resonators

Conclusion

Backup slides

Thermoelastic Damping (TED)

Rice 08

u is displacement and $T = T_0 + \theta$ is temperature

$$\sigma = C\epsilon - \beta\theta\mathbf{1}$$

$$\rho\ddot{u} = \nabla \cdot \sigma$$

$$\rho c_v \dot{\theta} = \nabla \cdot (\kappa \nabla \theta) - \beta T_0 \text{tr}(\dot{\epsilon})$$

- Coupling between temperature and volumetric strain:
 - Compression and expansion \implies heating and cooling
 - Heat diffusion \implies mechanical damping
 - Not often an important factor at the macro scale
 - Recognized source of damping in microresonators
- Zener: semi-analytical approximation for TED in beams
- We consider the fully coupled system

Resonant
MEMS and
models

HiQLab

Anchor losses
and disk
resonators

Thermoelastic
losses and
beam
resonators

Conclusion

Backup slides

Nondimensionalized Equations

Rice 08

Continuum equations:

$$\sigma = \hat{C}\epsilon - \xi\theta$$

$$\ddot{u} = \nabla \cdot \sigma$$

$$\dot{\theta} = \eta \nabla^2 \theta - \text{tr}(\dot{\epsilon})$$

Discrete equations:

$$M_{uu}\ddot{u} + K_{uu}u = \xi K_{u\theta}\theta + f$$

$$C_{\theta\theta}\ddot{\theta} + \eta K_{\theta\theta}\theta = -C_{\theta u}\dot{u}$$

- Micron-scale poly-Si devices: ξ and η are $\sim 10^{-4}$.
- Linearize about $\xi = 0$

Resonant
MEMS and
models

HiQLab

Anchor losses
and disk
resonators

Thermoelastic
losses and
beam
resonators

Conclusion

Backup slides

Perturbative Mode Calculation

Rice 08

Discretized mode equation:

$$\begin{aligned}(-\omega^2 M_{uu} + K_{uu})u &= \xi K_{u\theta}\theta \\ (i\omega C_{\theta\theta} + \eta K_{\theta\theta})\theta &= -i\omega C_{\theta u}u\end{aligned}$$

First approximation about $\xi = 0$:

$$\begin{aligned}(-\omega_0^2 M_{uu} + K_{uu})u_0 &= 0 \\ (i\omega_0 C_{\theta\theta} + \eta K_{\theta\theta})\theta_0 &= -i\omega_0 C_{\theta u}u_0\end{aligned}$$

First-order correction in ξ :

$$-\delta(\omega^2)M_{uu}u_0 + (-\omega_0^2 M_{uu} + K_{uu})\delta u = \xi K_{u\theta}\theta_0$$

Multiply by u_0^T :

$$\delta(\omega^2) = -\xi \left(\frac{u_0^T K_{u\theta}\theta_0}{u_0^T M_{uu}u_0} \right)$$

beam
resonators

Conclusion

Backup slides

What about:

- Modeling more geometrically complex devices?
- Modeling general dependence on geometry?
- Modeling general dependence on operating point?
- Computing nonlinear dynamics?
- Digesting all this to help designers?

Future Work

Rice 08

Resonant
MEMS and
models

HiQLab

Anchor losses
and disk
resonators

Thermoelastic
losses and
beam
resonators

Conclusion

Backup slides

- Code development
 - Structural elements and elements for different physics
 - Design and implementation of parallelized version
- Theoretical analysis
 - More damping mechanisms
 - Sensitivity analysis and variational model reduction
- Application collaborations
 - Use of nonlinear effects (quasi-static and dynamic)
 - New designs (e.g. internal dielectric drives)
 - Continued experimental comparisons

Conclusions

Rice 08

Resonant
MEMS and
models

HiQLab

Anchor losses
and disk
resonators

Thermoelastic
losses and
beam
resonators

Conclusion

Backup slides

- RF MEMS are a great source of problems
 - Interesting applications
 - Interesting physics (and not altogether understood)
 - Interesting computing challenges

Reflection Analysis

If $w^* A = 0$ and $Av = 0$ then

$$\delta(w^* Av) = w^*(\delta A)v$$

This implies

- If $A = A(\lambda)$ and $w = w(\nu)$, have

$$w^*(\nu)A(\rho(\nu))v = 0.$$

ρ stationary when $(\rho(\nu), \nu)$ is a nonlinear eigenpair.

- If $A(\lambda, \xi)$ and w_0^* and v_0 are null vectors for $A(\lambda_0, \xi_0)$,

$$w_0^*(A_\lambda \delta \lambda + A_\xi \delta \xi)v_0 = 0.$$

Hello world!

Reflection Analysis

Model discrete reflection as two parts:

- Far-end reflection (clamping reflection)
 - Approximated well by continuum calculation
 - Grows as $(k_x h)^{-1}$ grows
- Interface reflection
 - Discrete effect: mesh does not resolve decay
 - Does not depend on N
 - Grows as $(k_x h)^{-1}$ shrinks

Reflection Analysis

- Discrete reflection dominated by
 - Interface reflection when k_x large
 - Far-end reflection when k_x small
- Heuristic for PML parameter choice
 - Choose an acceptable reflection level
 - Choose β based on interface reflection at k_x^{\max}
 - Choose length based on far-end reflection at k_x^{\min}
