What do libraries do?
When you are asked to look up something relevant to your academic work...

Where do you go?
What are your perceptions of libraries and their roles in the web context?
A VERY Brief History of Libraries
• for over 5000 years cultures have established libraries whenever social, political, and economic developments have enabled them to record and collect knowledge.

• many different kinds of libraries developed by organizations such as kingdoms, churches, governments, universities, public, professional societies.

• also other libraries such as commercial lending libraries, subscription libraries, and other privately funded libraries.

• All libraries have been and are defined by their respective funding sources.

• Today’s discussion is primarily concerned with academic/scholarly libraries
  As distinct from public libraries
• Library organization was idiosyncratic until mid-19th century
  - shelves ordered by chronology of acquisition
  - shelf list major tool for discovery
• Libraries today are products of innovation that began ~150 years ago (Dewey).
  - notion of the catalog as distinct from the shelf list
  - organization of knowledge into taxonomic structure
A few concepts

- Libraries are integrated, coherent systems
  - multiple services
  - defined roles (external and internal)
- Like good infrastructure they are often invisible
- The act as intermediaries, transforming documents (data) into information
- Academic libraries have been a critical link in the support of scholarly works (works that make no unsupported assertions)
The Role of the Academic Library
Core functions of higher education

- teaching,

- research,

- dissemination of knowledge through publication,

- preservation of and access to the scholarly record in libraries.

http://www.mellon.org/programs/highered/libraries/Content.htm
The library is an information service whose primary role is to add value (increase access) to information resources for a specified community.

A primary concern of the academic library is making accessible for posterity information that is worthy of being preserved.
Library services add value and provide access by **selecting** and then

- collecting (acquisitions),
- organizing (cataloging)
- conserving,
- preserving, (stewardship)

information, knowledge, evidence, data discourse, and culture.
Library Services

delivery

- acquisition,
- circulation,
- ILL,
- preservation,
- systems

mediation

- cataloging,
- reference,
- collection development

http://campusgw.library.cornell.edu/

Both services have enabling technologies
Cornell University Library’s mission

• enhance campus vitality and scholarly productivity by:
  – providing a stable and reliable knowledge base
  – organizing information into meaningful and manageable forms
  – making available well-equipped and functional work places on campus
  – serving as a major cultural repository
• being the information resource of choice for the majority of the Cornell community
Library Social Ethic
What is the social ethic, purpose and objective of the organization (entity) that is doing the selection?

- Service not commerce
- Access enhancement not revenue production
Library Ideology (Traditional)

http://www.ala.org/ala/oif/statementspols/statementsif/librarybillrights.htm

Library Bill of Rights (1949)

The American Library Association affirms that all libraries are forums for information and ideas, and that the following basic policies should guide their services.

I. library resources should be provided for the interest, information, and enlightenment of all people of the community the library serves. Materials should not be excluded because of the origin, background, or views of those contributing to their creation.
-Library Bill of Rights (1949)

II. Libraries should provide materials and information presenting all points of view on current and historical issues. Materials should not be proscribed or removed because of partisan or doctrinal disapproval.

III. Libraries should challenge censorship in the fulfillment of their responsibility to provide information and enlightenment.
Library Ideology (Traditional)

http://www.ala.org/ala/oif/statementspols/statementsif/librarybillrights.htm

-Library Bill of Rights (1949)

IV. Libraries should cooperate with all persons and groups concerned with resisting abridgment of free expression and free access to ideas.
Library Bill of Rights (1949)

V. A person’s right to use a library should not be denied or abridged because of origin, age, background, or views.

Library Ideology (Traditional)

http://www.ala.org/ala/oif/statementspols/statementsif/librarybillrights.htm
Library Ideology (Traditional)

http://www.ala.org/ala/oif/statementspols/statementsif/librarybillrights.htm

-Library Bill of Rights (1949)

VI. Libraries which make exhibit spaces and meeting rooms available to the public they serve should make such facilities available on an equitable basis, regardless of the beliefs or affiliations of individuals or groups requesting their use.
Library Ideology (Modern) - Keystone Principles (1999)

http://www.arl.org/training/keystone.html

1. Access to Information as a Public Good

Scholarly and government information is a "public good" and must be available free of marketing bias, commercial motives, and cost to the individual user.
Library Ideology (Modern) - Keystone Principles (1999)

http://www.arl.org/training/keystone.html

2. Need for Bias-free Systems and for Libraries to Create These New Systems

Libraries are responsible for creating innovative information systems for the dissemination and preservation of information and new knowledge regardless of format.
Library Ideology (Modern) - Keystone Principles (1999)

http://www.arl.org/training/keystone.html

3. Affirm the Idea of the Library as a Nexus for Learning and the Sharing of Knowledge

The academic library is the intellectual commons for the community where people and ideas interact in both the real and virtual environments to expand learning and facilitate the creation of new knowledge.
The Library in the Web Age

• From physical to digital objects
  – Control
  – Preservation

• Economics
  – Human vs. machine effort
  – Scholarly communication “crisis”

• Googlization
  – “not online, not important”
  – User information perceptions

• Ethical Pressures
  – Patriot Act
