

# Lecture 2: Useful Tools and Cluster Warm-up (An Interactive Tutorial)

Nicolas Savva

28 Jan 2014

# Disclaimer

- ▶ Quick overview
  - ▶ nothing new for some...
  - ▶ overwhelming for others
- ▶ Similar information available on class wiki
- ▶ Be able to do HW0 with ease after today
- ▶ Please ask questions

# Logistics

- ▶ Everybody in the class should be on CMS by now  
<http://cms.csuglab.cornell.edu/web/guest>
- ▶ The enrollment cap has been increased to the room limit (several seats are available)
- ▶ If you cannot see the course under CMS or log in to the cluster please email us with your netID
- ▶ HW0 is out (due Tuesday Feb 4th)

# Today

- ▶ Connecting to the cluster
- ▶ Basic usage of the shell
- ▶ Version control
- ▶ Running and monitoring cluster jobs
- ▶ HW0 walkthrough
- ▶ More demos (if time permits)

# C4 cluster

- ▶ Rocks linux cluster (V6.1)

<http://www.rocksclusters.org/wordpress/>  
Heterogeneous nodes

- ▶ HTCondor scheduler (v7.8.5)

<http://research.cs.wisc.edu/htcondor/>  
use to submit and monitor jobs on cluster

- ▶ Ganglia activity monitor

<http://c4.coecis.cornell.edu/ganglia/>

# C4 cluster machines

en-cluster02.coecis.cornell.edu

**Head node (dual Xeon X5672 @ 3.20GHz)**

## ssh access to cluster

- ▶ Use a Terminal under OS X or Linux
- ▶ PuTTY or Cygwin for windows
- ▶ Authenticate with Cornell NetID and password  
*ssh netID@c4.coecis.cornell.edu*

# Terminal prompt

- ▶ Type the following for a one-off initialization:

```
/share/cs-instructional/cs5220/script/setup.sh
```

*This appends commands to `.bashrc` and `.bash_profile` to automatically set a class-related environment every time you log in.*

# Customize the prompt

Google customize \$PS1  
add your version to the .bashrc file

```
export $PS1 = ...
```

```
\u username
```

```
\h hostname
```

```
\pwd working directory path
```

```
\n new line
```

## Some bash commands

ls	w	chmod	ssh
cd	ps	export	scp
pwd	jobs	set	tar
mkdir	fg	alias	vi
rmdir	bg	exit	nano
mv	kill	history	which
cp	Ctrl + C		man
grep	Ctrl + Z	find	echo

. .. > » < « &

If you are not particularly familiar with the above please check out the following tutorial :

<http://software-carpentry.org/v4/shell/>

## For more details

- ▶ *The UNIX programming environment*  
by Kernighan & Pike

`http://cornell.worldcat.org/title/  
unix-programming-environment/`

- ▶ *Learning the bash shell*  
by Newham & Rosenblatt

`http://cornell.worldcat.org/title/  
learning-the-bash-shell/`

Both are available through the Cornell library

# Version Control Systems (VCS)

- ▶ Why version control?
  - ▶ Keep revision history
  - ▶ Easy way to share files between machines
  - ▶ More effective collaboration
  - ▶ (Remote) backup

# VCS - many flavors

- ▶ Distributed
  - ▶ Git
  - ▶ Mercurial (Hg)
  - ▶ Bazaar
  - ...
- ▶ Client-server
  - ▶ Subversion (SVN)
  - ▶ CVS
  - ...

# Repositories - Host projects online

- ▶ Bitbucket (Mercurial or Git)
- ▶ Github (Git)
- ▶ Launchpad (Bazaar)
- ▶ Google Code (SVN, Mercurial or Git)
- ▶ Microsoft CodePlex (SVN, Mercurial or Git)
- ▶ Sourceforge (CVS, SVN, Bazaar, Git or Mercurial)
- ▶ Cornell Forge (SVN) - <http://forge.cornell.edu>

# Bitbucket

- ▶ **Class repository and wiki are hosted on Bitbucket:**

<https://bitbucket.org/dbindel/cs5220-s14/>

**Sign up for a free account**

- ▶ **Git tutorial**

<https://www.atlassian.com/git/tutorial>

- ▶ **Pro Git book**

<http://git-scm.com/documentation>

- ▶ **Git (Interactive) Cheat Sheet**

<http://ndpsoftware.com/git-cheatsheet.html>

- ▶ **Git commands overview**

[https://www.atlassian.com/dms/wac/images/landing/git/atlassian\\_git\\_cheatsheet.pdf](https://www.atlassian.com/dms/wac/images/landing/git/atlassian_git_cheatsheet.pdf)

# Making a local copy

- ▶ Clone the class repository

```
git clone https://bitbucket.org/dbindel/cs5220-s14.git
```

The folder cs5220-s14 now contains local copy

# Git basics demo

- ▶ git clone
- ▶ git add
- ▶ git diff
- ▶ git commit
- ▶ git log
- ▶ git remote
- ▶ git pull
- ▶ git push

Please look at the cheat sheet and tutorials for more functionality

# Graphical Interfaces available

- ▶ **EGit (Git with Eclipse IDE)**  
`http://www.eclipse.org/egit/`
- ▶ **Subclipse (SVN with Eclipse)**  
`http://subclipse.tigris.org/`
- ▶ **SourceTree (Git and Mercurial GUI under Windows or Mac)**  
`http://www.sourcetreeapp.com/`
- ▶ **TortoiseSVN, TortoiseHg, TortoiseGit... series (mostly Windows)**

# Eclipse PTP (Parallel Tools Platform)

- ▶ IDE for developing parallel applications
- ▶ Support MPI, OpenMP, UPC
- ▶ Parallel debugger
- ▶ Various profiling tools
- ▶ Some issues running on c4 cluster
- ▶ Experiment with it on your own machine
- ▶ Please don't use PTP remotely on c4 right now

<http://www.eclipse.org/ptp/>

# Using HTCondor

- ▶ `condor_status [-claimed -avail -master -verbose]`
- ▶ `condor_q [ -analyze -run -hold]`
- ▶ `condor_submit`
- ▶ `condor_hold`
- ▶ `condor_release`
- ▶ `condor_rm`
- ▶ `condor_history [ -backwards -forwards -match]`

[ -constraint -format ]

# HTCondor CS5220 wrapper scripts

- ▶ csub (serial submissions)
- ▶ mpisub (Message Passing Interface)
- ▶ upcsub (Unified Parallel C)
- ▶ ompsub (OpenMP: Open Multi-Processing)

<https://bitbucket.org/dbindel/c4-pkg>

# Environment modules

Make it easy to install:

- ▶ different versions of software packages
- ▶ software packages that might conflict
  
- ▶ module list
  
- ▶ module avail
  
- ▶ module load  
module add
  
- ▶ module unload  
module rm

https:

[//bitbucket.org/dbindel/cs5220-s14/wiki/modules](https://bitbucket.org/dbindel/cs5220-s14/wiki/modules)

# Homework 0 walkthrough

## Steps:

- ▶ Clone class repo
- ▶ membench
- ▶ membench with ClassAd requirements
- ▶ HTCondor job management
- ▶ pinfo
- ▶ Retrieve the results (using sftp or scp)

<http://bitbucket.org/dbindel/cs5220-s14/wiki/HW0>

## Additional Demos...
