

```
def count_non_space_chars(myList):  
    """Returns: number of non-space characters in the strings in myList.  
    Example: count_non_space_chars(['U', 'r', ', ' gr8']) returns 5  
    Precondition: myList is a list of strings. Each string in myList can  
    contain only spaces, letters, digits."""
```

6

```
def inflate(myList, p_percent):  
    """Inflate each number in myList by p_percent while maintaining the  
    type (int or float). For any int in myList, round down the inflation.  
    Precondition: myList is a list of positive numbers (int and/or float).  
    Precondition: p_percent is a positive number (int or float)."""
```

9

## Constructing test cases

---

```
def before_space(s):  
    """Returns: the substring before the first space character in string s.  
    Precondition: string s contains at least one space."""
```

Come up with at least three *distinct* test cases. Write the test input, expected output, and rationale.

11

```
def move(r, xc, yc):  
    """Set the attributes of Rect `r` such that its center lies on the x- and  
    y-coordinates `xc` and `yc`, respectively.  
    Precondition: r is a Rect object.  
    Precondition: xc, yc are each a float."""
```
