

Relational Big Data

How Data Collection Influences How
We Live, Work, and Interact

Karen Levy
Cornell University

Social and legal dimensions of surveillance and data collection

How do we negotiate our relationships through information flow/restriction?

What's the relationship between privacy and socioeconomic justice?

How do people resist data collection, and what purposes does it serve?

What's big about “big data”?

- Computational power
- Velocity/volume/variety
- New methods

Data mediate our social relationships to an unprecedented degree – “relational” big data

- the workplace
- the family
- marginalized communities

Surveillance at work

New types of data capture

The diagram shows three stylized human figures in a conversation. The central figure is a woman with her arms raised, gesturing. She is wearing a white rectangular badge on a lanyard. The two figures on either side are men, shown in profile, facing the woman. They are also wearing similar white rectangular badges. The background is a solid dark grey. Three teal-colored callout boxes with white text are positioned below each figure, pointing to specific aspects of their interaction. The overall style is clean and modern, using simple shapes and a limited color palette.

WHAT DATA THE SOCIOMETRIC BADGES COLLECT

**WHEN PEOPLE
ARE TALKING AND

New information flows

Truck crash prediction

Now, consider the Omnitrac Analytics industry model for accident prediction.

They took driver logs and turned each one into about a thousand distinct data points—from the amount of time the truck driver drove each hour of the day, to how many hours of sleep that driver got and when those hours occurred, to how many times that driver drove through sunrise.

Then, they took 27,000 severe accidents from their customers' data sets and reverse engineered a severity model, which allowed them to identify predictive data points in a particular driver logbook that indicated the potential for a bad wreck.

The model is so good they can take any driver's log book and predict the likelihood of a bad accident each hour of his or her day.

Technology to Enhance Lone Worker Protection

Each year, more than 23 million U.S. citizens work alone and in high-risk environments. Every day these "lone workers" suffer serious injury and death from workplace accidents, falls, assaults, and robberies. These incidents cost companies billions each year in lost productivity, lawsuits, insurance premium increases, and medical payments.

“Disconnecting often makes it worse. Clients are much more at risk when they actually separate from their abusers because he suddenly no longer has any control over that victim. So often the only thing left is through the phone[.] ... If you change your number, now he’s most likely going to go crazy. So that’s when he’s going to start stalking you any way he can.”

VIRGINIA EUBANKS JANUARY 15, 2014

Civil Rights Principles for the Era of Big Data

Technological progress should bring greater safety, economic opportunity, and convenience to everyone. And the collection of new types of data is essential for documenting persistent inequality and discrimination. At the same time, as new technologies allow companies and government to gain greater insight into our lives, it is vitally important that these technologies be designed and used in ways that respect the values of equal opportunity and equal justice. We aim to:

Search

[Follow @ACM_Ethics](#)

Draft 3 was developed by The Code 2018 Task Force. (It is based on the [2018 ACM Code of Ethics and Professional Conduct: Draft 2](#)).

1. GENERAL MORAL PRINCIPLES.

A computing professional should...

1.1 Contribute to society and to human well-being, acknowledging that all people are stakeholders in computing.

This principle, concerning the quality of life of all people, affirms an obligation of computing professionals to use their skills for the benefit of society, its members, and the environment surrounding them. This obligation includes promoting fundamental human rights and protecting each individual's right to autonomy in day-to-day decisions. An essential aim of computing professionals is to minimize negative consequences of computing, including threats to health, safety, personal security, and privacy.

Computing professionals should consider whether the results of their efforts respect diversity, will be used in socially responsible ways, will meet social needs, and will be broadly accessible. They are encouraged to actively contribute to society by engaging in pro bono or volunteer work. When the interests of multiple groups conflict, the needs of the least advantaged should be given increased attention and priority.
