CS473 Practicum in Artificial Intelligence
Fall 1999
Preliminary Project Proposals

Due Date: Due Wednesday, October 6, at the beginning of CS472 class time.

Format: The proposal should contain four sections:

1. a clear, concise description of what you plan to do,
2. the general approach you'll use (e.g., heuristic search, learning, rules, belief networks)
3. an explicit, coherent plan for quantitatively and/or qualitatively evaluating the system
4. a time line for your implementation

The proposal should not be more than about two pages in length. If you'd like a partner for the project and haven't found one, indicate this somewhere on the proposal.

Proposals will be graded Satisfactory/Unsatisfactory based on the clarity and believability of the three above components.

Proposals can be modified for content in response to my comments/suggestions.

NOTE: (1) email me at selman@cs.cornell.edu if you'd like some feedback on early ideas. (2) Check R&N for chapters related to your project.
