## CS5760: Computer Vision Noah Snavely

## Lecture 8: Image alignment

http://www.wired.com/gadgetlab/2010/07/camera-software-lets-you-see-into-the-past/

## Reading

- Szeliski: Chapter 6.1

## Announcements

- Project 2 due date extended to Wednesday, 3/6 (code due at 11:59pm to CMS)
- Artifact due Friday, 3/8
- Quiz 2 in class next Wednesday, $3 / 6$

## Project 1 Artifact Prizes

Trived OPace

## Siqi Ouyang

Qecond SPace

## Ishan Virk

## Jingjing Bai

## Computing transformations

- Given a set of matches between images $A$ and $B$ - How can we compute the transform $T$ from $A$ to $B$ ?

- Find transform T that best "agrees" with the matches

## Computing transformations

## Simple case: translations

How do we solve for

## Simple case: translations

$$
\begin{gathered}
\text { Displacement of match } i=\left(\mathbf{x}_{i}^{\prime}-\mathbf{x}_{i}, \mathbf{y}_{i}^{\prime}-\mathbf{y}_{i}\right) \\
\left(\mathbf{x}_{t}, \mathbf{y}_{t}\right)=\left(\frac{1}{n} \sum_{i=1}^{n} \mathbf{x}_{i}^{\prime}-\mathbf{x}_{i}, \frac{1}{n} \sum_{i=1}^{n} \mathbf{y}_{i}^{\prime}-\mathbf{y}_{i}\right)
\end{gathered}
$$

## Another view

$$
\begin{aligned}
\mathbf{x}_{i}+\mathbf{x}_{\mathbf{t}} & =\mathbf{x}_{i}^{\prime} \\
\mathbf{y}_{i}+\mathbf{y}_{\mathbf{t}} & =\mathbf{y}_{i}^{\prime}
\end{aligned}
$$

- System of linear equations
- What are the knowns? Unknowns?
- How many unknowns? How many equations (per match)?

## Another view

$$
\begin{aligned}
\mathbf{x}_{i}+\mathbf{x}_{\mathbf{t}} & =\mathbf{x}_{i}^{\prime} \\
\mathbf{y}_{i}+\mathbf{y}_{\mathbf{t}} & =\mathbf{y}_{i}^{\prime}
\end{aligned}
$$

- Problem: more equations than unknowns
- "Overdetermined" system of equations
- We will find the least squares solution

## Least squares formulation

- For each point $\left(\mathbf{x}_{i}, \mathbf{y}_{i}\right)$

$$
\begin{aligned}
\mathbf{x}_{i}+\mathbf{x}_{\mathbf{t}} & =\mathbf{x}_{i}^{\prime} \\
\mathbf{y}_{i}+\mathbf{y}_{\mathbf{t}} & =\mathbf{y}_{i}^{\prime}
\end{aligned}
$$

- we define the residuals as

$$
\begin{aligned}
r_{\mathbf{x}_{i}}\left(\mathbf{x}_{t}\right) & =\left(\mathbf{x}_{i}+\mathbf{x}_{t}\right)-\mathbf{x}_{i}^{\prime} \\
r_{\mathbf{y}_{i}}\left(\mathbf{y}_{t}\right) & =\left(\mathbf{y}_{i}+\mathbf{y}_{t}\right)-\mathbf{y}_{i}^{\prime}
\end{aligned}
$$

## Least squares formulation

- Goal: minimize sum of squared residuals
$C\left(\mathbf{x}_{t}, \mathbf{y}_{t}\right)=\sum_{i=1}^{n}\left(r_{\mathbf{x}_{i}}\left(\mathbf{x}_{t}\right)^{2}+r_{\mathbf{y}_{i}}\left(\mathbf{y}_{t}\right)^{2}\right)$
- "Least squares" solution
- For translations, is equal to mean (average) displacement

## Least squares formulation

- Can also write as a matrix equation

$$
\begin{aligned}
& {\left[\begin{array}{cc}
1 & 0 \\
0 & 1 \\
1 & 0 \\
0 & 0 \\
0 & 1 \\
\vdots \\
\vdots & 0 \\
1 & 0 \\
0 & 1
\end{array}\right]\left[\begin{array}{c}
x_{t} \\
y_{t}
\end{array}\right]=\left[\begin{array}{c}
x_{1}^{\prime}-x_{1} \\
y_{1}^{\prime}-y_{1} \\
x_{2}^{\prime}-x_{2} \\
y_{2}^{\prime}-y_{2} \\
\vdots \\
x_{n}^{\prime}-x_{n} \\
y_{n}^{\prime}-y_{n}
\end{array}\right]} \\
& \underset{2 n \times 2}{\mathbf{A}} \underset{2 \times 1}{\mathbf{t}}=\underset{2 n \times 1}{\mathbf{b}}
\end{aligned}
$$

## Least squares

$$
\mathbf{A t}=\mathbf{b}
$$

- Find $\mathbf{t}$ that minimizes

$$
\|\mathbf{A t}-\mathbf{b}\|^{2}
$$

- To solve, form the normal equations

$$
\begin{gathered}
\mathbf{A}^{\mathrm{T}} \mathbf{A} \mathbf{t}=\mathbf{A}^{\mathrm{T}} \mathbf{b} \\
\mathbf{t}=\left(\mathbf{A}^{\mathrm{T}} \mathbf{A}\right)^{-1} \mathbf{A}^{\mathrm{T}} \mathbf{b}
\end{gathered}
$$

## Questions?

## Least squares: linear regression

## Linear regression

$\operatorname{Cost}(m, b)=\sum_{i=1}^{n}\left|y_{i}-\left(m x_{i}+b\right)\right|^{2}$

## Linear regression

$\left[\begin{array}{cc}x_{1} & 1 \\ x_{2} & 1 \\ \vdots & \\ x_{n} & 1\end{array}\right]\left[\begin{array}{c}m \\ b\end{array}\right]=\left[\begin{array}{c}y_{1} \\ y_{2} \\ \vdots \\ y_{n}\end{array}\right]$

## Affine transformations

$$
\left[\begin{array}{l}
x^{\prime} \\
y^{\prime} \\
1
\end{array}\right]=\left[\begin{array}{lll}
a & b & c \\
d & e & f \\
0 & 0 & 1
\end{array}\right]\left[\begin{array}{l}
x \\
y \\
1
\end{array}\right]
$$

- How many unknowns?
- How many equations per match?
- How many matches do we need?

## Affine transformations

- Residuals:

$$
\begin{aligned}
r_{x_{i}}(a, b, c, d, e, f) & =\left(a x_{i}+b y_{i}+c\right)-x_{i}^{\prime} \\
r_{y_{i}}(a, b, c, d, e, f) & =\left(d x_{i}+e y_{i}+f\right)-y_{i}^{\prime}
\end{aligned}
$$

- Cost function:
$C(a, b, c, d, e, f)=$

$$
\sum_{i=1}^{n}\left(r_{x_{i}}(a, b, c, d, e, f)^{2}+r_{y_{i}}(a, b, c, d, e, f)^{2}\right)
$$

## Affine transformations

- Matrix form

$$
\left.\left.\begin{array}{r}
{\left[\begin{array}{cccccc}
x_{1} & y_{1} & 1 & 0 & 0 & 0 \\
0 & 0 & 0 & x_{1} & y_{1} & 1 \\
x_{2} & y_{2} & 1 & 0 & 0 & 0 \\
0 & 0 & 0 & x_{2} & y_{2} & 1 \\
& & \vdots & & \\
& \\
x_{2 n \times 6} & y_{n} & 1 & 0 & 0 & 0 \\
0 & 0 & 0 & x_{n} & y_{n} & 1
\end{array}\right]}
\end{array} \begin{array}{c}
{\left[\begin{array}{c}
a \\
b \\
c \\
d \\
e \\
f
\end{array}\right]}
\end{array}\right]=\begin{array}{c}
x_{1}^{\prime} \\
y_{1}^{\prime} \\
x_{2}^{\prime} \\
y_{2}^{\prime} \\
\vdots \\
x_{n}^{\prime} \\
y_{n}^{\prime}
\end{array}\right]
$$

## Homographies

To unwarp (rectify) an image

- solve for homography $\mathbf{H}$ given $\mathbf{p}$ and $\mathbf{p}^{\prime}$
- solve equations of the form: wp' $=\mathbf{H p}$
- linear in unknowns: w and coefficients of $\mathbf{H}$
- H is defined up to an arbitrary scale factor
- how many points are necessary to solve for $\mathbf{H}$ ?

## Solving for homographies

$$
\begin{aligned}
& {\left[\begin{array}{c}
x_{i}^{\prime} \\
y_{i}^{\prime} \\
1
\end{array}\right] \cong\left[\begin{array}{lll}
h_{00} & h_{01} & h_{02} \\
h_{10} & h_{11} & h_{12} \\
h_{20} & h_{21} & h_{22}
\end{array}\right]\left[\begin{array}{c}
x_{i} \\
y_{i} \\
1
\end{array}\right]} \\
& x_{i}^{\prime}=\frac{h_{00} x_{i}+h_{01} y_{i}+h_{02}}{h_{20} x_{i}+h_{21} y_{i}+h_{22}} \\
& y_{i}^{\prime}=\frac{h_{10} x_{i}+h_{11} y_{i}+h_{12}}{h_{20} x_{i}+h_{21} y_{i}+h_{22}}
\end{aligned}
$$

Not linear!
$x_{i}^{\prime}\left(h_{20} x_{i}+h_{21} y_{i}+h_{22}\right)=h_{00} x_{i}+h_{01} y_{i}+h_{02}$ $y_{i}^{\prime}\left(h_{20} x_{i}+h_{21} y_{i}+h_{22}\right)=h_{10} x_{i}+h_{11} y_{i}+h_{12}$

## Solving for homographies

$$
\begin{aligned}
x_{i}^{\prime}\left(h_{20} x_{i}+h_{21} y_{i}+h_{22}\right) & =h_{00} x_{i}+h_{01} y_{i}+h_{02} \\
y_{i}^{\prime}\left(h_{20} x_{i}+h_{21} y_{i}+h_{22}\right) & =h_{10} x_{i}+h_{11} y_{i}+h_{12}
\end{aligned}
$$

$$
\left[\begin{array}{ccccccccc}
x_{i} & y_{i} & 1 & 0 & 0 & 0 & -x_{i}^{\prime} x_{i} & -x_{i}^{\prime} y_{i} & -x_{i}^{\prime} \\
0 & 0 & 0 & x_{i} & y_{i} & 1 & -y_{i}^{\prime} x_{i} & -y_{i}^{\prime} y_{i} & -y_{i}^{\prime}
\end{array}\right]\left[\begin{array}{l}
h_{00} \\
h_{01} \\
h_{02} \\
h_{10} \\
h_{11} \\
h_{12} \\
h_{20} \\
h_{21} \\
h_{22}
\end{array}\right]=\left[\begin{array}{l}
0 \\
0
\end{array}\right]
$$

## Solving for homographies

$$
\left[\begin{array}{ccccccccc}
x_{1} & y_{1} & 1 & 0 & 0 & 0 & -x_{1}^{\prime} x_{1} & -x_{1}^{\prime} y_{1} & -x_{1}^{\prime} \\
0 & 0 & 0 & x_{1} & y_{1} & 1 & -y_{1}^{\prime} x_{1} & -y_{1}^{\prime} y_{1} & -y_{1}^{\prime} \\
x_{n} & y_{n} & 1 & 0 & 0 & 0 & -x_{n}^{\prime} x_{n} & -x_{n}^{\prime} y_{n} & -x_{n}^{\prime} \\
0 & 0 & 0 & x_{n} & y_{n} & 1 & -y_{n}^{\prime} x_{n} & -y_{n}^{\prime} y_{n} & -y_{n}^{\prime}
\end{array}\right]\left[\begin{array}{c}
h_{00} \\
h_{01} \\
h_{02} \\
h_{10} \\
h_{11} \\
h_{12} \\
h_{20} \\
h_{21} \\
h_{22}
\end{array}\right]=\left[\begin{array}{c}
0 \\
0 \\
\vdots \\
0 \\
0
\end{array}\right]
$$

Defines a least squares problem: minimize $\|A h-0\|^{2}$

- Since $\mathbf{h}$ is only defined up to scale, solve for unit vector $\hat{\mathbf{h}}$
- Solution: $\hat{\mathbf{h}}=$ eigenvector of $\mathbf{A}^{T} \mathbf{A}$ with smallest eigenvalue
- Works with 4 or more points

## Recap: Two Common Optimization Problems

## Problem statement

$$
\text { minimize }\|\mathbf{A x}-\mathbf{b}\|^{2}
$$

least squaressolution to $\mathbf{A x}=\mathbf{b}$

## Solution

$$
\begin{aligned}
\mathbf{x} & =\left(\mathbf{A}^{T} \mathbf{A}\right)^{-1} \mathbf{A}^{T} \mathbf{b} \\
\mathbf{x} & =\mathbf{A} \backslash \mathbf{b} \text { (matlab) }
\end{aligned}
$$

## Problem statement

## Solution

$$
\begin{gathered}
{[\mathbf{v}, \lambda]=\operatorname{eig}\left(\mathbf{A}^{T} \mathbf{A}\right)} \\
\lambda_{1}<\lambda_{2 . n}: \mathbf{x}=\mathbf{v}_{1}
\end{gathered}
$$

non - trivial lsq solution to $\mathbf{A x}=0$

## Questions?

## Image Alignment Algorithm

Given images $A$ and $B$

1. Compute image features for $A$ and $B$
2. Match features between $A$ and $B$
3. Compute homography between $A$ and $B$ using least squares on set of matches

What could go wrong?

## Outliers

## outliers
