
Project Proposal

Due: September 14, 11:59pm on CMS

Please submit a short proposal describing your project. The proposal must be **in PDF format and up to one page** in length. You may complete the project (and proposal and presentations) in groups of two, but working alone is fine. Your proposal must include the following:

- Description and motivation of your task
 - If your task is multi-disciplinary (e.g., language+vision), describe what aspects of language will play a role
- Description and motivation of your technique and method
- Brief discussion of related work that inspired you and/or justifies your approach
- Discussion of feasibility given available resources (relying on prior work is valid)
- Identification of at least one corpus you will use (more is better!)
 - If you plan to collect data, describe the process and do a quick feasibility study

It is recommended that you use examples and figures to illustrate the problem and your approach. Keep in mind the relatively short time available (less than one semester) when considering the feasibility of your project. We will have mid-term and final presentations in class. You will also submit a final report in the form of a short ACL paper (4 pages in ACL format + unlimited pages for references).

If you are uncertain about your topic, please email yoav@cs as soon as possible.

Using your research, if relevant to the topic of the course, for your project is acceptable and even recommended. If your research project's scope is beyond a single semester, please identify intermediate goals to complete for this project.
