Acknowledgments ix
Mathematical Facts xi
Preface xvii

1	From Formula to Program	1
1.1	A Small Example	2
1.2	Sines and Cosines	10
1.3	Max's and Min's	15
1.4	Formulas that Involve Integers	19
2	Numerical Exploration	25
2.1	Discovering limits	26
2.2	Confirming Conjectures	35
2.3	The Floating Point Terrain	39
2.4	Interactive Frameworks	45
3	Elementary Graphics	49
3.1	Grids	49
3.2	Rectangles and Ovals	59
3.3	Granularity	67
4	Sequences	75
4.1	Summation	76
4.2	Recursions	83
5	Random Simulations	89
5.1	Generating Random Reals and Integers	89
5.2	Estimating Probabilities and Averages	96
5.3	Monte Carlo	101
6	Fast, Faster, Fastest	103
6.1	Benchmarking	103
6.2	Efficiency	108

7	Exponential Growth	115
7.1	Powers 116	
7.2	Binomial Coefficients 127	
8	Patterns	137
8.1	Encapsulation 137	
8.2	Hierarchy 145	
9	Proximity	161
9.1	Distance 162	
9.2	Inclusion 169	
9.3	Collinearity 174	
10	Roots	181
10.1	Quadratic Equations 182	
10.2	The Method of Bisection 188	
10.3	The Method of Newton 193	
11	Area	201
11.1	Triangulation 201	
11.2	Tiling 206	
11.3	Integration 210	
12	Encoding Information	215
12.1	Notation and Representation 215	
12.2	Place Value 224	
13	Visualization	235
13.1	Exploratory Environments 235	
13.2	Coordinate Systems 246	

14	Points in the Plane	259
14.1	Centroids	260
14.2	Max's and Min's	272
15	Tables	287
15.1	Set-Up	288
15.2	Plotting	294
15.3	Efficiency Issues	300
15.4	Look-Up	310
16	Divisors	317
16.1	The Prime Numbers	317
16.2	The Apportionment Problem	325
17	The Second Dimension	331
17.1	" <i>ij</i> " Thinking	332
17.2	Operations	342
17.3	Tables in Two Dimensions	349
17.4	Bit Maps	353
18	Polygons	359
18.1	Points	359
18.2	Line Segments	371
18.3	Triangles and Rectangles	376
18.4	<i>N</i> -gons	379
19	Special Arithmetics	385
19.1	The Extra Long Integer	386
19.2	The Rational	392
19.3	The Complex	397

20 Polynomials **405**

- 20.1 Representation and Operations 405
- 20.2 Evaluation 415
- 20.3 Quotients 418

21 Permutations **423**

- 21.1 Shifts and Shuffles 424
- 21.2 Sorting 427
- 21.3 Representation 443

22 Optimization **449**

- 22.1 Shortest Path 450
- 22.2 Best Design 458
- 22.3 Smallest Ellipse 465

23 Divide and Conquer **475**

- 23.1 Recursion vs. Iteration 476
- 23.2 Repeated Halving 480
- 23.2 Mesh Refinement 489

24 Models and Simulation **499**

- 24.1 Prediction and Intuition 500
- 24.2 The Effect of Dimension 510
- 24.3 Building Models from Data 517

Appendix I: Synopsis of Think Pascal Units **529**

Index **555**
